## World news

### French police in court siege

French police were negotiating with gunmen who took about 30 hostages in a raid on an armed robbery trial in the western port of Nantes.

A Moslem militant burst into the courtroom where three people were on trial, fired several shots and passed guns to the defendants.

A television crew was allowed inside and film of the gunmen in court was broadcast live. Seventeen of the hostages were later released, and the armed men had apparently made no demands.

### Afghan impasse

The impasse over the withdrawal of Soviet troops from Afghanistan remains unresolved after three days of negotiations in Geneva between Afghan and Pakistani delegates, despite the hopes raised by the Reagan-Gorbachev summit meeting.

### New Delhi protest

Indian police detained about 20,000 people and fired tear gas to break up demonstrators marching on the Parliament in New Delhi against a peace agreement in the northern Punjab state.

### Philippine poll ruling

The Philippine Supreme Court ruled that legislation calling for a presidential election was constitutional and polling could go ahead on February 7.

### Strikes hit flights

A hunger strike by pilots grounded all Olympic Airways flights. French air traffic controllers are to strike today, halting many flights over France. A go-slow by flight technicians is disrupting flights through Oslo.

### Shuttle grounded

The US space shuttle Columbia's launch was halted 15 seconds before takeoff. The mission was postponed until after Christmas.

### Financier 'threatened'

Spanish financier Jose Ruiz Mateos, founder of the expropriated Rumasa group, has been moved to a new cell after reports of a plot to kill him.

### Irish hunger strike

An Irish Republican jailed in Belfast for murder refused food and started what is expected to be a new wave of hunger strikes in Northern Ireland.

### Spain breaks ring

Spanish police said they had broken up a ring of currency smugglers, led by a retired police officer and a businessman, which had spirited Ptas 700m (\$44m) out of the country.

### Argentine trains stop

Train services throughout Argentina stopped when 100,000 railway workers started a 48-hour strike for better pay and social benefits.

### Lisbon ferry strike

Thousands of commuters in Lisbon were delayed when crews of the ferries which carry rail passengers across the River Tagus began a two-day strike to demand negotiations over work categories.

### Sweden gives asylum

Sweden will let two teenage brothers who fled from Poland stay despite objections by Warsaw.

### Dear Santa

Santa Claus's expenses rose only slightly, to \$6bn, this year, the US magazine *Everyone's Money* calculated. It included \$10 in gifts for each child under six, pay for 100 elves, and one day's travel insurance for reindeer.

## Business summary

### India sets agenda for economic revival

INDIA launched a long-term fiscal policy aimed at boosting tax revenue and industrial confidence as part of Premier Rajiv Gandhi's overall economic reforms. Page 18.

### WALL STREET: The Dow Jones industrial average closed 1.48 up at 1,543.92. Page 38

LONDON: Equities maintained their better trend while gilts were mixed. The FT Ordinary share index gained 10.3 to 1,114.9 and the FTSE 100 added 11.9 to 1,390.7. Page 38.

### TOKYO: Stocks made a late rally. The Nikkei average added 12.69 to 13,115.03. Page 38

COFFEE futures prices continued upwards on concern about the effect of drought on Brazilian crops. In London the March price ended trading 74 higher at £2,525 a tonne, the highest second position close for more than eight years. Page 30.

DOLLAR fell in London to DM 2.5180 (DM 2.5175) and ¥202.90 (¥203.10). It rose to FF 7.7235 (FF 7.7125) and Sfr 2.1150 (Sfr 2.1135). Page 31.

STERLING rose 10 points against the dollar in London to close at \$1.421. It was unchanged at DM 3.575 and rose to Sfr 3.005 (Sfr 3.0) and FF 10.975 (FF 10.9625). On Bank of England figures, the pound's exchange rate index closed at 77.9 from 78.8. Page 31.

GOLD rose \$5.50 in the London bullion market to close at \$325.75. It also rose in Zurich to \$325.75 from \$319.70. In New York the Comex February settlement was \$327.20. Page 30.

THE BANK OF ENGLAND says in its latest quarterly bulletin that UK wage behaviour is "out of line" with that of other industrial countries and that a fundamental change in attitudes is now required. Page 8.

CAPITAL SPENDING in the US is expected to decline in 1986 by about 1 per cent in real terms, bringing to an end the strong investment upswing of the past two years, the Commerce Department reported. Page 4.

GRAND METROPOLITAN, UK brewing, hotels and leisure group, reported a £12m (£11m) rise in full-year taxable profits to £367.2m. See Page 18; Details, Page 22.

GENERAL MOTORS of the US appointed Paul Tosch to succeed fellow American J.T. Battenberg III as chief executive of its Bedford UK commercial vehicles arm. Page 8.

ERICSSON, Swedish telecommunications concern, is to replace Hakan Ledin as chief executive of its troubled US subsidiary. Page 19.

MITEL, Canadian telecommunications equipment maker saw losses go to C\$14m (US\$10m) from C\$4.3m a year ago. See Page 16; Details, Page 18.

## UK unveils plans for overhaul of investor protection

BY JOHN MOORE AND PETER RIDDELL IN LONDON

NEW MEASURES designed to curb fraud, theft, and deception in London's financial community were announced yesterday by the UK Government. A financial Services Bill containing the most comprehensive overhaul of investor protection regulatory structures in years has been published.

Mr Leon Brittan, Secretary of State for Trade and Industry, said yesterday that the Bill was designed to create a system of regulation "which is both flexible and inspires confidence in issuers and investors that the financial services sector is a 'clean' place to do business."

"While the Bill builds on the tradition of self-regulation it ensures that self-regulation has the teeth and the statutory backing it needs to be effective," Mr Brittan said. However, the Bill was attacked yesterday for being inadequate to the task of tackling City of London fraud by both the Labour and Alliance parties. It was given a cautious initial welcome by most interested Tory MPs.

The key test will come during the House of Commons committee stage following the second reading debate on January 14, when Labour Party spokesmen will seek cross-

party alliance with Tory backbenchers to strengthen the Bill and to bring the investment aspects of Lloyd's within its scope.

In the proposed shake-up, one main board for City of London supervision is to be created with wide-ranging powers transferred to it by Mr Brittan. This board, yet to be named, will regulate about 15,000 investment businesses. It will become a criminal offence for investment businesses in the UK to operate unless they have gained au-

thorisation from the new regulatory structure.

The board will be responsible for commodity futures, securities, collective investments, and life insurance marketing. The regulated firms will range from small insurance brokers to the largest City of London conglomerates, including a significant number of major foreign houses operating in London.

In other moves yesterday, an original plan to create two main bodies for City of London regulation was abandoned. The Securities and Investments Board, designed to regulate the securities industry, and the organising committee which was working on the creation of a Marketing of Investments Board - designed to cover the marketing of unit trusts and life assurance - are to merge.

In a series of controversial moves yesterday, the British Government resisted political pressure to include the Lloyd's insurance market in the legislation.

The system under which Lloyd's is currently regulated has been in

## Rival Westland rescue package expected today

BY LIONEL BARBER AND BRIDGET BLOOM IN LONDON

A CONSORTIUM of five European aerospace manufacturers is expected to unveil a rival rescue plan for Westland, Britain's sole helicopter manufacturer, today, Mr Christopher Morgan, a spokesman for Lloyd's Merchant Bank, which is advising the consortium, said last night.

The decision to press ahead with the rival plan came after a four-hour meeting in London yesterday involving senior executives of British Aerospace, Agusta of Italy, MBB of West Germany, Aerospa of France, and GEC, Britain's largest industrial company. Lloyd's Merchant Bank and its lawyers would be working through the night ironing out the final details.

Last night's meeting followed immediately after Sir John Cuckney, Westland's chairman, confirmed de-

tails of a £70m (\$99.5m) rescue plan involving Sikorsky, the US helicopter maker, and Fiat of Italy.

Sir John said Westland had come "perilously close to receivership" in recent weeks but the new partnership would restore Westland's finances and ensure "the medium and long-term viability of the company."

In the House of Commons yesterday, Mrs Margaret Thatcher, the British Prime Minister, issued a rebuke to her Defence Secretary, Mr Michael Heseltine, over his support for a European solution to Westland's difficulties instead of the Sikorsky/Fiat package preferred by the company.

Under the rescue plan, Sikorsky and Fiat will inject £20m into Westland in return for a 29.9 per cent equity stake, including preference

shares. Westland's bankers have agreed to convert £22m debt into preference shares, and a further £10m rights issue priced at 50p per share is being offered to existing shareholders, raising £4.2m.

Sir John said last night: "Any alternative offer to the present one must be better or it will not be considered."

Westland yesterday revealed a pre-tax loss of £95.3m after exceptional provisions of £106.6m, for the year to September 30, 1985. A heavy chunk of the write-offs covers the 30 helicopters which have failed to find a market.

## Soviet plan for N-test site inspections rejected by US

BY STEWART FLEMING IN WASHINGTON

THE WHITE HOUSE yesterday rejected Soviet proposals to permit some inspection of its nuclear test sites provided the US agreed to a moratorium on nuclear testing.

In a statement issued following the publication of the Soviet proposal, Mr Larry Speakes, the White House spokesman, said that the question of verification of nuclear testing "is an issue quite separate from that of a moratorium on nuclear explosions."

He maintained that a comprehensive test ban was an issue which had to be linked not merely to the question of verification, but to the much broader range of arms control negotiations.

"A comprehensive test ban... is a long-term objective of the US in the context of achieving broad, deep and verifiable arms reductions, substantially improved verification capabilities, expanded confidence building measures (and) greater balance in conventional forces."

Explaining the US position, Mr Speakes left no doubt that a signifi-

cant factor was the US desire to continue nuclear tests.

"Nuclear weapons will remain for the foreseeable future the key element of our deterrent. In such a situation, where the US and our allies must rely upon nuclear weapons to deter aggression, nuclear testing will be required," he said.

The US response echoes its stance earlier this year when the Soviet Union proposed a test moratorium. Then a senior Administration official cited Soviet non-compliance with arms control agreements in the past as one reason for the US decision to reject the proposal for a test ban.

Instead, the US invited Soviet officials to send observers to monitor US tests to increase mutual confidence.

The Soviet initiative was announced in the Communist Party daily Pravda. The Soviet Union has had its own moratorium on testing since July but this is due to end at the beginning of 1986 unless Washington agrees to a testing ban.

Pravda says that in the past the

West, and the US in particular, had said that a ban on nuclear testing could not be verified. In order to remove doubts about compliance with a moratorium the Soviet Union is now prepared to accept "certain measures of on-site verification," the paper says.

The Soviet action is the first practical proposal for nuclear arms control by either of the superpowers since the Geneva summit. Moscow had not previously accepted the presence of foreign observers on its soil to verify compliance.

Mr Mikhail Gorbachev, the Soviet leader, this week told Dr Bernard Lown, the Nobel peace prize winner and campaigner against nuclear arms, that the Soviet Union would accept "the most effective verification" of a test ban. He also said that in the US "hawks have set out to prevent the implementation of the Geneva accords, to disrupt or at the very least make another Soviet-American summit look cheap."

## OECD forecasts continuing economic recovery

By Philip Stephens, Economics Correspondent, in Paris

THE Organisation for Economic Co-operation and Development yesterday voiced optimism that the present economic recovery in industrialised nations would continue in 1987 and said that the risks of a "crash landing" had diminished.

Its latest six-monthly Economic Outlook said that recent sharp fall in the value of the dollar, a favourable inflation outlook, and the US initiative on Third World debt all pointed to brighter prospects for the world economy.

The organisation predicted that the annual rate of growth among its 24 member countries would average between 2½ and 3 per cent over the next 18 months, while inflation would remain stable or perhaps fall slightly.

The OECD is considerably more confident of sustained recovery than in its last report in June, when it warned that the large imbalances building up in the world economy because of the US budget deficit could wreck the upturn.

Introducing the report yesterday, Mr David Henderson, the head of the OECD's Economics and Statistics Department, said there were still risks to the recovery.

The current account deficit of the US would reach nearly \$150bn next year, and the surpluses of Japan and West Germany about \$80bn and \$20bn respectively.

"The imbalances problem still needs to be addressed via policies that would sustain and strengthen the effects of the recent dollar correction. This means action on the US budget," he said.

Mr Henderson also emphasised that the pace of growth now envisaged would not be enough to make any significant dent in the unemployment rate, which is expected to remain at more than 8 per cent in the OECD as a whole, and at 11 per cent in Europe.

The Outlook, however, welcomes the greater international co-operation signalled by the Group of Five agreement to intervene against the dollar and by the initiative proposed by Mr James Baker, the US Treasury Secretary, to ease the Third World debt crisis.

It suggests that European governments should respond to action by the US to cut its budget deficit by using the scope afforded by lower US interest rates to ease their monetary policies.

The OECD also welcomes the slightly less stringent fiscal stance expected in Japan and West Germany.

## Bundesbank to allow issue of D-Mark CDs

BY JONATHAN CARR IN FRANKFURT

THE BUNDESBANK has at last agreed to allow the issue of D-Mark certificates of deposit (CDs) to help to enhance the attraction of West German financial markets against foreign competition.

In a related move, the Bundesbank's policy-making central council also decided yesterday to relax its stringent minimum reserve rules. Both steps will take effect in "a few months" when technical details have been resolved.

The action, announced by Mr Karl Otto Pöhl, the Bundesbank president, will give banks in Germany access to an extra financial instrument and will increase funds available to them by about DM 8bn (\$3.17bn).

But it does not go as far as most banks were hoping and might even bring a court action against the Bundesbank from credit institutions unhappy about aspects of the new provisions.

CDs, which in effect are tradable receipts for short-term bank deposits, are widely used throughout the financial world, but have not so far been allowed in West Germany.

Even when the Bundesbank gave the green light for other financial innovations from last May, it excluded CDs on grounds that their use might endanger monetary policy control.

It was agreed that CDs, unlike bank liabilities such as savings deposits, did not fall under the rules governing minimum reserves, the sums the banks must deposit interest-free with the Bundesbank.

After months of debate, the central bank has now decided to admit CDs after all - but to draw them into its (modified) minimum reserve regulations.

At the same time, it will include in minimum reserves similar bearer paper that has escaped so far. That step angers public-sector banks, which particularly rely on such paper for refinancing, and they may challenge the central bank's decision in the courts.

Mr Pöhl commented that such a court case would be an odd way to repay the Bundesbank, which was seeking to cut the burden on the banks of minimum reserves without giving up the control instrument altogether.

He said that, for one thing, the Bundesbank would reduce overall reserve "ratios" - the percentage of liabilities the banks must deposit with the central bank - which have not been changed since 1982.

Moreover, the Bundesbank would in future largely exempt non-resident deposits in foreign currencies from minimum reserve rules. These two steps together would release for the use of the banks some DM

8bn which would otherwise be tied up at the Bundesbank.

However, the banks have been pressing for a much larger cut, from the current level in minimum reserves of DM 48bn to around DM 25bn (the amount in "working balances" they need at the Bundesbank to cover daily payments transactions).

The banks say the sum held in minimum reserves represents "misplaced resources," and that if it were released, they might be able to pass on lower lending rates to their customers.

They also argue that the minimum reserve instrument has fallen into disuse, and that the Bundesbank now makes far greater use of openmarket operations to control monetary policy.

Despite those criticisms, the Bundesbank action marks another step to liberalise Germany's financial markets.

The moves began with the Government's decision in autumn 1984 to abolish coupon tax - which foreigners used to have to pay on the interest they received from German domestic bonds. It continued in the spring of this year when the Bundesbank gave its approval (if not its blessing) to instruments such as floating-rate notes (FRNs) and zero-coupon bonds.

Mr Pöhl noted, however, that one big obstacle remained: the stock-exchange turnover tax, which imposes a levy on securities transactions in Germany.

Because of that tax, the secondary market in German-issued FRNs has gone abroad, mainly to London, and it is expected that initially the same thing will happen to D-Mark CDs.

Mr Martin Bangemann, the Economics Minister, who attended the Bundesbank council meeting, noted that in principle the Government wanted to abolish the turnover tax. But he indicated that that would not happen in the current legislative period (to the end of 1986).

Meanwhile, the Bundesbank has also slightly raised its target range for money-supply growth in 1986 to allow for stronger economic growth without encouraging inflation.

The new range agreed by the central bank council yesterday is from 3.5 per cent to 5.5 per cent, compared with one of 3 per cent to 5 per cent this year.

The Bundesbank has had marked success (and its officials agree some luck) in keeping money-supply growth this year to 4.6 per cent - comfortably within the prearranged corridor.

Next year, the outlook is for stronger economic growth of over 3 per cent in real terms.

## EUROPEAN NEWS

## German stock exchanges approve reform

By Jonathan Carr in Frankfurt

WEST GERMANY'S eight regional stock exchanges have approved a plan to boost their co-ordination and efficiency in the face of growing competition from abroad.

The green light came, after months of fierce debate, at a meeting near Frankfurt yesterday of senior representatives of the eight exchanges.

Among the changes planned is the upgrading of the exchanges working group to an association with a permanent base (in Frankfurt) and a president.

The new body will take over tasks presently duplicated by the eight markets, handle legal issues and seek to present a "united front" to the outside world.

Despite yesterday's agreement, which was said to have been unanimous, there are still fears among the smaller exchanges about the growing prominence of the two biggest - Frankfurt and Düsseldorf.

It is proposed that the voting weight of the exchanges within the new association be determined by the size of their turnover last year.

This would give Frankfurt and Düsseldorf together more than 80 per cent of the vote.

## Nato chief criticises Greeks and Danes

BY ROBERT MAUTHNER, DIPLOMATIC CORRESPONDENT, IN LONDON

LORD CARRINGTON, the Nato Secretary-General, yesterday unusually directly criticised two members of the Alliance - Greece and Denmark - whose nuclear policies conflict with those of the US and most of its allies.

Lord Carrington, who has lately made a number of speeches criticising the anti-nuclear lobbies in Nato member-countries, told armed forces commanders in Karlsruhe, West Germany, that Greek and Danish defence policies posed questions for the Alliance.

Those questions arose when Greece joined a group of neutrals and non-aligned countries to address the Soviet Union and the US on security issues, or when a majority of the Danish Parliament (Folketing) dissociated itself from elements of allied strategy.

Greece and Denmark both oppose the deployment of US medium-range missiles in Europe, while Greece has joined Sweden, India and some other countries

in calling for a nuclear weapons freeze and a nuclear test ban.

Lord Carrington also emphasised that consultation within the Alliance should be a two-way street. Europeans should be just as ready to consult on defence policies with the US, as the Americans were to consult the Europeans.

The Nato Secretary-General was particularly critical of the waste and duplication in Western arms procurement and said it was "high time that a lot more people got a lot more angry."

"Angry that there are four different main battle tanks - which cannot even use the same ammunition - lined up to fight the same battle in the same place on the same day."

"Angry that we cannot reliably identify our own aircraft; angry that we cannot defend our own bases; and angry that being able to talk to the chap next door seems to be regarded as an optional extra - and an expensive one at that - by people who design our communications systems."

## Honecker says SDI move will strain relations

By Leslie Collitt in Berlin

EAST GERMANY and the Soviet Union yesterday criticised the Bonn Government's decision to begin talks with the US on a framework agreement for West German companies to participate in research for the Strategic Defence Initiative (SDI).

Mr Erich Honecker, the East German leader, told visiting West German Social Democrat politicians the move would "strain relations" between East and West Germany.

A similar warning was given after West Germany in late 1983 permitted the deployment of new US medium-range missiles on its territory. Bonn's relations with East Germany were not affected but the Soviet Union reduced its political contact with West Germany while continuing to give it priority in trade relations.

The Soviet news agency Tass said the West German decision was a "dangerous choice" but did not indicate any consequences. It noted that the decision was a "formal one" after Chancellor Helmut Kohl had called participation morally justified and politically necessary.

## Commission likely to increase venture capital scheme funds

BY WILLIAM DAWKINS

THE EUROPEAN Commission is likely to decide next month to allocate more money to an Ecu 2.7m (£1.6m) scheme to stimulate trans-national venture capital investment within the Community.

If the funding is agreed, this will be the second time that the Commission has earmarked more cash for the Innovation Finance Project, launched last March with an initial budget of Ecu 1.2m. Demand was far stronger than expected, with the result that the money ran out last month, when the Commission agreed to inject another Ecu 1.5m into the project.

Under the project, recently re-named the Venture Consort, the Commission agrees to invest up to 30 per cent of the equity content of any technology related proposal syndicated internationally between members of the European Venture Capital Association.

It was taken by surprise, said Dr Neil Cross, vice-chairman of the association and assistant general manager of

Si (Investors in Industry). "It is not easy to encourage cross-border investments."

The scheme is a response by the Commission to anxieties that small businesses in Europe find it harder to grow than their US counterparts because the national barriers they face make their markets smaller and more fragmented. "If you can get people to co-operate in innovative venture capital projects across national boundaries, it helps them to look at the European market," said Dr Cross.

The commission's investment is limited to Ecu 200,000 per venture, a figure which Dr Cross said would be raised to Ecu 300,000 in January. If a venture in the scheme fails, the commission will write off its investment. It will donate to the syndicate concerned half the gains due to its holdings in profitable ventures as an extra incentive for making trans-national investments.

So far, 11 businesses have received a combined total of Ecu 2.2m under the scheme,

representing a total investment including the private syndicates' portion of Ecu 24.2m. The remaining Ecu 500,000 is expected to be used up quickly in the New Year. There is no doubt that this has been a catalyst," said Dr Cross.

The largest venture to have received backing under the scheme is European Silicon Structures, the \$65m custom microchip start-up company now in the final stages of raising finance from a syndicate of industrial and venture capital investors. Others include a computer aided design project with Dutch and UK investors, a British and Belgian-backed biotechnology venture and a producer of a new kind of insulation supported by equity from West Germany and Luxembourg.

The scheme was formed after a Commission proposal for a European Innovation Loan (Venture Consort) at the end of last year by the UK and West Germany.

## Danish party hints it may reject reforms

By Hilary Barnes in Copenhagen

DENMARK'S OPPOSITION Social Democratic Party, which holds the key to the country's approval or rejection of the EEC reforms, agreed yesterday to a summit seems to be leaning towards rejection. "There are more disadvantages than advantages," in the reform package, Mr Ivar Forgaard, the party's EEC affairs spokesman, said here.

The proposal to increase the influence of the European Parliament, the issue the party finds most unacceptable.

It is expected that the Social Democratic parliamentary group will make its decision at a group meeting planned for January 5. This will be followed by a full-scale debate in Parliament shortly after it returns from the Christmas recess on January 14. Mr Uffe Ellemann-Jensen, Foreign Minister, has said

meanwhile that the Government will not "here and now" make acceptance of the reform package an issue of confidence, but he said that rejection would have an influence on whether Denmark in the longer term remains a member of the EEC.

## Study abroad to be encouraged

BY OUR BRUSSELS CORRESPONDENT

THE EUROPEAN Commission yesterday set out on a scheme to have ten times as many students studying in countries other than their own by 1992. At the moment only one in a hundred does, less than in the sixteenth century.

The greater part of the budget would go on providing fellowships for mobile students and on subsidising universities. The Commission wants to establish a network of universities, 1,700 by 1989 - to underpin the system.

There is a very high degree of support at governmental and institutional level for programmes of this kind," Mr

Sutherland said, adding that he hoped the Council would approve the scheme in June next year.

An accompanying document released yesterday proposes grants and tax incentives to encourage the development of the Community's forests. It points out that efforts to curb farm production give further incentives to farmers to find other uses for land. At present, the EEC is the world's largest wood importer, purchasing Ecu 17bn (£18bn) worth from abroad in 1984.

There is a very high degree of support at governmental and institutional level for programmes of this kind," Mr

## Equality plan endorsed

BY OUR BRUSSELS CORRESPONDENT

THE EUROPEAN Commission yesterday endorsed a five-year programme aimed at promoting equality of opportunities for women throughout the 12-member EEC, writes Ivo Dawany in Brussels. The paper, covering the period 1986-1990, includes plans for a legal measure to reverse the burden of proof of discrimination from the plaintiff to the defendant. It also aims to tighten the application of existing rules, particularly to ensure that equal rights regulations are properly included in national law.

## Nordic group seeks freer capital movement

BY KEVIN DONE AND OLLI VIRTANEN IN HELSINKI

A GROUP of leading Nordic industrialists and bankers yesterday called on Scandinavian governments to liberalise capital movements in the region and harmonise regulations governing the export of services as part of a campaign to strengthen the Nordic economies.

The 10-man group, which has been modelled on the Round Table of European Industrialists, has also taken several of its own initiatives, including the establishment in Oslo of a Nordic venture capital fund, Euroventures Nordica.

The groups, whose report was presented yesterday to the Nordic prime ministers meeting here, is to form a consortium with its head office in Copenhagen to push for the building of the so-called Scandinavian Link. This would provide for improved direct road and rail links between Scandinavia and continental Europe. It involves the building of road and rail connections over the Store Baelt to link the Danish island of Zealand to the Continent, and across the Øresund to link Sweden to Denmark.

The consortium is willing to put up private financing schemes if governments do not want to carry this burden in national budgets.

Among the industrialists in the group are the chairmen or chief executives of Volvo and Asea in Sweden, Norsk Hydro and Christiania Bank of Norway, United Breweries in Denmark and NOKIA in Finland.

Nordic governments agreed earlier this year on road and rail improvements but the much more ambitious bridge and tunnel links have so far failed to win backing in the Danish and Swedish parliaments.

The group says that dismantling remaining "walls" between the Scandinavian countries would help create more dynamic growth in trade and industry in the region. It calls for legislation to give the legal basis for creating transnational Nordic companies and to give domestic status to citizens and companies in all four countries.

Other action the group would like to see is the removal of a series of trade barriers, including differing technical

standards, subsidies to unprofitable companies, soft credits in trade between the Nordic countries and differing terms and conditions for intra-Nordic trade.

Euroventures Nordica will have an initial capital of Nkr 125m (£11.4m) and will be backed from the outset by United Breweries in Denmark, Nette, NOKIA and Wartsila in Finland, Norsk Hydro in Norway and Volvo, Asea and Procordia in Sweden.

Leading companies in the region are asked to give their "back" to Nordic Industrial Development Trust to be based in Trondheim and aimed at increasing the economic co-operation between Scandinavian countries.

## Polish deputies attack system of subsidies

By Chris Bobinski in Warsaw

THE DEBATE in Poland's Parliament on next year's budget to be approved in open session on Monday has revealed a group of deputies ready to speak out against present financial policies, which are falling to stem an ever growing budget deficit.

The criticism of the deputies, who were elected in national elections last October, is aimed at the practice of increasing subsidies to inefficient companies, while heavily taxing thriving producers.

The thrust of the argument in closed sessions as well as open debate by speakers such as Mr Wladyslaw Szymanski, an economist from the Peasant Party, is that such policies run counter to Poland's decentralising reforms which are being stifled by the financial squeeze on companies showing a profit.

"We are saving away at the very branch we are sitting on by doing this," Mr Wladyslaw Szymanski, another deputy warned. The deficit, which shows that the underlying state of the economy remains poor and which is in itself a major inflationary factor, is growing.

This runs counter to the three year plan which ends this year and which decreed that the budget be balanced by 1985.

Instead the deficit this year is to reach Zl 125bn (\$833m) and grow to Zl 181bn next year.

This was the figure it reached in 1981. It then fell to Zl 25bn in 1983 and climbed to Zl 68bn in 1984.

The deputies, fortified by a recent report from the Government's Chamber of Control (NIK), which showed that subsidies are being paid to ailing industries without any guarantees of improvement in performance, have been arguing for cuts in subsidies and greater control over their implementation.

Subsidies to the tune of some Zl 2,000bn or half of next year's budget spending are to be paid out in 1986.

Under pressure in committee Mr Stanislaw Nieckarz, the Finance Minister, said that tougher policies would mean a price explosion and the implied threat of social unrest.

He also defended increased taxes on company profits by arguing that without these measures next year's deficit would be three times higher than already planned.

## Comecon agrees joint high-tech programme

BY DAVID BUCHAN IN LONDON

THE SOVIET Union and its nine Communist partners in Comecon have agreed on a joint 15-year programme to modernise their high-technology industries and to close their gap with the West.

The communiqué, announcing the agreement at the end of a two-day meeting of Comecon country prime ministers in Moscow, said it would promote Comecon specialisation and integration and "the growth of prestige and attractiveness of socialism in the world."

In four of the five focal areas of the joint programme - electronics, robotics, new industrial materials and biotechnology - Comecon lags behind the West. In nuclear energy, Comecon is roughly on a par with the West, but Moscow is keen Eastern Europe should accelerate nuclear energy projects to save on Soviet oil and gas.

The new agreement stresses the need for "direct links" between enterprises of different Comecon member countries, which have traditionally organised trade specialisation and integration, not very successfully, on a government-to-government basis. It also sets up a new organisation, Interrobot, to pool Comecon efforts in automation.

Robotics is a new area put under embargo this year by Western countries through the Paris-based Coordinating Committee (CoCom), which vets militarily sensitive sales to all Comecon countries except Cuba. The tightening of Western export restrictions to improve their indigenous technology and innovation.

At a press conference in Moscow, Soviet scientists partly likened the Comecon move to the Europa technology programme being pursued by West European countries. But they claimed that because it was purely peaceful in character, it had nothing in common with President Ronald Reagan's Star Wars space defence research programme.

Mr George Shultz, US Secretary of State, told President Nicolae Ceausescu of Romania last week that growing congressional criticism of Bucharest's human rights record could influence Washington's annual renewal of Romania's Most Favourable Nation (MFN) trade status in the US.

The Romanian leader responded in a speech in Bucharest by noting that no country could impose its way of thinking, its social system or its policy in any field on another people.

"We will never permit anyone to interfere in our domestic affairs," he said.

Mr Ceausescu's tough reaction echoed previous Romanian responses to criticism of its policies by both Western countries and the Soviet Union. As in these cases, he did not name either Mr Shultz or the US in his criticism.

Romania would not permit "under any form or circumstance" interference in its domestic affairs, the President said. It would solve by itself all its domestic problems, he noted.

Despite President Ceausescu's apparently unyielding position, he was expected to allow a US human rights group to visit Romania to examine the situation of its religious and ethnic minorities.

## Romania attacks US over Shultz speech

By Our Berlin Correspondent

ROMANIA has sharply criticised the US for allegedly interfering in the country's internal affairs.

Mr George Shultz, US Secretary of State, told President Nicolae Ceausescu of Romania last week that growing congressional criticism of Bucharest's human rights record could influence Washington's annual renewal of Romania's Most Favourable Nation (MFN) trade status in the US.

The Romanian leader responded in a speech in Bucharest by noting that no country could impose its way of thinking, its social system or its policy in any field on another people.

"We will never permit anyone to interfere in our domestic affairs," he said.

Mr Ceausescu's tough reaction echoed previous Romanian responses to criticism of its policies by both Western countries and the Soviet Union. As in these cases, he did not name either Mr Shultz or the US in his criticism.

Romania would not permit "under any form or circumstance" interference in its domestic affairs, the President said. It would solve by itself all its domestic problems, he noted.

Despite President Ceausescu's apparently unyielding position, he was expected to allow a US human rights group to visit Romania to examine the situation of its religious and ethnic minorities.

## Hungarian and Austrian Greens step up protests

BY PATRICK BLUM IN VIENNA

HUNGARIAN and Austrian Greens will step up their campaign to oppose the construction of a large dam in Hungary, spokesmen for environmentalist movements from both countries said in Vienna this week.

Hungary is the only Communist country which allows the existence of an independent Green movement.

Mr Janos Vargha, a Hungarian biologist and prominent environmentalist, said in Vienna on Wednesday that Hungary's Greens would intensify their opposition to the Nagymaros dam which is part of a network of dams to be built jointly with Czechoslovakia.

The Austrian Government, which has been forced to shelve its own plans to build a large dam at Hainburg, on the Czechoslovak border, because of strong Green opposition, agreed recently to provide most of the estimated Sch 6 billion (\$447m) cost of the dam. In exchange Austria will receive electricity and Austrian companies will carry out

about 70 per cent of the work. The project has angered environmentalists in both countries. Mr Vargha says that the dam will endanger drinking water supplies to about 3m Hungarians and that it will destroy the countryside on the Danube's banks. Environmentalists will use constitutional and peaceful means to oppose the dam's construction, he said.

In the past few months over 6,000 signatures have been collected for a petition opposing the dam and Hungarian economists have raised doubts about its economic viability.

Mr Gunther Nanning, a leading spokesman for the Austrian environmentalists who was recently thrown out of the Socialist Party for his activities, accused the Austrian Government of exporting its problems. He warned that Austria's Greens would consider protest actions in Hungary similar to the ones that forced the Austrian Government to abandon the Hainburg project.

## OVERSEAS NEWS

## India sets out policy for long-term tax reform

INDIA'S direct taxation laws are to be rewritten during the next five years to simplify the regulations and curb evasion as part of the country's first long-term fiscal policy which was published yesterday by Mr Vishwanath Pratap Singh, the Finance Minister.

Personal income tax levels are to be kept at the reduced levels introduced in the annual budget last March and other taxation is to be simplified and liberalised. A modified form of value added tax, dubbed "Modvat" is to be introduced, and a gradual move made away from physical controls of the economy to fiscal controls.

Mr Singh promised the policy early in the year and its publication yesterday follows the launch last month of India's seventh five-year plan for 1985-90 which sets the alleviation of poverty as a primary aim. The target is to reduce the proportion of the population below the poverty

**John Elliott in New Delhi considers the effects of tax changes planned for the next five years.**

line from 37 per cent to 26 per cent in 1977-78 the figure was over 48 per cent.

Yesterday's policy document says that the contribution fiscal policy can make is to mobilise additional financial resource and encourage rapid economic growth and expanding employment opportunities.

"The long-term task of fiscal policy in the area of taxation is to bring about a structural reform in the present system. The reform should ensure that revenues go up automatically and commensurately as incomes and prices rise. It should also aim at securing better compli-

ance, reducing harassment and improving the efficacy of the tax structure."

Rates of personal tax which were lowered in the March budget to improve compliance and raise revenue are to be kept "unchanged for a minimum of five years," says the document. Temporary surcharges would be introduced if "certain compelling circumstances such as an external emergency" made it necessary to mobilise additional revenue.

Tax receipts rose 25 per cent in the April-October period this year over the same months last year, with personal income tax receipts rising 40 per cent.

Linking the policy changes with the Government's attack on the black economy the policy document says: "It should be emphasised that what matters is not the tax rates on paper but the actual collections and their incidence. Where taxes are evaded by the better-off sections of society, the equity of the tax

system is impaired. An important element of the long-term fiscal policy must, therefore, be to ensure that taxes as levied are fully collected and strong action is taken to curb evasion."

A feature of India's present tax structure is the preponderance of indirect taxes. In the budget for 1985-86 the total amount of tax revenue to be collected by the national and individual states' governments is estimated at Rs 280bn (£13.3bn), of which 19 per cent is expected to come from direct taxes on income, expenditure, property and capital transactions and 81 per cent from indirect taxes on commodities and services. This 81 per cent compared with 73 per cent ten years ago and 77 per cent in the early 1980s.

The document says that heavy reliance on indirect taxation is not unusual for a country in the early stages of development. But "an important objective

of fiscal policy must be to reverse the decline in the share of direct taxes over the long term."

Other policies set out for the next five years include:

1. Reforming corporation tax whose base has been "eroded by exemptions and deductions." The public sector, especially oil companies, contribute over 50 per cent of the total Rs 25bn collected in 1983-84.

An industrial licence scheme is to be abolished from April 1987 and in its place companies are to be allowed to deduct 20 per cent of profits from taxable income. This money will be deposited with the Industrial Development Bank of India at 10 per cent interest and will be utilised only for investments in "plant and machinery and certain other specified purposes." Approved investments carried out by the company concerned will be tax-deductible as part of the 20 per cent.

2. Capital gains tax is to be progressively reformed following an in-depth Government review.

3. A modified form of value added tax called "Modvat" is to be progressively introduced. A full VAT system is politically impractical because of what the document describes as the "formidable practical considerations" of individual states' rights to impose sales taxes.

4. A Rs 100m venture capital fund is to be set up for pilot plants using indigenous technology or adapting imported technology.

5. Central excise duties are to be simplified to relieve taxation on manufacturing components and to rationalise schemes for small businesses. Customs duties are also to be restructured with two-tier systems for raw materials and components. Anti-smuggling measures are to be stepped up.

● Mr Vishwanath Pratap Singh: long-term policy

## Iraq plans sharp increase in oil output

IRAQ is aiming to produce oil at the rate of 2.4m barrels a day, or twice its present quota under the existing sharing agreement of the Organisation of Petroleum Exporting Countries, according to Mr Qassem Ahmed Taki, Minister of Oil, Our Foreign Staff reports.

He described the quota given Iraq under the system—still officially in force but disowned by the majority—as "unfair and unjust" in an interview with the official Baghdad weekly magazine Al-Farabi published yesterday.

With the completion of the link from Iraq's southern fields to Saudi Arabia's trans-penninsula pipeline system Iraqi oil output has recently reached 1.6-1.7m b/d. But capacity will rise further when the loop-line to Ceyhan on Turkey's Mediterranean coast is completed towards the end of next year.

## Assam election

A militant law student, Mr Prafulla Kumar Mahanta, 32, looks set to become Assam's new Chief Minister as his fledgling ethnic party pulled ahead of Mr Rajiv Gandhi's Congress (I) party as results trickled in from Monday's election in the northeast Indian state. Reuter reports from Gauhati.

The Asom Gana Parishad had won 55 of the 106 seats declared by yesterday but was still 16 short of a majority in the 126-seat state assembly, election officials said.

The ruling Congress (I), badly mauled in several of its strongholds, had only 17 seats.

## Nablu mayor named

A leading Palestinian businessman has been appointed mayor of Nablu, the largest town on the Israeli occupied West Bank, the first local election held since the previous mayor was deposed in 1982. Lynne Richardson adds from Tel Aviv. He is Mr Zaid al-Masri, 44, an uncle of Jordan's Foreign Minister, Mr Taher al-Masri.

## Punjab protest

Police yesterday detained about 20,000 people and fired tear gas to break up demonstrators marching on the Indian parliament in protest against a peace agreement in the northern state of Punjab. Reuter reports from New Delhi.

## Manila court rules voting can go ahead

By Samuel Senoren in Manila  
THE Philippine Supreme Court voted yesterday to allow early presidential elections to be held as scheduled on February 7 1986.

Voting seven to five with one abstention, the court threw out 11 petitions which had contested the constitutionality of the early poll on the ground that no special presidential election could be held if the presidency was not vacated.

President Marcos, 68, who is standing for re-election had submitted a post-dated letter of resignation to Parliament saying he would resign only after a winner is declared.

Mr Marcos is being challenged by Mrs Corason Aquino, 52, widow of the slain opposition leader Mr Benigno Aquino.

The Supreme Court ruling removed the remaining cloud of doubt on the election issue just over a week after the election campaign officially started. Mrs Aquino and her vice-presidential running mate, Mr Salvador Laurel, 57, have already barnstormed through some of the vote-rich areas where they were received by enthusiastic crowds.

Mr Marcos' appearances have been beamed nationwide on television and radio. Mrs Aquino's rallies could merit only live coverage from small radio stations.

## Tokyo predicts 4% growth rate

BY JUREK MARTIN IN TOKYO

THE Japanese Government has finally forecast that the economy will expand by exactly 4 per cent in real terms in the next fiscal year, starting next April.

This compares with a revised official estimate of 4.2 per cent real growth in the current fiscal year, reduction from the original 4.6 per cent projection.

The projections, drawn up

by the Economic Planning Agency, form an integral part of the calculations in the budget for fiscal 1986-87, which is to be presented in two weeks' time.

Other key parts of the official projections include: ● a merchandise trade surplus of about \$50bn in 1986-87, down \$2bn from the revised estimate for the current year;

● a current account surplus of about \$51bn, roughly the same as the revised forecast for this year;

● an assumption that the yen will average ¥204 to the dollar over the fiscal year;

● the domestic economy will account for all the real growth; export earnings are estimated to fall by 0.2 per cent.

## Election reform Bill abandoned

BY OUR TOKYO STAFF

THE Japanese Government yesterday abandoned its attempt to ram its controversial electoral reapportionment Bill through the current session of parliament, which ends this weekend.

Instead the Bill will presumably be represented, though not necessarily in its present form, to the next Diet session, which begins next week.

The tactical withdrawal constitutes a clear political setback for Mr Yasuhiro Nakasone, the Prime Minister, who had heavily promoted the cause of giving the cities more voting power at the expense of the countryside.

It is also an interesting reminder of the latent power of

the opposition parties in Japan. Although the ruling Liberal Democratic Party has, on paper, the votes to push through the Diet what it wants, such an approach in Japanese politics is considered arrogant and counter-productive.

On this occasion, Mr Nakasone was also undermined to a degree by the lack of enthusiasm for the Bill from inside the LDP, both from the handful of MPs whose seats were at risk and from his political rivals who want him unseated as party leader and thus Prime Minister.

The Bill itself, known as "six-six," would have taken six seats from the least populated districts and given them to the

under-represented cities. It was drawn up to meet the Japanese Supreme Court's objections to the electoral imbalance.

At one stage in what has been several weeks of tense intra-parliamentary manoeuvring, the LDP even offered to drop another controversial Bill, on counter-espionage, to try and induce the opposition to accept "six-six."

Mr Nakasone's failure to get his way demonstrates again the shackles which bind a Japanese Prime Minister, even a publicly popular one. But some critics are also suggesting that it is a sign that he is losing his once-deft political touch.

## Afrikaners bury victims of landmines

By Anthony Robinson in Tzaneen

THE PEOPLE of Tzaneen, a sleepy country town in the northern Transvaal lowveld, buried the wife and two children of Mr Dirk van Eck, three of the six victims of last Sunday's landmine explosion close to the Zimbabwe border, in an angry silence yesterday.

After the funeral a grim-faced Mr Van Eck, who survived the blast together with his 15 month old younger son Erik, voiced the sentiments of this mainly Afrikaner farming community when he warned the African National Congress (ANC) which has claimed responsibility for the blast "not to awaken the tiger in the Afrikaner folk."

"As I stood before the open grave I marvelled that some people still want to negotiate with the ANC," he added. "They must realise that if they tangle with the Afrikaners they are messing with people who can hurt them. I just hope that these murderers will be tracked down and dealt with."

Among the crowd of gently weeping mourners stood Mr Dirk Bezuidenhout, half his face covered by a livid scar and his right arm heavily bandaged. He too survived the blast which killed his mother, his 9-year old daughter Carla and 3-year-old son Kobus.

## Israel's diplomatic hopes boosted by Ivory Coast

BY PETER BLACKBURN IN ABIDJAN

THE ANNOUNCEMENT Wednesday that Ivory Coast President Houphouët Boigny, doyen of French speaking sub-Saharan African presidents, will renew diplomatic relations with Israel, marks an important step in that country's campaign to regain the official recognition in black Africa.

Nearly all black African countries broke diplomatic ties with Israel in 1973 following the war with Egypt. Now other moderate African countries—such as Togo, Gabon, the Central African Republic and the Cameroon—may soon follow the Ivory Coast's example, according to observers in Abidjan.

Zaire renewed ties in 1982 and was followed by Liberia in 1983. Malawi, Lesotho and Swaziland never broke diplomatic relations.

Ivory Coast's decision to restore diplomatic links had long been expected. At a recent marathon press conference in Abidjan, President Boigny hinted that a resumption of ties was close. "The Ivory Coast is a friend to all and enemy to nobody," he said, adding that Israel had not yet made a formal request.

President Boigny pointed out that the rupture of diplomatic ties with Israel has not helped

to solve the Palestinian problem while Egypt's renewal of relations with Israel in 1979 removed a further obstacle.

Many African countries became disenchanted when Arab aid failed to fulfil expectations and often found the political conditions attached unacceptable.

Ivory Coast, the last African country to break diplomatic relations with Israel in November 1983, continued to maintain close commercial links.

Lynne Richardson adds from Tel Aviv: Mr Shimon Peres, the Israeli Prime Minister, described President Boigny as "a man who knows his principles and knows his friends. He was the last to cut ties with Israel and wanted to be the first to renew them."

Mr Peres stressed that the Ivory Coast's leader did not ask for anything in return for renewing the ties, but was moved "entirely on principle." Mr Peres added that Ivory Coast was the "success story of Africa" and that the President "intends to persuade other African states to follow his example."

At least two other African countries are expected to restore relations soon, Mr Peres said, but he declined to name them.

## Capital spending in US forecast to decline 1%

BY STEWART FLEMING IN WASHINGTON

CAPITAL spending in the US is expected to decline in 1986 by around 1 per cent after adjusting for inflation, bringing to an end the strong investment upswing of the past two years, the Commerce Department reported yesterday.

Releasing the results of its September survey of business investment plans, the Department said that adjusted spending in the manufacturing sector next year is expected to decline by 4 per cent, largely as a result of a sharp cut in outlays by durable goods manufacturers.

The survey, which has generally proved to be a reasonably reliable guide to business investment plans, especially in the short term, will reinforce the judgment of economists who have been arguing that weakening capital investment will be a drag on economic activity next year.

It also tends to confirm the view of economists who have maintained that the Reagan Administration's economic policies, in particular the tax cuts for business in 1981, have not fundamentally altered investment trends. "It's looking like a normal cyclical recovery," said

Mr David Wyss, an economist with Data Resources, a US consulting company.

Mr Malcolm Baldrige, Commerce Department secretary, said that falling interest rates and legislation to cut the budget deficit may lead companies to revise their investment plans upwards. Mr Wyss argues that this could happen in the second half of next year but that the survey points to weakness in the first half.

The commercial sector, which includes office and shopping centres, is the only one showing reasonable investment strength.

Sluggish economic growth, uncertainty about the implications of tax reform legislation for business and weak corporate profits, particularly in manufacturing, are all cited as factors helping to account for the cuts in capital spending plans.

Capital investment declined 1.9 per cent in 1983 in current dollars before rising strongly by 16.3 per cent in 1984 as the economy expanded.

This year the Commerce Department expects capital spending to have risen 8.4 per cent.

## Chile eases foreign exchange controls

By Mary Helen Spooner in Santiago

CHILE'S Central Bank has partially loosened foreign exchange controls, allowing domestic banks to deal in foreign currency futures and raising the amount of dollars Chileans travelling abroad may purchase.

The measures, announced in Chile's official government bulletin, are aimed at dampening the country's parallel market, where dollars are bought and sold at more than 10 per cent over the official rate of 80 pesos.

The central bank said the provision allowing trading in foreign currency futures would protect importers and exporters from losses derived from fluctuations in the exchange rate.

The trading will be restricted to the US dollar, the British pound, the French franc, the Swiss franc, the West German mark and the Japanese yen.

The announcement of the measures coincides with the arrival of a \$714m (5506m) disbursement from international banks, the first two segments of a \$1,065bn loan package for 1985 and 1986 negotiated earlier this year.

The \$714m raises Chile's foreign reserves to just under \$2bn, the minimum reserve level contained in the country's accord with the International Monetary Fund.

David Gardner reports on Mexico's desperate efforts to reform its economy  
Model debtor faces credibility problem

IN A BURST of activity over the past month, the Mexican Government has applied to join the General Agreement on Tariffs and Trade (GATT), presented a recessionary budget with tax increases and spending cuts, raised petrol prices by more than half, and resumed its programme to privatise "non-strategic" state assets by selling off a major hotel chain.

This week it will foreseeably grant minimum wage rises which will in no sense compensate workers for the around 40 per cent which they have suffered since the 1982 financial collapse. And next month the world's fourth largest oil producer will for the first time link its export prices for crude oil to movements in the spot market.

This month or early next, Mexico is also expected to reach agreement with the International Monetary Fund (IMF) on a "structural adjustment" programme for next year, in effect an extension of the three-year agreement with the Fund signed after the 1982 debacle.

It is assumed by bankers and officials here that the deflationary budget, with its commitment to halve the public sector deficit from a forecast 9.6 per cent of GDP to 4.9 per cent next year, will reduce inflation from a current 60 per cent to between 45 and 50 per cent.

The IMF and World Bank will satisfy the IMF and unlock the \$4.1bn in net new finance Mexico is seeking in 1986 from its creditors and international financial institutions.

It is implied that everyone will accept these terms, first, because Mexico owes the international financial system \$96bn. Though until recently it has been the model debtor of the region, its continuing ability to export around \$13bn in capital each year to meet its foreign obligations now hangs by a thread, particularly when \$6bn of earthquake damage is taken into account.

Second, it is now widely argued that Mexico it too important strategically to be allowed to go to the wall. It has a 2,000 km border with the

US, and a population worn down by three years of unprecedented austerity and badly shaken, at least in the capital, by September's horrific earthquakes. People are also losing virtually all faith in the 56-year-old ruling Institutional Revolutionary Party (PRI).

The Government is fully aware it is pushing against the limits of public tolerance. "We can dig and dig and dig, and then we get to the bottom line which is arithmetically intractable, and that's it," says Mr Angel Gurría, Mexico's chief foreign debt negotiator, speaking shortly before release of the budget and the beginning of talks with the IMF.

Externally, Mexico's economic managers are already growing next year of around 3 per cent in the US economy (which takes three quarters of Mexico's exports) and stable international interest rates. They are allowed in the budget for an oil price fall of up to \$3 per barrel, but fear a sharper fall, particularly with Opec's decision to defend market share.

The trade surplus has been nearly halved and a 1984 current account surplus of \$4bn has been turned into a deficit, as this politically-induced and premature recovery sprints in imports and blocks exports because of the revival in domestic demand.

A tradition of strong protectionism and producing for the domestic market means that any future recovery will produce the same results without major structural reforms.

into a revenue loss for the six months of \$1.5bn.

But despite the new flexibility, Mexico is still strapped by structural dependence on oil, which provides 70 per cent of its foreign exchange, and 65 per cent of its tax revenue. Falling revenues this year forced the Government to borrow heavily domestically, emptying the nationalised banks of funds, distorting the money markets (interest on three months Treasury Bills last week went back to their historic high of 75 per cent) and encouraging speculation against the peso and capital flight.

The Government has repeatedly said the only way out of this is to cut the size of the public sector, but despite spending cuts, there has been little indication it is willing to carry out the necessary plant and manpower reductions.

The Government's strategy of "grow to pay" produced a first half growth of nearly 8 per cent which pushed a coach-and-horses through its external accounts.

The trade surplus has been nearly halved and a 1984 current account surplus of \$4bn has been turned into a deficit, as this politically-induced and premature recovery sprints in imports and blocks exports because of the revival in domestic demand.

A tradition of strong protectionism and producing for the domestic market means that any future recovery will produce the same results without major structural reforms.

The Government has this year liberalised imports to boost non-oil exports, and hopes further to liberalise through GATT membership. But this opening up of the economy is a medium term prospect.

In this and in other programmes, the Government's reform policies are usually coherent and often ingenious. The new political President Miguel de la Madrid's team, with origins in the state bureaucracy, is very bad at explaining what it is doing, and even worse at winning support for it.

A series of technically brilliant measures to stabilise the exchange rate, for example, have been ignored by a disbelieving population which has rushed to buy dollars and thereby depreciated the free market peso over this year by 130 per cent.

Mr de la Madrid inherited a credibility problem because of the mismanagement and corruption of his predecessors. But his own credibility has been eroded badly this year by his Government's decision to resort to ballot rigging in the July elections and its mishandling of the earthquake emergency.

Last month's plethora of measures nevertheless restored courage. National opinion is easily inflamed by sensitive issues like GATT entry and oil policy, on which the watchdogs of national sovereignty, in and outside the Government, traditionally concentrate their attention.

## Congress races to complete catchall spending Bill

A WEARY US Congress raced yesterday to finance a catchall spending Bill endorsed by the White House and head home for the holidays, AP reports from Washington.

"We hope that this is the last day and anticipate this is the last day," said Mr Tim O'Neill, Speaker of the House of Representatives.

But the rush to adjourn may leave unfinished an \$80bn (580.7bn) package of spending cuts and tax increases sought in a year-long struggle over the budget.

Mr Larry Speakes, White House spokesman, said that President Ronald Reagan will

sign an omnibus \$360bn spending Bill to finance the Defense Department and other federal agencies until September, a major obstacle standing in the way of adjournment.

Meanwhile, Congressional sources said Reagan plans to sign on Monday the \$52bn Farm Bill passed on Wednesday, even though it is more expensive than the Administration had wanted.

Congress also sent the White House a separate rescue package for the \$70bn Farm Credit System, the 37-bank network that is the nation's largest farm lender. Mr Reagan is expected to sign that Bill too.

## Cuban health chief removed

CUBA'S Health Minister, Mr Sergio del Valle, has been removed, having held the job for the 26 years of Dr Fidel Castro's leadership, our Foreign Staff writes.

Mr del Valle's departure confirms that a major shake-up is underway in the government and Cuban Communist Party.

Dr Castro is wending out a number of veterans of the revolution. Mr del Valle was a member of the party's politburo. On December 3, Mr Ramiro Valdes, the Interior Minister, was replaced by his deputy, General Jose Abantes Fernandez. Mr Valdes became head of security and intelligence (G-2) after the revolution in 1959.

## Ontario imposes tough acid rain controls

BY BERNARD SIMON IN TORONTO

THE PROVINCIAL government of Ontario has imposed the most stringent acid rain controls in North America and called on authorities in the US to follow its example.

The new rules will compel the Canadian province's four biggest polluters—Inco and Falconbridge, the two nickel producers, Ontario Hydro, the province's power utility, and Algoma Steel—to cut their combined sulphur dioxide emissions by almost 70 per cent from 1980 levels, to 665,000 tonnes a year in 1994. The four companies account for about four-fifths of

sulphur dioxide pollution in Ontario.

Mr James Bradley, Ontario's Environment Minister, said the cost of meeting the new standards at "several hundred million dollars."

Mr Bradley said the rules are aimed at "sending a tough, direct message to the US" to tighten emission controls on American industries. About half the acid rain falling on Canadian soil is estimated to come from US polluters. The Reagan Administration has hesitated to take tougher action against acid rain.

## Grenada coalition rift widens

BY CANUTE JAMES IN KINGSTON

A YEAR after a handsome victory in a general election the three-party coalition which forms the government of Grenada is showing increasing signs of internal friction.

The struggle between Dr Francis Alex, the Labour Minister, and Mr George Brizan, the Agriculture Minister, to establish themselves as the successor to Mr Herbert Blaize, the Prime Minister, intensified at a recent convention of the coalition, the New National Party.

The position of deputy leader has assumed greater importance recently because of the un-

certain health of Mr Blaize, who has just spent five weeks in the US being treated for what was described as a prostate problem.

Mr Blaize took office a year after the island's Socialist Government was overthrown by an armed coup which was followed by a US military invasion of the island of 110,000 people.

He has been reluctant to encourage either Mr Brizan or Mr Alex, leaders of the other parties in the coalition.

At the party convention Mr Blaize attempted to head off a clash between the two by unsuccessfully proposing a constitutional change to allow two

deputy leaders. Dr Alex won the election by a narrow margin. The possibility of Dr Alex succeeding Mr Blaize is likely to be welcomed by the Grenada Government's supporters not least the US. Mr Brizan's views are considered to be far less than those of Mr Blaize and Dr Alex.

The possibility of the coalition falling apart is likely to concern not only Washington but neighbouring Commonwealth Caribbean leaders who fear a resurgence of support for the rum of the Socialist Party which ran the island from 1979 until the US invasion.

## WORLD TRADE NEWS

## Too many trucks pose problem for Xiamen

By Robert Thomson in Xiamen

IT SEEMED like a good idea at the time. China's open-door had become a freeway for Japanese vehicle imports, so why not buy the parts and assemble trucks here at a saving?

Instead of saving, authorities in this southern port city are left with 2,000 Toyota pickup trucks they are unable to sell.

The central government, which had banned most vehicle imports for the next two years, will not allow Xiamen, one of China's Four Special Economic Zones, to sell the vehicles in China because the country has already overspent on imported trucks.

The trucks cannot be sold abroad because the municipality does not have an export licence from the Japanese company, and, as one Xiamen official put it, selling Toyota trucks made in China is difficult.

So, the zone has 2,000 trucks parked in vacant lots, waiting for someone to solve the conundrum.

The problem, which Xiamen officials are reluctant to discuss, highlights the problems provincial officials have faced in coming to terms with their newfound financial autonomy.

The case shows why Peking has taken back some of the freedom granted to the provinces, required central approval for all technology import contracts outside the zones and imposed strict control on the use of foreign exchange, which has hit even the zone itself.

At the Xiamen Construction and Development Corporation, which oversees much of the development in the zone, officials say the truck plant cost about \$1m, and production began in August this year.

Authorities in Peking are taking a tough line because "too many assembly lines have been introduced."

It is our hope the Government will let us sell the trucks so we can have more capital to develop our industry, and we have to pay off the interest."

On the future of the assembly line, the corporation would only say the venture "has not been successful so far."

Unless the central government allows the trucks to be sold in China, the authorities will have no choice but to use the pickup trucks in Xiamen, which can hardly support 2,000 more vehicles.

Paul Cheeseright in Brussels and Carla Rapoport in Tokyo examine a new twist in the tale of anti-'dumping' procedures

## Subtle shift in Community's trade skirmishes with Japan

international trade. There is a GATT anti-dumping code which sets out in guideline form the procedures an importing country may use to counteract unfair trade.

A duty can be imposed on a product when its export price is less than what is called "its normal value" and when the sale of that product in an importing country is causing injury to the local industry.

The provisions of the GATT code are incorporated in Community legislation, adopted in 1979 and amended in 1982 and 1984. This legislation is more detailed than the GATT code, but does not specify how the Community should work through the anti-dumping procedure.

There is then discretion in the way a dumping margin can be calculated, the way the difference between the domestic and export price of a product can be established. The answer you get depends upon the method used. The aim of the procedure is to even out the effects of products sold at an unfairly low price.

Until recently the Community had always treated the process as a technical one, whereby officials followed set procedures. The Commission's anti-dumping unit only mounts an investigation when a complaint is received from industry.

The investigation discloses dumping and injury, duties are imposed. If complaint is proved to be unfounded, the matter is dropped.

But, in July, a new element was introduced. Definitive duties (duties which are set without any time limit) were

imposed on five Japanese excavator manufacturers. Trade ministers, according to the official journal text, wanted the decision seen "in light of the present commercial relations with Japan." Politics had arrived.

Afterwards, Mr Willy de Clercq, the Community's external relations commissioner, imposed on five Japanese excavator manufacturers. Trade ministers, according to the official journal text, wanted the decision seen "in light of the present commercial relations with Japan." Politics had arrived.

the main exporter to the EEC, was deemed insufficient, but undertakings were accepted from other companies with a smaller market share.

Now, the way has passed to trade lawyers in both Brussels and Tokyo that acceptance of price undertakings will be rare. "Those who handle the file no longer consider price undertakings," said one. "They say this is not the Commission's fault but the member states."

The official Japanese view on this is relatively restrained. "Whether the EEC should accept undertakings is up to them," said one official at the Ministry of International Trade and Industry. "I suppose they found they were not viable enough protection."

Price undertakings though come towards the end of the anti-dumping process. First the fact of dumping has to be established. It is here that both Japanese Government and industry are less restrained. The Ministry of Trade and Industry is building a case to try to prove discrepancies between EEC practice and the GATT guidelines.

Industry is charging that as Canon, the typewriter manufacturer puts it: "The Commission stitched together a methodology which created rather than revealed a dumping margin. The finding of dumping is virtually automatic."

Certainly, lawyers are agreed that the Commission has changed the fashion in which it establishes whether or not there is a difference between the ex-factory price of an item for export and the ex-factory price of an item for domestic sale. The new method was evident in an anti-dumping action on electronic typewriters. This led to duties ranging from 21 to 35 per cent on the value of typewriters namely Brother, Canon, Nakajima All, Silver Seiko and Tokyo Electric. It was confirmed in the electronic scales case.

When a price investigation takes place, the Commission deducts the selling expenses from the wholesale price in both the Community and Japan. Where a product is made primarily for export it calculates what the expenses on a putative domestic sale might have been.

The allegation, as laid out in the diagram from Canon, is that the calculation which once was symmetrical—the same sort of expenses being deducted from both domestic and export transactions—has been distorted. Expenses are being permitted on the export which are not permitted on the

domestic sale. Thus the domestic price may be made to look higher than the export price. If that is established, then a dumping margin has been created.

Brother contends that "what the Commission did was unbelievably unfair. It's simple—they deducted all sales costs in the EEC and virtually no deductions in Japan." Brother and the other companies involved have won some support from the European Court of Justice for this view.

They sought and failed to obtain an interim injunction lifting the duties until a final judgment was made, but the Court accepted that their claim of illegality in the conduct of the investigation was "permitted," demanding further examination. Their appeal to have the duties lifted is still pending. The court is also currently considering a ball-bearing case.

Lawyers believe that "the novel method of calculation" is a powerful weapon in the Commission hands.

"Slowly but surely anti-dumping is becoming more antagonistic," said Mr Jacques Buhart of Couderc Freres, the Paris lawyers. "Next it will be microwave ovens and video cassette recorders." A bilateral restraint agreement on the

recorders expires at the end of the year.

Within the Commission there is indeed a strain of thinking that sees anti-dumping actions as the first stage of an offensive against Japan, leading to higher tariffs and restricted Japanese access to European capital markets. By following a more aggressive anti-dumping policy, the Community is only doing what the US has done for years, officials say.

The Japanese response is varied but uncertain.

For 18 months now a Fair Trade Centre in Tokyo has been collecting information on anti-dumping. Professor Mitsuo Matsushita, the director, recognises that export cartels could be used to raise prices, but noted that the device falls foul of the competition rules. It had been tried with the French on ball-bearings but led to a French anti-trust investigation.

"The easiest way is to have talks with European competitors and agree on exports, but legally speaking that's a risky business. Government-to-government talks would be better," he said. The Ministry of Trade and Industry would like that too. At the moment in this area of EEC-Japan relations then, it is the EEC which makes the running.

# How to write for The Economist.

## (Extracts from The Economist style sheet.)

On only two scores can *The Economist* hope to outdo its rivals consistently. One is the quality of its analysis; the other is the quality of its writing. The aim of this style sheet is to give some general advice on writing, to point out some common errors and to set some arbitrary rules.

The first requirement of *The Economist* is that it should be readily understandable. Clarity of writing usually follows clarity of thought. So think what you want to say, then say it as simply as possible. Keep in mind George Orwell's six elementary rules ("Politics and the English Language", 1946):

- (i) Never use a metaphor, simile or other figure of speech which you are used to seeing in print.
- (ii) Never use a long word where a short one will do.
- (iii) If it is possible to cut out a word, always cut it out.
- (iv) Never use the passive where you can use the active.
- (v) Never use a foreign phrase, a scientific word or a jargon word if you can think of an everyday English equivalent.
- (vi) Break any of these rules sooner than say anything outright barbarous.

**Metaphors.** "A newly invented metaphor assists thought by evoking a visual image," said Orwell, "while on the other hand a metaphor which is technically 'dead' (eg, iron resolution) has in effect reverted to being an ordinary word and can generally be used without loss of vividness. But in between these two classes there is a huge dump of worn-out metaphors which are merely used because they save people the trouble of inventing phrases for themselves."

**Short words.** Use them. They are often Anglo Saxon rather than Latin in origin. They are easy to spell and easy to understand. Thus prefer about to approximately, after to following, let to permit, but to however, use to utilise, make to manufacture, plant to facility, take part to participate, set up to establish, enough to sufficient, show to demonstrate and so on. Underdeveloped countries are often better described as poor; substantive usually means real or big.

**Unnecessary words.** Some words add nothing but length to your prose. Use adjectives to make your meaning more precise and be cautious of those you find yourself using to make it more emphatic. The word very is a case in point. If it occurs in a sentence you have written, try leaving it out and see whether the meaning is changed. He was tall may have more force than He was very tall.

**Avoid strike action** (strike will do), the business community (businessmen), cutbacks (cuts), track record (record), wilderness areas (wild areas), large-scale (big), shower activity (rain), weather conditions (weather), etc.

**Use words with care:** a heart condition is usually a bad heart, positive thoughts (held by long-suffering creditors, according to *The Economist*) presumably means optimism, a substantially finished bridge is an unfinished bridge, a major speech usually just a speech.

**Active, not passive.** It is not incumbent upon you to be pompous.

**Jargon.** Avoid it. All sections of *The Economist* should be intelligible to all our readers, most of whom are foreigners. You may have to think harder if you are not to use jargon, but you can still be precise. Technical terms should be used in their proper context; do not use them out of it. There are simple words which can usually do the job of exponential (try fast), interface (frontier) and so on. To fund is a technical term, meaning to convert floating debt into more or less permanent debt at fixed interest; do not use it if you mean to finance, or to pay for. Avoid, above all, meaningless or ambiguous jargon, such as 15% more fuel-efficient.

**Try not to use foreign words and phrases** unless there is no English alternative, which is unusual (so a year or per year, not per annum; a head or per head, not per caput etc).

**The reader is primarily interested in what you have to say.** By the way in which you say it you may encourage him either to read on or to stop reading. If you want him to read on:

- (i) Do not be stuffy or pompous. Use the language of everyday speech, not that of spokesman, lawyers or bureaucrats (so prefer let to permit, people to persons, buy to purchase, colleague to peer, way out to exit, present to gift, rich to wealthy). You can avoid offending women without using chairperson; humankind and Ms. Prefer chairman (for a man) or in the chair; mankind, so long as the context is not offensive, and the precision of Mrs and Miss wherever you can.

- (ii) Do not be hectoring or arrogant. Those who disagree with you are not necessarily stupid or insane. You can make your views clear without telling the government what it must do. Nobody needs to be described as silly: let your analysis prove that he, or she, is.

- (iii) Do not be too pleased with yourself. Don't boast of your own cleverness by telling the reader that you correctly predicted something or that you have a scoop. You are more likely to bore or irritate him than to impress him. So keep references to *The Economist* to a minimum, particularly those of the we-told-you-so variety. And avoid references to "this correspondent" or "your correspondent," which are always self-conscious and often self-congratulatory.

- (iv) Do not be too chatty. The sentence "So far, so good" neither informs nor amuses. It irritates. So do Surprise, surprise, Ho, ho, etc.

- (v) Do not be too free with slang (eg, He really hit the big time in 1966). Slang, like metaphors, should be used only occasionally if it is to have effect. Avoid expressions used only by journalists, such as giving people the thumbs up, the thumbs down or the green light. Stay clear of gravy trains and salami tactics. Do not use the likes of. And avoid words and expressions that are ugly or overused, such as the bottom line, caring (as an adjective), guesstimate (use guess), schizophrenic (unless the context is medical), option (prefer choice), crisis, key, major, massive, meaningful, muscular, perceptions, prestigious and overwhelm.

- (vi) Do not use too many Americanisms. Many American words and expressions have passed into the language; others have vigour, particularly if used occasionally. Some are short and to the point (so prefer lay off to make redundant). But many are unnecessarily long (so use and not additionally, car not automobile, company not corporation, transport not transportation, district not neighbourhood, oblige not obligate, stocks not inventories unless there is the risk of confusion with stocks and shares). Other Americanisms are obscure or objectionable (so avoid affirmative action, rookies, end runs, stand-offs, point men, ball games and almost all American sporting terms). Do not write meet with or outside of: outside America you just meet people. Do not figure out if you can work out. Cut rather than cut back. And do not use such nouns as author, critique, host, impact, loan, party, pressure and roundtable as verbs. Put adverbs where you would put them in normal speech, which is usually after the verb (not before it, which usually is where Americans put them).

Choose tenses according to British usage, too. In particular, do not fight shy—as Americans often do—of the perfect tense, especially where no date or time is given. Thus Mr Reagan has woken up to the danger is preferable to Mr Reagan woke up to the danger, unless you can add last week or when he heard the explosion.

In an American context you may run for office (but please stand in Britain), and your car may sometimes run on gasoline instead of petrol. But if you use corn in the American sense you should explain that this is maize to most people (unless it is an old chestnut). People in buses and trains are passengers, not riders. Cars are hired, not rented. City centres are not central cities. Cricket is a game, not a sport. London is the country's capital, not the nation's. Ex-servicemen are not necessarily veterans.

**Make a deep study or even a study in depth, but not in-depth study.** Move towards not toward. Throw stones, not rocks—unless they are of slate, which can also mean abuse (as a verb), but does not, in English, mean predict. Regular is not a synonym for ordinary or normal: Mussolini brought in the regular train. All-Brn the regular man: it is quite normal to be without either. Hikes are walks, not increases. Vegetables, not teenagers, should be fresh. Only the speechless are dumb. Scenarios are best kept for the theatre, postures for the gym, parameters for the parabola.

You may program a computer but in all other contexts the word is programme.

Do not feel obliged to follow American fashion in overusing such words as constituency (try supporters), perception (try belief or view) and rhetoric (of which there is too little, not too much—try language or speeches or grandiloquence if that is what you mean). And if you must use American expressions, use them correctly (a rain-check does not imply checking on the shower activity). Above all, remember that many Americans read *The Economist* because they like to read good English. They do not want to read prose loaded with Americanisms. Nor do most other readers.

- (vii) Do not be sloppy in the construction of your sentences and paragraphs. Do not use a participle unless you make it clear what it applies to. Thus avoid Having died, they had to bury him, or Proceeding along this line of thought, the cause of the train crash becomes clear.

To never split an infinitive is quite easy. Don't overdo the use of don't, isn't, can't etc.

**Use the subjunctive properly:** If you are posing a hypothesis contrary to fact, you must use the subjunctive. Thus, If Hitler were alive today, he could tell us whether he kept a diary.

If the hypothesis may or may not be true, you do not use the subjunctive. Thus, If this diary is not Hitler's, we shall be glad we did not publish it. If you have would in the main clause, you must use the subjunctive in the if clause. If you were to disregard this rule, you would make a fool of yourself.

Do your best to be lucid. Simple sentences help. Keep complicated constructions and gimmicks to a

minimum, if necessary by remembering the *New Yorker's* comment: "Backward ran the sentences until reeled the mind." Mark Twain described how a good writer treats sentences: "At times he may indulge himself with a long one, but he will make sure there are no folds in it, no vaguenesses, no parenthetical interruptions of its view as a whole; when he has done with it, it won't be a sea-serpent with half of its arches under the water; it will be a torch-light procession."

Long paragraphs, like long sentences, can confuse the reader. "The paragraph," according to Fowler, "is essentially a unit of thought, not of length; it must be homogeneous in subject matter and sequential in treatment." One-sentence paragraphs should be used only occasionally.

Clear thinking is, in fact, the key to clear writing. "A scrupulous writer," observed Orwell, "in every sentence that he writes, will ask himself at least four questions, thus: What am I trying to say?"

What words will express it? What image or idiom will make it clearer? Is this image fresh enough to have an effect? And he will probably ask himself two more: Could I put it more shortly? Have I said anything that is avoidably ugly?"

Scrupulous writers will also notice that their copy is subbed only lightly and is likely to be used. It may even be read.

- (viii) Do not commit solecisms.

Agree: things are agreed on, to or about, not just agreed.

Aggression: is a bad thing, so do not call a keen salesman an aggressive one (unless his foot is in the door—or beyond).

Alibi: an alibi is the fact of being elsewhere, not a false explanation.

Alternative: this is one of two, not one of three, four, five or more.

Appeal is intransitive nowadays (except in America), so appeal against decisions.

Anticipate does not mean expect. Jack and Jill expected to marry; if they anticipated marriage, only Jill might find herself expectant.

As of (April 5th or April). Do not use. Instead, write: On (or after, or since) April 5th, in April.

Autarchy means absolute sovereignty. Autarky means self-sufficiency.

Asto. There is usually a more appropriate preposition. Black: in the black means in profit in Britain, but making losses in many other places. Always use in profit.

Both... and: a preposition placed after both should be repeated after and, eg, both to London and to Slough; but to both London and Slough is all right. Centred on, not around or in.

Charge: if you charge intransitively, do so as a bull, cavalry officer or someone, not as an accuser (so avoid: The standard of writing was abysmal, he charged).

Circumstances stand around a thing, so it is in, not under, them.

Come up with: try suggest or produce.

Compare: A is compared with B when you draw attention to the difference. A is compared to B only when you want to stress their similarity (Shall I compare thee to a summer's day?).

Comprise means is composed of. The Democratic coalition comprises women, workers, blacks and Jews. Women make up (not comprise) three-fifths of the Democratic coalition. Alternatively, Three-fifths of the Democratic coalition is composed of women.

Convince: don't use it if you mean persuade. The prime minister was persuaded to call a June election; she was convinced of the wisdom of doing so only after she had won.

Decimate means to destroy a proportion (originally a tenth) of a group of people or things, not to destroy them all or nearly all.

Different from, not to or than.

Due to = (1) owed to, as in: £1 is due to Smith; (2) arranged or timed to, as in: the meeting is due to end on Friday; (3) because of. When used in this sense, it must follow a noun, as in the cancellation, due to rain, of... Do not write It was cancelled due to rain.

Earnings. Do not

these are measured quantities, not individual items.

Estimated: avoid an estimated 300 casualties; prefer about 300 or it was estimated that there were 300.

Finally: do not use this word when, at the end of a series, you mean lastly or, in other contexts, when you mean at last. To write The Dow finally fell below 1200 is absurd because it is now at 1235.

Forgo means do without; it forgoes the e. Forego means go before.

Former: avoid wherever possible use of the former and the latter. It causes confusion.

Gender is a word to be applied to grammar, not people. If someone is female, that is her sex not her gender.

Get: an adaptable verb, but it has its limits. A man does not get sacked or promoted he is sacked or promoted.

Healthy: if you think something is desirable or good, say so. Do not call it healthy.

Hobson's choice is not the lesser of two evils: it is no choice at all.

Hopefully: by all means begin an article hopefully, but never write: Hopefully, it will be finished by Monday. Try: With luck, if all goes well, it is hoped that...

Important: If something is important say why and to whom.

Key: keys may be major or minor, but not low. Few of the decisions, people, industries described as key are truly indispensable.

Last: (1) The last issue of *The Economist* implies our extinction; prefer last week's issue, the previous issue.

Likewise avoid the last issue of *Foreign Affairs*: prefer the latest, current, or (eg) June issue, or this month's or last month's issue. (2) Last year, in 1955, means 1954: if you mean the 12 months up to the time of writing, write the past year. The same goes for the past month, past week, past (not last) 10 years.

Leeway is leeward drift, not space to do a bit of manoeuvring in.

Lifestyle: prefer way of life.

Mete: you may mete out punishment, but if it is to fit the crime it is meet.

Move: do not use if you mean decision, bid, deal or something more precise. But move rather than relocate.

None usually takes a singular verb. So does neither A nor B... unless A or B is plural, as in neither the Danes nor the Dutchman have done it.

Only: put only as close as you can to the words it qualifies, eg, these animals mate only in June; to say that they only mate in June implies that in June they do nothing else.

Overwhelm means submerge utterly; crush, bring to sudden ruin. Majority votes, for example, seldom do any of these things.

Plane: this is a tool or a surface. If it flies it is an aircraft, aeroplane or airliner.

Presently means soon, not at present. Thus: Presently Kep opened the door of the shed, and let out Jimma Puddle-Duck.

Reason should, strictly, be followed by that not why. The reason that you think you should write the reason why is your familiarity with the title "The Reason Why". But that book takes its name from Tennyson's "Their's not to reason why", where reason is being used as a verb.

Scotch: to scotch means to disable, not to destroy (We have scotched the snake, not killed it). The people are Scots or Scottish.

Simplistic: prefer simple-minded, jejune, naive. -style: avoid German-style supervisory boards, etc. Explain what you mean.

Unlike should not be followed by in.

Verbal: every agreement, except the nod-and-wink variety, is verbal. If you mean that one was not written down, describe it as oral.

Warn is transitive, so you must either give warning or warn somebody.

Which informs, that defines. This is the house that Jack built.

But This house, which Jack built, is now falling down.

Which can, however, be used to relieve a sentence already loaded with that's, eg, He recalled that that was the day that he had returned to the family which he had abandoned.

**We keep our blue pencils sharp.**

write earnings when you mean profits (say if they are operating, gross, pre-tax or net). Effectively means with effect; if you mean in effect, say it. The matter was effectively dealt with on Friday means it was well done on Friday. The matter was, in effect, dealt with on Friday means it was more or less attended to on Friday. Fewer (not less) than seven speeches, fewer than seven samurai. Use fewer, not less with numbers of individual items or people. Less than £200, less than 700 tonnes of oil, because

**The Economist**

## OECD ECONOMIC OUTLOOK

## Dollar and debt initiatives provide boost for recovery

THE NEW MOOD of international co-operation between major industrial nations and the improvement in the structure of their economies has significantly helped prospects of a sustained world recovery, the OECD says.

The Organisation's latest Economic Outlook said there are still risks to continued growth, centring on the imbalances caused by the US budget deficits and on the possibility of violent fluctuations in the foreign exchange or oil markets. There also appears little prospect of a rapid solution to the debt crisis faced by developing and newly industrialised nations.

But, in a markedly more optimistic assessment of the outlook than in its last report six months ago, the OECD applauds the recent intervention pact over the dollar agreed by the Group of Five, and the US Baker debt initiative.

It also suggests that the trend of rising inflation over subsequent economic recovery has been broken, with unit labour costs growing more slowly than prices for the past several years.

"While developing country

OECD FORECASTS				
	1984	1985	1986	1987
(1st half)				
Real GNP (percentage change)				
United States	6.8	2.5	2.5	2.5
Japan	5.8	5	3.5	3.25
Germany	2.7	2.25	3.25	2.25
OECD Europe	2.4	2.25	3.25	2.25
Total OECD	4.9	2.75	2.75	2.5
Inflation (percentage change)				
United States	3.2	3	3.25	3.5
Japan	2.1	2.5	1.5	1.5
Germany	2.5	2.25	1.25	1.25
France, UK, Italy, Canada	6.9	6	4.5	4.25
Other OECD countries	6.9	6	4.5	4.25
Total OECD	5	4.75	4.5	4.5
Current balances (\$bn)				
United States	-101.5	-128	-146	-147
Japan	35	48	57	57

OECD Europe	10.5	17	25	29
Total OECD	-63.8	-73	-84	-69

debt and international current account imbalances continue to give cause for concern, there is now a clearly expressed co-operative intent among the major countries to address these issues," it says.

"The recovery looks, as a result, as if it may have a greater chance of proving sustainable than appeared the case six months ago." The OECD stresses that Governments now

need to consolidate and build on the progress so far achieved. "The challenge now is to follow through with internationally coherent economic policies," it says.

It estimates that the US current account deficit and Japan's surplus could run at nearly 4 per cent of their respective gross national products in 1986. West Germany's surplus could amount to 3 per cent

of its GNP. The Outlook says there are limits to the extent that efforts to push down the value of the dollar through intervention and monetary policies can have a durable impact.

The US authority will at some stage have to act to restrain rapid money supply growth if inflation is to be held down. At the same time, higher interest rates in Japan could weaken its economy, when stronger growth was needed.

The central prerequisite for a more balanced world recovery is a significant reduction in the US budget deficit. "Unless this core problem is effectively attacked soon, the attempt wholly by monetary policies to maintain the so far favourable outcome to the Group of Five initiative would indeed risk jeopardising US inflation performance and the Japanese recovery," monetary policy cannot be an effective substitute for appropriate fiscal policy," the OECD says.

The organisation focuses on what it sees as a number of structural improvements in industrial economies which appear to have improved their underlying performance.

Those improvements, particularly the greater flexibility of labour markets and more moderate wage growth in most countries, have brought the longest disinflation in the post-war period. As a result, economies in Europe especially may be less inflation-prone and in a position to benefit from faster growth of nominal demand.

The OECD suggests that the best route to such an expansion would be through a loosening of monetary policy, which would both support demand and, through lower interest rates, would further reduce public sector deficits.

The outlook identifies faster growth in the industrialised world as the key element in a gradual easing of the debt problem. It estimates that a 1 per cent fall in the OECD growth rate over the medium term would require a 5 percentage point cut in interest rates to offset the damaging impact on developing countries.

It also warns of the dangers of an uncontrolled slide in the oil price. A 10 per cent fall in world oil prices would give a small boost to growth in the industrialised world and would put further downward pressure

Reports by Philip Stephens, Economics Correspondent, in Paris

on inflation. But a collapse in prices would increase the risks facing the US banking system, seriously exacerbate the debt position of countries like Mexico, and disrupt energy investment and production in Western nations.

The organisation voices concern at some of the implications of rapid deregulation in financial markets in the industrialised economies. It says such developments have clouded the operation of monetary policy and more seriously, have made it harder for supervisory authorities to preserve the safety and soundness of the banking system.

In its comparison of the present recovery with the four previous upturns, the organisation suggests that the lighter monetary and fiscal policies pursued over the last few years may have paved the way for more balanced and lasting growth.

## Unchanged growth expected in 1987

ECONOMIC growth in the industrialised world should continue next year at a rate of about 2.5 per cent, while annual inflation should edge down from 4.75 per cent this year, to 4.5 per cent in 1986, the OECD predicts.

Its forecasts of economic prospects, based on the assumption that exchange rates and oil prices are unchanged, also anticipates the recovery continuing into 1987, though at a slightly slower pace.

The organisation expects greater convergence of growth rates between the major economies over the next 18 months. US GNP should rise by an annual 2.5 per cent, growth in Europe will average between 2 and 2.5 per cent, and Japanese output is expected to rise by between 3 and 3.5 per cent.

The US current account deficit and the surpluses of Japan and West Germany may widen further in the first half of 1986, but they are then expected to stabilise.

Inflation of 4.1 per cent would be the lowest for 16 years, and the organisation predicts that weakening world commodity prices will continue to put downward pressure on prices in the industrialised world. Non-oil commodity prices have fallen by about 30 per cent in dollar terms since 1980.

The Economic Outlook reports a striking improvement in France's inflation performance, predicting that the annual rate of price rises will fall to 3.25 per cent by the first half of 1987, the lowest level since the 1960s.

The OECD anticipates that world trade will pick up next year, after the relatively sluggish performance seen in 1985, with the volume of trade expected to rise by between 4 and 5 per cent annually over the next 18 months.

It expects US fiscal policy to be broadly neutral in 1986, after four years of stimulus. Elsewhere in the industrialised world governments are expected to continue to cut deficits at about the same pace as in recent years.

## UK pay and productivity threat

HIGH PAY awards and weaker productivity gains pose a serious threat to Britain's international competitiveness and may jeopardise durable progress towards lower inflation, the OECD says.

In its review of Britain's economic prospects, the organisation says that the economic recovery should continue over the next 18 months but that the pace of growth will weaken significantly.

It projects that output will rise by 2.25 per cent next year, down from 3.25 per cent in 1985, and considerably less than the 3 per cent growth forecast last month by the Treasury. By the first half of 1987 the annual growth rate may have slowed to 1.75 per cent.

"This would be the longest period of sustained growth in the post-war period, although it has followed the deepest post-war recession," the economic outlook comments. The forecast, based on unchanged exchange rates and oil

prices, suggests that Mr Nigel Lawson, the Chancellor, will have room for tax cuts of about £2bn in his March budget.

The OECD says that recently announced public spending and privatisation plans represent a loosening of Britain's fiscal policy relative to previous plans. But it expects the Government to seek to hold its public borrowing requirement to around 2 per cent of national income over the next two years.

It shares the Government's optimism that inflation will fall sharply in the first half of 1986 to a level of close to 4 per cent, but expresses serious concern over the outlook for industry's costs.

"Although the short-term price outlook is improving, continuing high wage settlements and a projected weakening of productivity growth mean that unit costs are set to rise at an annual rate of 5 to 6 per cent over the 18 months, substantially more than in the main trading partner countries."

The organisation says that this will damage both competitiveness and employment and may mean that the envisaged progress on inflation will not be maintained.

The effect on competitiveness and company profits will be exacerbated by the recent strength of sterling, which along with slower output growth suggests that unemployment will fall only fractionally from its present high levels.

● Economic growth in four of the five Nordic countries will slow next year with Denmark the exception. Sweden will have the slowest economic growth in the region and 1986 will be a year of falling investment and rising unemployment there. Progress in curbing inflation will depend on wage settlements, with Swedish consumer prices forecast to rise at a slower pace than in 1985.

Unemployment is likely to rise to 3 per cent of the workforce from 2.75 per cent in 1985, but Sweden's trade balance should improve.

the government deficit, and a slight fall in unemployment, while in Finland, GDP growth is expected to slow sharply in 1986 in line with a slowdown in world export markets, and lower fixed capital formation and stockbuilding.

Iceland's prospects for curbing a 31.5 per cent inflation rate and improving its trade balance have worsened. Denmark's economy is likely to show a further reduction in

## Little hope over jobless improvement

THE MAIN TASK facing the industrialised world is to bring down unemployment without re-igniting inflation, the OECD said.

In a sombre assessment of the prospects for unemployment, the organisation predicts that despite faster job creation in most economies, the unemployment rate throughout the OECD is likely to remain unchanged at an average 8.1 per cent over the next 18 months.

The actual number of people without jobs, is expected to rise slightly from just under 31m in 1985 to 31.5m by the first half of 1987, and the gradual convergence of economic growth rate is unlikely to narrow the wide disparity in unemployment.

In the US the number of people out of work is projected to stabilise at around 7.5 per cent while in Japan it could

edge up from the present 2.5 per cent to 2.75 per cent.

For Europe, which already has the highest jobless rate for 50 years, unemployment is likely to remain at 11 per cent, or just over 14m people, accompanied by what the OECD calls growing polarisation of labour markets.

While long-term unemployment as a proportion of the total number of people without jobs has fallen recently in the US and Japan, it has increased further from already high levels in many European economies. This has led to a growing split between employed persons with stable work and job seekers who may be becoming progressively less employable.

This segmentation, which is particularly apparent in the UK, could severely weaken the impact on high unemployment of wage moderation, the OECD says.

## RESOURCES REVIEW

## What lignite means for Northern Ireland's economy

UNLIKE her political nightmares, Northern Ireland's underlying economic difficulties seem suddenly to have been transformed by the tantalising prospect of an abundant source of cheap energy.

It consists of extensive deposits of lignite, or brown coal, which could be used to generate the province's electricity far more cheaply than

imported oil, or the conventional British coal to which Northern Ireland's biggest oil-fired power station is being converted.

Lignite, found in many parts of the world, is a member of the solid fuel family with a calorific value midway between coal and peat. Formed, like coal, from decayed trees and plants, it is usually found in

long seams, and most of it is extracted by strip mining. It is estimated that Ulster's lignite could be mined for half the cost of UK deep mined coal. But unlike coal, it is hard to transport long distances, since it piles off a lot of dust and has a greater liability to spontaneous combustion. Most of it is therefore used in mine-mouth power stations.

The Northern Ireland Department of Economic Development is in the process of awarding exploration licences for three or four other large deposits which could raise the province's total reserves to 1bn tonnes and offer the prospect of more cheap electricity in the 21st century.

BP Coal International, part of British Petroleum, is earmarked to receive the licence for Coagh on the western shore of Lough Neagh, regarded as being at least as good as the licences at Crumlin. However, the prospecting companies will have to work hard to catch up with Burnet and Hallamshire, which has a seven-year lead in preparing to exploit its deposits.

The speed with which the lignite is exploited will also depend on the enthusiasm of Northern Ireland Office politicians who, to the despair of some civil servants, are rarely based in Belfast long enough to take expensive, long-term investment decisions.

Last February, the Northern Ireland Economic Council (a body resembling the NEDC in Whitehall), published a report predicting that by the year 2000 Northern Ireland could be

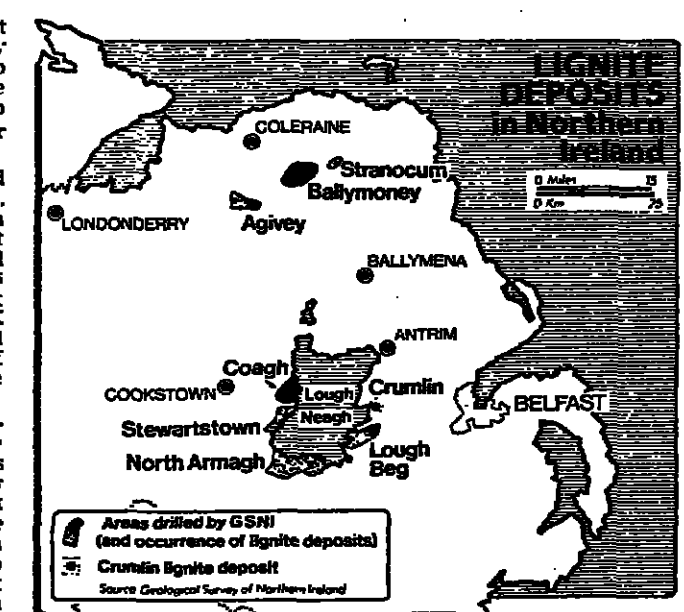

transformed from an oil to a lignite-based primary energy user. "In terms of world energy, this would imply a move from a high to a low price regime," it said.

However, such euphoria at the attendant difficulties and uncertainties are not clearly recognised. First, the time factor: even if the new exploration programme is successful, the full benefit of cheaper electricity prices will start to be felt only in the mid-1990s. Until then, the electricity industry will give priority to converting much of its oil-fired capacity to coal.

Although coal is dearer to produce than lignite, in the short term it would be cheaper, as well as safer, to convert existing oil-fired capacity to coal, rather than build lignite plants for a process that is new to the UK. The National Coal Board anxious to make up for its declining markets elsewhere in the UK argues that an additional 600 MW of capacity at Kildrum power station could be adapted to coal in three years for about £125m, compared with the seven year lead time and much higher cost of a new mine-mouth lignite plant.

Secondly, it is claimed that much research needs to be carried out into the best way of extracting and processing the Ulster lignite.

Mr Alec Gains, a coal chemist familiar with the properties of

## The cautionary tale of Great Plains

with capacities between 3MW and 900 MW run by 33 utilities. No fewer than 17 lignite power stations have been commissioned in the US in the past decade, and another 16 are planned between now and 1993.

Gasification of lignite is carried out on a large scale in West Germany and there is an experimental plant in Scotland. However, the economics of such schemes are extremely sensitive to fluctuations in local and international prices for gas. This is symbolised by the fate of the 82 US gasification project at Great Plains, North Dakota, which was mothballed almost as soon as it became capable of producing pipeline quality gas a year ago.

For Northern Ireland, which has had no lack of its own industrial white elephants, the lesson of Great Plains should be obvious. It serves as a further reminder that it should evaluate its new found energy wealth with caution as well as confidence.

# Transport union swings to right in elections

BY PHILIP BASSETT, LABOUR CORRESPONDENT

CONTROL of Britain's largest union, the Transport and General Workers' Union (TGWU), is shifting to the right in a move which is likely to have important consequences for the Trades Union Congress (TUC) and in particular for the Labour Party.

The most marked indication of the shift is the defeat of Mr Walter Greendale, the union's chairman, in elections for its general executive council. Government ministers have shown close interest in the results of the TGWU elections.

TGWU election results are not publicly announced, but Mr Greendale's defeat - the first ever of a sitting chairman in the TGWU - was privately welcomed last night by close supporters of Mr Neil Kinnock, the Labour Party leader. They believe it will allow a greater degree of flexibility in the TGWU which could be vital for the party's chances in the next general election.

The Kinnock supporters also believe the result may play a further part in the TUC to adopt its present policies, particularly towards the Government's labour laws and the issue of ballots.

Mr Greendale, a hard-left supporter of Mr Tony Benn, the Labour left-winger, has been a significant influence in the TGWU and on the union left, although Mr Ron Todd, TGWU general secretary, has been acting more independently from him of late than is generally realised, even within Labour politics.

Mr Greendale's narrow defeat in his own Humberside and East Coast region by about 700 votes is in line with acceptance by the TGWU of the Government's labour legislation on executive elections. It also accords with the TUC's clearly indicated shift away from its opposition to taking government money for internal union ballots.

One close TGWU supporter of Mr Todd said yesterday that Mr Green-

dale's defeat would allow the union to begin adopting sensible policies. "The union is voting the moderate, middle of the road Labour ticket."

Mr Brian Nicholson, TGWU vice-chairman, and a strong supporter of Mr Kinnock, will run for the union's chairmanship. The TGWU hard left is likely to draw round Mr Danny Duffy, re-elected in Scotland, as its candidate.

Members of Britain's second largest union, the Amalgamated Union of Engineering Workers, have voted by nearly eight to one to endorse the union's acceptance of taking government money to fund postal ballots, Helen Hague writes.

The union's acceptance of £1.2m of government funds to finance ballots earlier this year brought it close to suspension from the TUC for breaching the policy of opposition to the Government's labour laws.

## Mergers board may study BET bid

By Charles Batchelor

MR LEON BRITTON, Trade Secretary, is today expected to refer the £120m takeover bid from BET, the construction, laundries and publishing group, for SGB, Britain's largest scaffolding company, to the Monopolies and Mergers Commission.

A referral would effectively block the Bet bid for six months. BET's offer would automatically lapse but it would be free to resume its pursuit of SGB if the commission cleared its bid.

The inquiry is expected to centre on the concentration within the fragmented £650m scaffolding industry which would result if the two largest participants merged.

SGB and BET would account for 17 per cent of the UK market, according to BET's calculations, but the larger companies have in general lost market share to smaller operators.

The number of scaffolding companies has risen from 600 to 1,300 over the past six years.

SGB has strongly resisted the BET bid, launched on October 23, and has forecast an increase of at least 33 per cent in its pre-tax profits to £10m in the year ending September 1986.

BET yesterday said its present offer would not be increased and would not be extended beyond January 10 after gaining acceptance from the owners of 17.2 per cent of SGB's shares and increasing the number of shares it owns to just under 15 per cent.

The Kuwait Investment Office, which invests Kuwait's oil wealth, emerged as the owner of a 6 per cent stake in SGB on Wednesday and was believed to have continued buying SGB shares yesterday.

## After the final curtain, all the world's a stage.

Now that the Financial Times is printed in the U.S. you can get the next day's edition well before midnight in New York's theatre district. At many newsstands or from one of our unabashedly pink dispensers.

It makes a grand finale to an evening on the town. Urbane, astute, well-informed and insightful, the FT is a splendid company over a nightcap.

And not just for its illuminating discourse on affairs of high finance and business. The FT is nothing if not well-rounded. Each day there are reviews, commentary and

observations on artistic and cultural events. And the Arts Guide tells you what's taking place when—in major cities in scores of different countries.

Yes, all the world is a stage to the FT. Don't miss a performance. Monday through Saturday!

## Acas move in schools dispute

BY DAVID BRINDLE, LABOUR STAFF

THE TEACHERS' pay dispute in England and Wales looks set to be referred to the conciliation service Acas after the intervention yesterday of Mr Norman Willis, general secretary of the Trades Union Congress (TUC).

At a meeting at Congress House, TUC headquarters, Mr Willis made it clear to leaders of the National Union of Teachers and the National Association of Schoolmasters/Union of Women Teachers that they had a responsibility to pursue the standing Acas offer of exploratory talks.

Previously, the two TUC-affiliated teachers' unions had been reluctant to take up the offer. After the

meeting, however, they said in a joint statement they would "consider a positive response."

The intervention of Mr Willis, coupled with a renewal yesterday of the Acas offer, came as hopes of settlement of the 10-month-old pay dispute hit a fresh low with strong criticism of the unions by Sir Keith Joseph, Education Secretary.

In a letter to the employers, Sir Keith said the 9.9 per cent full-year demand tabled by the smaller, majority unions in last Tuesday's pay talks "suggests to me that they are more interested in striking postures (and shoring up the false expectation they have raised) with their

members than in negotiating a pay settlement."

As expected, Sir Keith told the employers that he did not see how their proposal of a pay inquiry would produce an early settlement in view of the union's attitude.

One idea being floated yesterday was that Acas offered the Government a route to an inquiry—an idea favoured by some ministers—with-out losing face.

Under the Employment Protection Act 1975, Acas can use "any appropriate agreed procedures" to resolve disputes and could call an inquiry without the Government's involvement.

## Measures urged to curb accounts abuse

BY GEORGE GRAHAM

MEASURES to prevent companies from dressing up their accounts to mislead investors have been proposed by the leading UK accountancy body.

The Institute of Chartered Accountants in England and Wales has published guidelines to auditors which it hopes will put an end to artificial arrangements which are not disclosed in a company's balance sheet and to the "window dressing" of accounts.

The institute's technical committee said off-balance sheet finance and window dressing have the potential to mislead users of financial statements, and that in certain circumstances these practices may verge on the fraudulent.

It advises auditors to consider the economic substance of a transaction, and not just its legal form, when deciding on the appropriate accounting treatment.

Some accountants believe that auditors are already at legal risk if they accept off-balance sheet finance and window dressing, because they have not complied with their legal obligation to ensure that accounts present a true and fair view.

There has been concern, however, at a statement by the Department of Trade and Industry (DTI)

relating to a case involving Argyl Foods, which stressed that "any emphasis on substance over form must not be at the expense of compliance with the law."

The DTI has given its support to the institute's new approach to the problem, and said it rejected any suggestion that this approach was inconsistent with its Argyl Foods statement.

One common form of off-balance financing is the non-subsidiary-dependent company. If a company is set up which is controlled fully by its parent, but is technically not a subsidiary, its assets and liabilities may be excluded from the consolidated financial statements.

● The Accounting Standards Committee has broken with its traditional reliance on internal discipline by calling for legislation to compel companies to make adjustments for inflation in their accounts.

"We have exhausted our powers of persuasion," Mr Michael Renshall, vice-chairman of the ASC, said last night. "If companies are to be persuaded to give the information that they should, some powerful agency is needed—and that has to be the Government and the lawmakers."

## Allied Lyons to invest £45m in cafe-bars

BY LISA WOOD

ALLIED LYONS, the food and drinks conglomerate which is fighting a takeover bid by Elders DLI, the Australian group, is to invest £45m in its US-style chain of restaurants.

The cafe-bar-restaurant chain, called Calendars, was launched in May 1984 in Watford, north of London, by Vittle Inns, the retail catering division of Ind Coope, a subsidiary of Allied Lyons.

Under the expansion programme 24 more Calendars will be built in the next seven years, the majority in the south east. Vittle Inns also operates two other restaurant chains, Chester Steak Bars and Exchange Restaurants.

Mr Hugh Campbell, joint managing director of Ind Coope said: "We developed the idea of Calendars by looking at eating out in America. The Calendar restaurant is not a public house serving food. It is a purpose-built outlet, primarily aimed at 20 to 35 years olds, where people can eat and drink."

The provision of food by Britain's brewers, both in terms of pub food and restaurants is one of the fastest growing areas in the UK catering industry. Food sales via bar snacks, food counters and pub restaurants grew from £262m in 1977 to £1.5bn in 1984 according to a recent report from Euromonitor, the market research organisation.

## Unions to urge Ford pay offer rejection

FORD UK's 37,000 hourly paid workers will be urged next month to vote for industrial action, in rejection of the company's "final" pay and productivity offer, writes Helen Hague, Labour Staff.

Mass meetings will be held at plants on January 13—followed immediately by secret ballots. These will be conducted separately by the individual unions which make up the joint negotiating committee, and collated to produce a company wide picture of members responses to the call for industrial action.

The electricians' union EETPU is to ballot its members by post.

In previous industrial action calls, Ford unions have voted plant by plant not to union on whether or not to take action.

RESEARCH commissioned by the Think British Campaign—which tries to encourage Britons to buy British quality goods—shows marked increases in import penetration of UK consumer markets during 1985.

Figures produced for the campaign by Mintel, the research body, reveal that 84 per cent of iron are now imported, compared with 70 per cent in 1984.

The survey found that 87 per cent of toasters, 86 per cent of luggage and 88 per cent of sports equipment bought in Britain now originate abroad.

"Home production of hand-held calculators, typewriters and car radios appears to have been lost," said a spokesman for the campaign, run by the Think British Council, which is backed by 85 companies and associations.

THE BRITISH Apparel Centre has been set up in London, bringing the industry's production and marketing arms together under one roof. Mr Barry Reid, chairman of the British Knitting and Clothing Export Council said the move represented a "further major step forward" in the creation of a stronger clothing industry.

AN ATTEMPT is to be made to have Mr Jim Raper, the financier, jailed for alleged contempt of court.

An application by the Liquidator of Savings and Investment Bank for committal and sequestration orders against Mr Raper and Mr William Allen, one-time director of Mr Raper's company St Piran, was adjourned by the High Court yesterday until January 15 for evidence to be completed.

SIB alleges that the two men broke an undertaking not to reduce the assets of St Piran or its subsidiaries below £7m. SIB also seeks a sequestration order against St Piran.

CADBURRY Schweppes, the UK drinks and confectionery group, yesterday entered into an agreement in principle with Coca-Cola, the world's largest soft drinks company, for the two to form a joint company to handle all their soft drink brands in the UK.

A joint company would have over 25 per cent of the UK fizzy drinks market.

## We're giving non-stops the green light.

# Retailers expect record spending for Christmas

BY DAVID CHURCHILL, CONSUMER AFFAIRS CORRESPONDENT

BRITAIN'S retailers are confident of a record-breaking level of spending in the shops this Christmas, according to the latest joint Confederation of British Industry and Financial Times survey of the distributive trades.

The survey confirms other reports from retailers in recent days that the level of pre-Christmas spending is well above last year.

The buoyancy of consumer spending appears to be drawing in extra imports of consumer goods and the CBI warned yesterday that import penetration, according to the survey, was at its highest since the survey was launched two years ago.

"This must be at the expense of British manufacturers even though we have had growth in the manufacturing sector," said Mr Ken Edwards, a deputy director of the CBI. The survey also reveals that the extra demand from shoppers is leading to retailers employing more workers, both full time and part time, than they did a year ago.

The main thrust of the survey remains the expected buoyancy of spending in December. "There is no doubt that sales will be in excess of last year's record figures," Mr John Salis, chairman of the CBI's survey panel, said.

The survey covers responses from 590 companies in the distributive trades and was conducted between November 20 and December 10. The survey includes wholesalers and motor traders.

The 288 retailers in the survey reported that their sales volumes rose more strongly in November than in October but were still not quite as good as had been expected. Faster growth is expected in December.

Some 68 per cent of retailers reported that sales were higher than a year ago against 13 per cent who reported them lower, giving a balance of plus 55 per cent. Footwear, clothing, and food retailers reported the biggest increases. The confectionery, tobacco and newspaper sector was the only sector reporting sales lower than a year ago and expecting a fall in sales in December.

For retailers as a whole, a balance of plus 60 per cent anticipated increased sales volumes in December.

The volume of orders placed by retailers with their suppliers in November was a little better than expected but slightly slower growth in orders is expected in December. A balance of plus 38 per cent placed a larger volume of orders in November than a year ago and a balance of plus 25 per cent expects increased orders in December.

After an easing of import penetration in August, growth in imports as a proportion of deliveries to retailers increased in November. Footwear shops and off-licence drink shops in particular reported strong increases in imports.

Retailers were more optimistic about investment in their industry, with a balance of plus 28 per cent expecting to authorise more capital expenditure over the next 12 months. This was the largest balance for nearly two years.

The balance of retailers reporting employment higher than a year ago fell from plus 34 per cent in August to plus 27 per cent in November. However, a balance of plus 32 per cent on expectations of higher employment points to slightly faster recruitment in the coming months.

## Recovery regaining momentum

THE WORLD economic recovery has regained some of its momentum after a temporary setback in the first half of this year, the Bank of England says in its latest quarterly bulletin published yesterday. It predicts a combination of falling inflation and slow but steady growth for the world economy in 1986 and 1987. The Bank suggests the main industrialised economies have benefited greatly from falling commodity prices and subdued labour costs.

The initial effect of falling commodity prices has been to reduce import prices, sometimes in absolute terms, and to raise profits. It says this should provide an incentive, and enhance the means to invest more, produce more and employ more.

Although weak commodity prices have raised the real incomes and reduced the inflation of industrialised countries, they have aggravated the problems facing debtor countries, the Bank says.

It also warns that the considerable slowdown of world trade growth since 1984 is likely to impair the external environment of developing countries and the smaller industrialised economies in particular.

In the face of falling real oil prices, Opec countries may need to cut back import volumes by 15 per cent between 1984 and 1987.

The Bank says output growth in the main industrialised countries probably picked up to an annual rate of about 3½ per cent in the second half of this year, having declined to about 1 per cent in the first half.

It predicts steady real growth of about 3 per cent a year in 1986 and 1987 - about the same as the overall output for 1985. Inflation in the big economies is expected to fall to just over 3 per cent next year.

Japan is expected to out-perform both Europe and the US and grow at an annual rate of 4 to 5 per cent between 1985 and 1987. The US is not forecast to grow by more than 2½ per cent next year although the

dollar's depreciation since February should feed through into faster growth by 1987.

The Bank suggests continental Europe may do a little better than the US next year with growth edging up from just under 2 per cent in 1985 to just under 3 per cent in 1986.

Unemployment is forecast to remain high in most countries in spite of the continuing world economic recovery. However, it says, a fall in unemployment is more likely in West Germany.

The Bank suggests that in such circumstances earnings growth in every big economy besides the UK is likely to be modest. On average, unit labour costs in manufacturing

are unlikely to grow at an annual rate of more than 2 per cent between 1985 and 1986.

Although developing countries have been adversely affected by weak commodity prices, the latest figures compiled by the Bank suggest there has been a small improvement in both their current and capital external accounts.

Current accounts benefited from falling US interest rates, and capital accounts from a modest resumption of net new borrowing in the second quarter.

South east Asian countries also attracted increased portfolio investment.

## Optimism on G5 meeting and Baker debt plan

THE BANK strikes a deliberately optimistic note in assessing the impact of the Group of Five leading industrial countries' finance ministers' meeting in New York in September and the subsequent initiative on international debt announced at Seoul by Mr James Baker, the US Treasury Secretary.

"The future is in some ways less dangerous than it might have been feared some months

ago," it says. The Bank is particularly gratified by the sharp realignment of currencies since the G5 agreement that exchange rates should better reflect fundamental economic conditions.

Between the G5 meeting and the end of November, the yen rose by 17 per cent against the dollar and the D-Mark by 13 per cent.

The Bank praises the US Administration for its resistance to

protectionism and the Japanese Government's fiscal and monetary action to raise the yen's value. However, it admits "policy in Europe has been less active."

The bulletin warns that in spite of the G5 accord world economic prospects remain threatened by the "large and growing" external imbalances of the main economies.

The Bank points out that the US current account deficit and

the surpluses of Japan and West Germany are continuing to widen. However, there are some indications that the present level of the dollar might be consistent with a stable US trade deficit.

Mr Baker's Seoul initiative on international debt which aims, under certain conditions, at a modest resumption of bank lending to debtor countries is hailed by the Bank as a "significant shift in US attitudes."

## Gloomy outlook seen over jobs, output and pay settlements

THE BANK paints a gloomy picture of British economic prospects. It expresses great concern about the persistent pattern of high pay settlements and says there are signs that the growth of both output and employment has slowed.

It suggests the outlook for UK exporters is less encouraging than a year ago, partly because of a 9 per cent loss of competitiveness but also because British export markets are growing more slowly than world trade as a whole.

The Bank is also experiencing continuing difficulties in controlling the monetary aggregates. The expansion of broad measures of money, it says, implies "a potentially worrying build up of the liquidity of the private sector."

And although the Bank forecasts a fall in retail price inflation to 3½ per cent by the middle of 1986, it sees little sign of a further abatement of domestic cost pressures.

In its view, the UK is failing to reap the full benefits of the fall in world commodity prices. The growth of average earnings has failed to respond to a fall in import prices and the terms of trade gain is likely to be "progressively transferred from profits to wages over the next year or so."

The Bank argues that British wage behaviour is "out of line with that of other industrial countries" and criticises the inertia that has resulted in annual average earnings growth of 7 to 8 per cent for three full years, despite high and rising unemployment.

It says real incomes for those in work have risen at an annual rate of 2 per cent since 1980, faster than in the previous five years and faster than in any other big country except Japan.

The combination of declining

competitiveness and high unemployment and this wage behaviour is creating "acute dilemmas" for policy. But the Bank rejects calls for lower interest rates or a weaker pound, arguing that this would provide only temporary and inflationary relief from competitive pressures.

Given the stability of wages abroad, it suggests that only a significant reduction in pay settlements can create a lasting improvement in competitiveness, if progress on eliminating inflation is to be maintained.

With the rebound from the year-long coal strike, which ended in March, almost complete, the Bank sees signs that the economy's underlying growth rate has slowed. Since the first quarter of 1985, it says, output has been rising at an annual rate of only about 1 per cent.

In the previous six months, the underlying growth rate has been almost 4 per cent.

The slowdown in output growth has been accompanied by slower employment growth. The Bank points out that while part-time female employment has continued to rise, the number of male employees has fallen.

If two part-time jobs are assumed to be equivalent to a single full-time job, the Bank calculates that the total number of "full-time equivalent" employees has declined this year.

The Bank suggests the recent downturn in export volume is disappointing because it comes at a time when the large overseas markets for manufactures are continuing to expand. The sharp fall in Opec imports coupled with the weak demand from smaller industrialised countries may have had a disproportionate impact on UK trade, it says.

## Samsung interested in setting up UK consumer goods plant

BY NICK GARNETT, NORTHERN CORRESPONDENT

SAMSUNG ELECTRONICS, part of the big Korean Samsung group, wants to set up a manufacturing facility in the UK making consumer electronic products.

The company is thought to be interested in manufacturing video recorders, televisions and microwave ovens and has shown interest in both the north-east and the West Midlands as possible locations.

A delegation is due to arrive in the UK from Korea early in the new year.

Samsung has only small market shares in the UK but has just completed an eight-week £1.5m television advertising campaign for its stereos, televisions, videos and microwave ovens. The company imports 14 in (35 cm) televisions from its sole European manufacturing site in Portugal.

The company, which also makes

computers and refrigerators in Korea, is also expected to announce shortly that from a standing start it has taken 4.5 per cent of the UK microwave oven market with Korean-made products. It said yesterday that it wanted to raise that next year to between 7 and 8 per cent.

The colour television market in Britain is booming, with between 3.3m and 3.5m units sold this year, the highest ever. Video recorder sales, which were running at over 2m units, have passed their peak and sales this year are expected to be about 1.5m.

The market suffers from manufacturing overcapacity and BET recently announced the closure of its Rediffusion manufacturing plant. There are at least eight Japanese companies making televisions or videos in the UK.

Thorn EMI, with plants in southern England and a video manufacturing operation at Newhaven on the south coast owned in conjunction with JVC and Telefunken, is the biggest supplier of colour televisions and videos in the UK, with about 25 per cent of the market.

Philips is second in televisions and is challenging Panasonic for the second place in videos.

Hitachi is probably the third largest television manufacturer in the UK, followed by a clutch of Japanese companies making televisions and videos, including Sony, Toshiba, Mitsubishi and Sanyo. Sharp opened a video recorder plant at Wrexham this year.

The rapidly expanding Samsung group is the largest Korean conglomerate, accounting for one tenth of Korea's Gross National Product.

## BT to end monopoly on telephone wiring

BY JASON CRISP

BRITISH TELECOM (BT) has agreed to give up its monopoly to install and own the telephone wiring in homes after the first socket. Early next year the Office of Telecommunications (OfTel) will announce the ending of the monopoly and will change BT's licence.

The liberalisation will not be officially permitted for a period of three to four months. This is to give companies time to produce do-it-yourself packs for people to put in their own extensions. BT already has bubble packs of do-it-yourself extension sockets ready for the liberalisation.

BT is understood to be happy to lose this monopoly as it says it does not make money putting in extensions. BT charges £28.75 to convert conventional wiring to plugs and sockets. Two extra sockets brings the total to £52.50.

The high price of installing sockets is also thought to have depressed sales of telephones to the domestic market. Private contractors and telephone suppliers are expected to undercut BT's rates.

BT will retain the monopoly to install the first socket, which marks the boundary of the public network. The Telecom Dealers Association

(TDA) yesterday called for the complete liberalisation of British Telecom's monopoly of domestic telephone wiring, including the primary socket.

The TDA estimates that a complete liberalisation would stimulate competition which would generate new business of £138m. Some £74m of equipment and installation fees would be lost if BT retains the monopoly for the first socket.

OfTel, however, is not empowered to change the part of the licence which covers the monopoly for the termination point. It is thought any change would require a ruling by the Trade and Industry Secretary and might need parliamentary approval.

Possible problems of liberalisation include the definition of the public network and disputes over where a fault on someone's telephone line lies.

The TDA - apparently unaware that the decision has been taken - said yesterday: "Failure to de-monopolise the master socket would prevent the consumers from making substantial savings; it would deny them freedom of choice; and it would mean they would still be subject to long waiting times."

## Royal Bank in 'one-stop' pension scheme

By Eric Short

THE ROYAL Bank of Scotland in conjunction with the Wyatt Company, a leading firm of international pension consultants, has launched a comprehensive pensions service available to all employees.

Known as the Complete Pension System, the service, claimed to be the first available in UK pensions, offers all the required services for company pensions within one system - a one-stop shopping system for company pension provision.

Royal Bank claims that the scheme contains all the services and expertise required for setting up and operating a pension scheme on a self-administered basis. Wyatt would be responsible for the administration and consultancy, while Royal Bank of Scotland would provide the investment and the cash handling facilities of contributions and benefit payments.

All company pension schemes are set up under trust. Under this system, approval has been obtained from the Inland Revenue to establish schemes under a single trust, with the Royal Bank of Scotland as corporate trustee. Thus the company is not faced with the problems of setting up a trust for its pension arrangements.

## GM appoints new chief for Bedford

BY KENNETH GOODING, MOTOR INDUSTRY CORRESPONDENT

GENERAL MOTORS of the US has appointed another American as chief executive of Bedford, its commercial vehicle subsidiary in Britain.

He is Mr Paul Tosch, 45, who has spent his career with GM's car division, based in the Detroit area. Since 1984 he has been chief engineer for GM's Flint luxury product team in Detroit, set up as part of a reorganisation of the group's car operations in the US.

Bedford is now part of the GM's world truck and bus organisation, based at Pontiac, Michigan, which

is headed by another former executive from Fisher Body, Mr Charles Katko.

Mr Tosch succeeds Mr J.T. Battenberg III, who was recently promoted within GM and recalled to the car business in the US after 2½ years as Bedford's chief executive.

Mr Tosch takes over Bedford at a time of negotiations between GM and the state-owned BL group in Britain that might lead to the acquisition of the Leyland truck operations by GM, which would then merge the businesses.

In the past 2½ years, Bedford's

van operations at Luton, Bedfordshire, have been rationalised at the cost of about £50m and truck capacity at nearby Dunstable has also been reorganised and cut from 50,000 vehicles to 30,000 a year.

That expensive transitional phase has contributed to Bedford's huge losses - £62.4m last year compared with £59.2m in 1983.

Bedford set itself the target of returning to an operating profit next year, but Mr Battenberg recently said the organisation would have great difficulty in meeting that objective.

The Falcon 100.  
The million dollar difference  
becomes sky-high  
at 45,000 feet and mach .85.

Where else but in the air can you truly appreciate the safety of your business jet? If it takes you through storms, ice, high altitude turbulence without having to alter its speed or course, it is because it has been built exceptionally strong to weather the toughest conditions and more; this is where it differs from its competitors. The only business jet built alongside some of world's best performing military aircraft had to offer more safety and strength to airline standards and beyond. You've chosen total safety and reliability. You're flying the Falcon 100.

Fast - very fast - in fact the fastest of all business jets, the Falcon 100 makes for considerable time savings on long trips, but it also features

unequalled safety and ease of handling at low speeds. The slower a landing, the safer it is. Only two business jets are as slow as the Falcon 100; one is just slow, in the cruise too, the other is a further Falcon model. Ease of handling for the pilot, safe use of many short and difficult runways off-limits to other jets. You've chosen the leading edge in safety and performance. You're flying the Falcon 100.

And moneywise the Falcon 100 guarantees you the best possible protection for your investment, especially in terms of its resale value, universally recognized and appreciated by operators. You've chosen a safe and solid value. You're flying the Falcon 100.

Safety, performance, high resale value - all

advantages that explain why industry's leaders - including IBM, Sony, Rank Xerox, Saab, Volvo and many more - have chosen the peerless Falcon 100.

Business takes off with Falcon

## THE FINANCIAL SERVICES BILL

## Radical overhaul outlaws unauthorised investment business

BY JOHN MOORE, CITY CORRESPONDENT

THE MOST radical overhaul of investor protection legislation in the UK for 40 years would make it a criminal offence for anyone to carry on investment business without authorisation.

A new regulatory system proposed in the Financial Services Bill would impose fines and up to two years' imprisonment for those who do.

Details were unveiled yesterday when the Government presented its Financial Services Bill to parliament.

Anyone making a false or misleading statement with the intention of inducing someone to enter into an investment agreement or to engage in any act or course of conduct which deliberately creates a false or misleading impression of the price or value of an investment would be committing a criminal offence. Those convicted of such an offence would face fines or imprisonment of up to seven years, or both.

The bill exempts public bodies which perform investment business in the course of other duties; the society of the Lloyd's insurance market and its underwriting agents as far as investment business is concerned; and representatives or agents for whom an authorised business takes responsibility.

If anyone operates without being authorised in the new regulatory regime the offending business would also be unable to enforce its contracts. The Secretary of State for Trade and Industry would be able to apply to the courts for an injunction to prevent a person from carrying on business or a restitution order requiring it to repay any profits from carrying on such business.

The order would require the business to meet any losses incurred by investors because of the way in which the business was conducted. Under the legislation the Secretary of State for Trade and Industry would be given powers to authorise and regulate the conduct of investment business. Other powers would enable the Secretary of State to transfer the majority of his powers to one or more designated agencies.

A new main board is to be evolved, yet to be named, which would be the designated agency provided that the Secretary of State was satisfied that it was able to implement the transferred powers in a way which would provide an adequate level of investor protection. The rules of the board would have to satisfy the Secretary of State that they would not be anti-competitive to any extent greater than is necessary for investor protection.

The chairman and members of the agency should be appointed jointly by the Secretary of State and the Governor of the Bank of England. The transfer of functions would be subject to parliamentary approval.

## Becoming authorised

The agency or board would itself be able to authorise "fit and proper persons" to carry on investment business. It would also have the power to withdraw or suspend authorisation if a person ceased to be "fit and proper" or breached the rules which applied to him.

It is expected that most investment businesses will opt to join one of the practitioner-based self-regulatory organisations which would be recognised by the agency or board under the bill. To qualify for recognition, a self-regulatory organisation would have to satisfy the agency that its rules and enforcement of those rules provided investors with protection at least equivalent to that provided by the agency.

Each recognised self-regulatory organisation would normally regulate only certain types of investment business, unless they were also members of another self-regulatory organisation or directly authorised.

For some businesses, with a wide range of investment activities, may have to join several self-regulatory organisations. If a recognised self-regulatory organisation failed to enforce its rules, the Secretary of State for Trade and Industry would be able to apply for a court order directing it to amend its rules or to improve its enforcement of them so as to ensure that investor protection was brought up to the required standard.

Alternatively, the agency would be able to restrict the types of investment business regulated by the self-regulatory organisation concerned or, if necessary, remove its recognition altogether.

Membership of a professional body, such as accountants and solicitors, carry on some investment business incidentally to their profession. They are already subject to the discipline of their professional bodies and the bill would allow these bodies to apply for recognition. If a body was recognised, all its members except those whose the body had withdrawn permission to do investment business, would be authorised.

To obtain recognition, a professional body would need to satisfy the agency that its members would be subject to a self-regulatory organisation.

Its rules would need to restrict the investment business carried on by its members by virtue of their membership to activities which are incidental to the practice of their profession.

A FRAMEWORK for effective investor protection in Britain's financial community was unveiled yesterday by the Government and the City. The Financial Services Bill was published yesterday detailing the most radical changes proposed for investor protection in 40 years.

At the same time the Securities and Investments Board and the Marketing of Investments Board published more detailed proposals about the operation of the new regulatory structure.

The Government also published a consultative document on the role of auditors in the financial services

sector which sets out the proposed relationship between auditors and supervisors. The Government has concluded that the auditor plays a major, if secondary role, in the fight against fraud.

The new legislation would make it a criminal offence for anyone to carry on investment business unless they had gained authorisation within the regulatory framework.

Mr Leon Brittan, Secretary of State for Trade and Industry, said yesterday that the legislation brought the law up-to-date and extended its coverage to include a wider range of investments. It provided a flexible system of regulation which would be able to respond to changing circumstances without inhibiting change or leaving investors exposed to risks not foreseen when the legislation was drafted.

The bill would enable the Secretary of State to transfer his powers to a designated agency. That agency would be able to recognise self-regulating organisations whose standards must be at least equivalent to those of the agency. If the self-regulating bodies did not live up to the required standards, their authority to regulate their own members could be withdrawn.

investment business. Both would have powers to obtain documents and to question the business and people connected with it.

Confidentiality of information obtained under the act would be an offence, except in specified circumstances — for example, to enable criminal or civil proceedings to be pursued or to assist other financial regulators.

Prosecutions. Only the Secretary of State and the Director of Public Prosecutions would be able to prosecute criminal offences.

Competition. The bill provides a special regime for the application of competition policy to the financial services sector. All the rules of the agency and of recognised self-regulatory organisations, investment exchanges and clearing houses would be examined by the Director General of Fair Trading, who would advise the Secretary of State whether they were anti-competitive. If they were, the Secretary of State would have to consider whether the anti-competitive effect was greater than was necessary for investor protection. If it was, the Secretary of State would not be able to transfer powers to the agency, or to recognise the body concerned.

International obligations. The anti-competitive effect was the bill would enable the Secretary of State to direct the agency to take any action necessary to comply with the UK's international obligations.

Reciprocity. The Secretary of State would be empowered to prevent a financial firm from any foreign country from doing business in Britain (in the banking and insurance as well as in the investment sectors). If UK firms were not given access to that firm's home market, equivalent to that provided by the UK.

Companies Act. The bill would amend certain provisions of the Companies Act concerning the rights of minority shareholders in takeover situations to increase protection for minority shareholders, and improve the way in which the provisions operated.

Public offers. The bill would bring together scattered provisions on public offers under one changes. They included the Stock Exchange, which was an interim basis, the three European Community directives on listing, the Council for the Stock Exchange would continue to be responsible, as the competent authority for listing, for admitting securities to and making rules on listing.

Investigation powers. The Secretary of State would be able to investigate any person who was or appeared to be carrying on investment business (whether or not authorised). The agency would be able to investigate any authorised

business which might be carried on, requiring assets to be kept in the UK and appointing a trustee to control the assets of an authorised business. Recognised self-regulatory organisations would need to have similar intervention powers, wherever possible in relation to their own members.

Insider dealing

The bill would give the Secretary of State power to appoint inspectors to investigate possible "insider dealing". So-called insider dealing is carried out by practitioners in securities markets or company executives who use price-sensitive information about companies to buy and sell shares on their own behalf.

The inspectors would be able to question people on each side of the market, and documents to be produced. The bill would also extend the offence of insider dealing by Crown servants to other public servants.

Other details

Investigation powers. The Secretary of State would be able to investigate any person who was or appeared to be carrying on investment business (whether or not authorised). The agency would be able to investigate any authorised

business which might be carried on, requiring assets to be kept in the UK and appointing a trustee to control the assets of an authorised business. Recognised self-regulatory organisations would need to have similar intervention powers, wherever possible in relation to their own members.

The inspectors would be able to question people on each side of the market, and documents to be produced. The bill would also extend the offence of insider dealing by Crown servants to other public servants.

Leon Brittan, Trade and Industry Secretary, and Michael Howard, Consumer and Corporate Affairs Minister, present the bill

profession. Insurance companies and friendly societies, insurance companies and insurance intermediaries who sold or gave advice on endowment and unit-linked policies would have to be authorised under the bill.

For insurance companies, however, there would be a special route for authorisation. The bill on the marketing of investments — for example, rules on advertising, cold calling and cooling-off periods.

Friendly societies which also carry on insurance business, supervised by the Chief Registrar of Friendly Societies, would be subject to a similar regime.

Independent life insurance intermediaries — brokers and insurance consultants — are treated in the bill in the same way as other investment intermediaries requiring to be authorised and subject to rules made by a designated agency or self-regulatory organisation.

Businesses from other member states of the European Community. If a business is authorised in another European Community member state which has an authorisation regime providing equivalent rules of investor protection to that in the UK and does not have a permanent place of business in the UK, then it would be authorised to carry on investment business in the UK on a service basis.

Becoming authorised

All investment businesses authorised by the agency would be subject to conduct of business rules. Recognised self-regulatory organisations and

professional bodies would be required to have rules which provided investors with protection equivalent to that provided by the agency's rules.

If a directly authorised business breached the rules, the powers open to the agency would be the use of its powers of intervention: a public reprimand; withdrawal or suspension of authorisation; application to a court for an injunction to prevent the breach or a restitution order requiring the business to repay any profits made through breaching the rules and to make good any losses investors had suffered as a result.

In addition, investors who had suffered loss as a result of a breach of rules by a directly authorised business or by a member of a recognised self-regulatory organisation or professional body would be able to bring an action for damages.

The agency would have powers to intervene in relation to a directly authorised person to protect investors. These powers include imposing restrictions on the kind of business which might be carried on, requiring assets to be kept in the UK and appointing a trustee to control the assets of an authorised business. Recognised self-regulatory organisations would need to have similar intervention powers, wherever possible in relation to their own members.

## DOCUMENT ON CUSTOMER PROTECTION

## Single main board envisaged to regulate services of 15,000 City concerns

BY JOHN MOORE, CITY CORRESPONDENT

A DOCUMENT published at the same time as the Financial Services Bill envisages one main board, with wide-ranging powers transferred to it by the Secretary of State for Trade and Industry, regulating about 15,000 investment businesses.

The role of the board is outlined in a document by the Securities and Investments Board and the Marketing of Investments Board, which is part of a comprehensive system for regulating investment businesses within the framework of the Government's Financial Services Bill.

The board would cover commodity futures, securities, collective investments, and life insurance marketing, and the regulated firms would range from small insurance brokers to the largest City conglomerates, including a number of big foreign houses operating in London.

Rules and practices of the board would cover some of the most professional and international markets in the world as well as the media through which millions of individuals in Britain invest their savings.

These rules and practices, says the document, "will need to deal with present abuses and fallings in the system" and provide a suitable framework for the financial conglomerates now emerging, partly in anticipation of the Stock Exchange's sweeping changes next year.

In the 38-page document, the background to the evolution of one main regulatory board for London's financial community is explained. A White Paper published in January suggested that the regulatory powers now being sought from parliament might be transferred to the SIB, covering dealing in investments, investment management and investment advice, and the covering the marketing of packaged investment products such as long-term insurance funds.

The SIB and an organising committee for the MIR have since concluded that there would have been substantial advantages in sharing the workload between the two bodies. However, both bodies have decided that the consistency and effectiveness of the new regulatory system would be considerably enhanced if responsibility for its operation

were to be placed in the hands of a single authority.

The two bodies have made proposals to the Government under which a single board, yet to be named, would apply to the Secretary of State for designation under the Financial Services Bill. The proposal has been welcomed by the Government. The SIB and the MIR organising committee expect to continue in the present form during at least the early part of 1986.

## Scope of new board's powers

The new board would seek the transfer of all the regulatory powers in the Financial Services Bill that are capable of being exercised by a designated agency.

These include powers to authorise businesses, to recognise self-regulatory organisations, investment exchanges and clearing houses and professional bodies. These powers would enable the new board to create rules on business conduct, make regulations regarding the marketing of investment products, and the safeguarding of client money, establish compensation schemes and discipline firms and individuals.

In addition, the powers would enable the board to intervene in the interests of investors, and allow it to require the production of information and to undertake investigations. It was envisaged that there would be powers to authorise and recognise collective investment schemes, such as unit trusts.

There were a number of areas which would not be regulated by the board. No powers would be transferred to the board in the new legislation for the regulation of:

Public issues of securities, including Stock Exchange listing. Takeovers and mergers, including the present role of the takeover panel.

Enforcement of the insider dealing provisions. Refusal or withdrawal of a foreign firm's authorisation on grounds of reciprocity. The Financial Services Bill does not cover the Lloyd's insurance market, or the regulation of banks, building societies and insurance companies, though all of these, except Lloyd's, would be covered insofar as they did investment business as defined

in the new legislation. "The focus is on the protection of investors and the proper regulation of intermediaries," says the document.

## Proposed structure

In the new legislation there are seven ways in which a firm may be authorised to do investment business. Five of these relate to the special cases of insurance companies, friendly societies, persons authorised in another European Community member state, operators of collective investment schemes and professional bodies such as lawyers and accountants.

The two methods which have attracted the most attention are direct authorisation by the new board and membership of a recognised self-regulatory organisation.

Under the Financial Services Bill the board would be able to recognise self-regulatory organisations whose members would not need to apply for direct authorisation in respect of the activities the self-regulatory organisation was considered competent to regulate.

No self-regulatory organisation would be recognised unless it could satisfy the board that it met the criteria and would provide effective self-regulation. The self-regulatory organisation should be closely monitored to ensure that it continued to do so. If it did not, the board would apply to the various sanctions available to it including, if necessary, withdrawal of recognition.

Membership of a self-regulatory organisation does not confer exemption from the regulatory system," says the document. "It involves acceptance of a regulatory framework at least as demanding as that provided for directly authorised persons. If no self-regulatory organisation were to reach the highest standards the board would be in the position of sole statutory regulator."

The board intended to keep the number of recognised self-regulatory organisations as small as possible. "Undue proliferation of self-regulatory organisations would give rise to obvious problems of control and monitoring, as well as to overlap and duplication," says the document. The board, however, wished the maximum possible number of businesses to obtain

their authorisation through a self-regulatory organisation rather than direct.

There are seven proposed self-regulatory organisations which are intended to gain recognition. They are:

The Stock Exchange. This would regulate firms dealing and broking in securities and derivatives, and investment management and advice incidental to this business.

The International Securities Regulatory Organisation. This would regulate firms dealing and broking in securities, international money market instruments, forward agreements, and related futures and options.

The Association of Futures Brokers and Dealers. This would regulate firms dealing and broking in futures and options, and investment management and advice incidental to this business.

The National Association of Securities Dealers and Investment Managers. This would regulate firms dealing and broking in securities and derivatives, and investment management and advice incidental to this business.

The Investment Management Regulatory Organisation. This body would regulate investment managers and advisers, including managers and trustees of collective investment schemes and in-house pension fund managers.

The Life Assurance and Unit Trust Regulatory Organisation. This body would regulate life companies and unit trusts, and investment management and advice incidental to this business.

The Life and Unit Trust Intermediaries Regulatory Organisation. Insurance and unit trusts intermediaries, so far as their business is limited to life assurance and unit trust products, would be regulated by this body.

This was not an exclusive list of all the organisations with which the board had discussed recognition, says the document, and one organisation not on the list recently made formal application.

With a view to reducing potential overlap, the SIB and

the MIR organising committee are encouraging a process of convergence of certain of the potential self-regulatory organisations, such as between the Life and Unit Trust Intermediaries Regulatory Organisation and the National Association of Securities Dealers and Investment Managers; and the Life Assurance and Unit Trust Regulatory Organisation and the Investment Management Regulatory Organisation.

## Multiple authorisation

Membership of a self-regulatory organisation would not necessarily permit a firm to do all types of investment business. A number of firms would need to join more than one self-regulatory organisation in order to carry out a full range of investment business.

It was even possible that some may be authorised by self-regulatory organisations membership for some functions and by direct authorisation for others. It was also likely that within many financial groups there would be subsidiaries authorised by a range of self-regulatory organisations.

The board is concerned to minimise the complexity and inconvenience that may arise from such multiple authorisation," says the document.

Problems of this sort are most likely to arise in the context of financial surveillance—that is, setting and monitoring compliance with liquid capital and similar rules.

The board proposes to introduce a "lead regulator" policy to ensure that responsibilities in this "and in this area alone" are clearly allocated to a single authority.

The lead regulator would generally be the self-regulatory organisation responsible for the largest part of a firm's business. Other self-regulatory organisations would be able to provide financial monitoring of the firm to be done by the self-regulatory organisation which was the lead regulator.

For each multiple authorised firm there will need to be a clear understanding as to which self-regulatory organisation this will be, and the board will wish to be informed of all such arrangements," says the document.

Where the firm was authorised by the board for any

significant amount of business the board would normally itself exercise the role of lead regulator.

Close co-operation between the self-regulatory organisations will be an essential part of the system, and a self-regulatory organisation's willingness to share information with others will be a requirement of recognition.

In many cases, investment businesses would be supervised under other regulatory systems—for example by the Bank of England, but may also require authorisation by the new regulator. The board was considering, jointly with other financial regulators, the extent to which the lead regulator concept may have application outside the system of investment business authorisation.

The board was concerned to minimise duplication in reporting requirements on banks which were authorised as deposit-takers by the Bank of England, but may also require authorisation by the new regulator. The board was considering, jointly with other financial regulators, the extent to which the lead regulator concept may have application outside the system of investment business authorisation.

Investment exchange

Investment exchanges might apply for recognition by the new board in the proposed framework. An investment exchange is a body that provides an organised market framework within which transactions in investments can be effected.

The effect of recognition is to exempt the exchange from the need for authorisation as an investment business and to provide a special regime for competition scrutiny.

The board would attempt, in its conduct of business rules, to provide comparable protections for transactions done away from a suitable recognised exchange. But transactions done under the rules of a properly regulated exchange would not attract these alternative requirements.

This might be convenient for firms, says the document, in that disclosure made on a co-operative basis through systems established for that purpose could be expected to be less onerous than the case-by-case disclosure likely to be required by the conduct of business rules.

Regulation of investment business: the new framework. The Securities and Investments Board, Marketing of Investments Board Organising Committee, 3 Royal Exchange Buildings, London, EC3V 3NL.

Comments should be addressed to Mr Paul Smart, DTL, Financial Services Division, Room 336 Sanctuary Buildings, 16-20 Great Street, London SW1P 3DB, by January 31 1986.

## AUDITORS

## Statutory duty to report to regulators

By Barry Riley

A CONSULTATIVE document published yesterday on the auditor's role in the financial services sector is designed to pave the way for government amendments to the Financial Services Bill during its passage through parliament.

It envisages the imposition of statutory duties on auditors to report to regulatory authorities, overriding the fiduciary duty to the client in certain circumstances. Authorised institutions which are required to draw up contracts with their auditors waiving confidentiality restrictions as regards communications with regulators.

The document has been published by the Department of Trade and Industry within a few days of the Treasury's White Paper on banking supervision which sets out the principles for the basis of the relationship between auditors and supervisors in the specific area of banking. The consultative paper seeks to apply similar principles more widely through the financial services sector.

It covers the auditor's role in relation to fraud, and the responsibility of the auditor to communicate with regulatory authorities. At present auditors are inhibited by confidentiality requirements, and it is generally believed that relationships must be redefined in order that the auditor might sometimes be in a position to spot irregularities before they became evident to management.

The consultative document states that the primary responsibility for preventing fraud lay with those responsible for its management, but the auditor has an important supporting role to play. In particular, the auditor's statutory right of access to the company's books acted as a deterrent and meant that the auditor might sometimes be in a position to spot instances of fraud and other irregularities before they became evident to management.

The auditors of a company had a duty to report a suspected fraud to management if, in their opinion, it was sufficiently material that it could affect whether the accounts present a true and fair view. Problems could arise, however, over the reporting of management or company fraud.

"There is clearly little point in auditors bringing their suspicions to the attention of those responsible for perpetrating fraud," the document says. "Auditors may consider that they owe a duty of confidentiality to their client which prevents them from raising the matter with any outside party."

The department "very much welcomes" the new fraud guideline issued by the Auditing Practices Committee, stating the current position. It welcomed the "general direction" of the report of the working party on fraud chaired by Mr Ian Hay Davison, which was published by the Institute of Chartered Accountants in England and Wales in the autumn, and the just-published study by Lord Bessborough for the same institute on the auditor and fraud.

Confidentiality, in the Government's view, did not prevent disclosure of fraud. "Normally, but not in every instance, the auditor should also inform the management."

The document states: "The Government looks to the profession to draw up guidelines encouraging auditors to take a positive view of their reporting duties." It auditors would wish to consider in each case the potential risks to investors of any failure to draw relevant matter to the attention of supervisors.

A section of the document outlines the basis of the proposed relationship between auditors and supervisors. Self-regulatory organisations would need to have close relationships with the auditors of member firms in order to be able to demonstrate that they met the criteria for recognition. A similar regime would apply to members of professional bodies authorised to carry on investment business incidental to the practice of their profession.

The basic need in the department's view was to facilitate communication between auditors and supervisors. The system would involve new obligations on auditors. They would be required, in performing their functions, to keep supervisors informed of matters of which the supervisors need to be aware in order properly to perform their functions.

"This obligation would include not only a requirement to notify the supervisors of specific events, eg a decision to resign or not seek re-election or to qualify the accounts, but also a more general duty to co-operate with the supervisors."

Comments should be addressed to Mr Paul Smart, DTL, Financial Services Division, Room 336 Sanctuary Buildings, 16-20 Great Street, London SW1P 3DB, by January 31 1986.

Scientists have returned to a long-proven technique in the search for new materials. Peter Marsh reports

## Science starts to gel in world of ceramics

FROM MICROCHIPS to contact lenses, abrasive belts to Star Wars, applications for a new class of ceramics made using liquid-chemistry techniques are exciting engineers around the world.

Development of the ceramics is based around sol-gel chemistry. This entails dispersing groups of solids in a solution followed by the removal of liquid to form a gel.

An everyday example of sol-gel chemistry is mixing flour and water to form a paste. After several days, the water evaporates, leaving a thick gel which eventually solidifies.

By controlling dispersions of a range of solids using chemical techniques and by choosing different kinds of solvents, the sol-gel scientist can produce a bewildering range of compounds which exhibit chosen properties almost to order.

With this process, researchers can optimise the grade of uranium needed for nuclear plants and specify different concentrations of "dopants" (materials which change the electronic characteristics of semiconductors) in micro chips.

They can add organic materials such as silanes into glassy substance used in contact lenses to make the devices more permeable to oxygen.

In other work, engineers are fashioning tiny, super-smooth ceramic balls to toughen rotor blades in jet engines. Researchers in President Reagan's Strategic Defence Initiative are attempting with sol-gel methods to devise new materials that either make missiles (and aircraft) invisible to radar or which harden the outer casings

of space platforms to lasers and other novel weapons.

The sol-gel route promises to become one of the most important ways to make advanced ceramics (called fine ceramics in Japan) which are based on non-organic, non-metallic compounds such as the oxides of aluminium, silicon and boron.

Advanced ceramics, world sales of which are put at about \$6bn (a figure due to double within the next five years), are normally made from a complex mixture of starting materials, whose purity, particle shape, and distribution must be carefully controlled.

The sol-gel route may replace, in many cases, the conventional technique to make such materials—fusing powdered mixtures such as groups of oxides at high temperatures of above 1,000 deg C.

Besides requiring large amounts of energy, this sintering route may be unable to produce a desired substance on the grounds that, no matter how high a temperature, two materials simply will not combine in the powder form.

Mr James Woodhead, a scientific officer at Britain's Harwell Laboratory near Oxford, which is a leading centre in sol-gel processing, said: "We are putting science into ceramics."

Dr Sridhar Komarneni, a scientist at the materials research laboratory at Penn State University in Pennsylvania, says research into sol-gel techniques has taken off in recent years. This is as companies realise the method provides a route to materials difficult or impossible to make with conventional techniques.

In the US, concerns such as 3M, Battelle Institute, Owens Illinois and Bell Laboratories are exploring the potential for sol-gel processing. Other companies involved in sol-gel research include Kyocera and TDK in Japan, ICI, Plessey and Morgan Crucible in Britain and Schott Glass in Germany.

3M is selling two kinds of ceramic substances—for abrasive belts and heat-resistant tiles—which it says can be made in no other way other than by sol-gel chemistry. In sol-gel chemistry, materials are mixed at low temperatures. The materials could be different types of metal oxides, chlorides, nitrates and alcohols.

These are added to a suitable liquid, either water or an organic solvent such as ethanol or butanol. The materials do not dissolve but form a colloidal dispersion, which contains relatively large particles suspended in a fluid.

The sol is turned into a gel by a further chemical reaction in which water is removed from the dispersion. This can be done by adding a suitable organic solvent, such as ethyl

hexanol. The processes of forming both sol and gel can be controlled by changing such factors as acidity and temperature or by adding different materials to change the surface tensions of dispersed solids and solvents.

With the technique, scientists can introduce into a framework of ceramic materials small quantities of exotic substances such as rare-earth metals (lanthanum, for instance) which change the properties of the finished substance in a desired way.

By removing water from a liquid mix to form a gel in the form of tiny spheres, scientists can produce a range of ceramic materials tailored to individual needs.

## Key role in Star Wars programme

SOL-GEL methods will play a key part in the research under President Reagan's \$26bn Strategic Defence Initiative. This has the dual aim of exploring techniques both to shoot down Soviet missiles in flight and to protect against Soviet action the space-based components needed for this first job.

The materials research under the SDI will focus on three broad applications—improving electronic systems to generate microwaves for communications signals; coating the outside of space objects to fool enemy sensors such as radar; and "hardening" space platforms against weapons.

Military engineers already use a range of ceramic-based materials in microwave oscillators that generate signals. These materials, barium nonatitanate for instance, are good at reflecting microwaves and so make efficient transmitters. In recent years, companies such as Trans Tech in the US and Plessey, Marconi and Filtronic in the UK, have investigated sol-gel techniques to improve the performance of microwave generators.

A whole range of exotic substances, based on oxides of metals like zirconium, tin, tantalum and lanthanum, have come to the fore. In many cases, the companies which produce the materials keep secret the exact chemical composition, which is virtually impossible to find

out by conventional analytical methods. Under the Star Wars programme, scientists in big US aerospace companies such as Lockheed and McDonnell Douglas are exploring new combinations of ceramic materials that, rather than reflect microwaves, absorb them strongly. This is so that objects coated with the substances do not show up on radar screens.

Research in this area has been under way for several years, under great secrecy, as part of the Pentagon's stealth programme aimed at making new generations of bombers invisible to radar. Other sol-gel techniques are aimed at finding materials to protect physically the exteriors of space platforms

3M, the Minneapolis-based materials company, sells two types of ceramic product based on sol-gel chemistry. Nextel is a ceramic fibre, based on alumina with added barium and sulphur, which can be woven into heat-resistant fabric.

The most famous application for Nextel, which can withstand more than 1,000° C, is in the heat-resistant tiles on the US space shuttles to stop the vehicles burning up as they encounter the Earth's atmosphere.

The second product is Cubitron, sold in the form of small particles stuck to belts used in grinding machines. The particles are highly wear resistant and can form part of long-lasting grinding hardware.

3M says the materials in Cubitron (which is based on alumina) can be varied to suit specific applications.

## Tiles keep shuttles cool

Other applications of sol-gel processing are:

- Nuclear fuels. Government-run research laboratories, such as Harwell in Britain and Oak Ridge in the US, have experimented with sol-gel techniques for decades to find new ways to make uranium oxide fuels.

- Contact lenses. PA Technology, a contract-research group in Britain, is working on new ways to introduce materials into the glass-type substances (based on silicon and oxygen) for contact lenses. The materials can affect the rate at which oxygen permeates through the lenses to keep the eyes healthy.
- Glass. Schott Glass of Germany has produced coatings for glasses—for instance to increase the material's insulating properties.
- Materials hardening. To protect steel and other metals, engineers spray on a thin layer of tiny ceramic particles (plasma spraying). Sol-gel methods provide a route to making particles small enough (less than 40 microns in diameter) and with the correct hardening properties. A material commonly used in such applications used for instance by Rolls-Royce to protect engine parts, is partially stabilised zirconia—zirconium oxide particles embedded in other oxides of metals such as aluminium, magnesium and yttrium.
- Catalysts. Companies such as Johnson Matthey are experimenting with catalysts made from palladium or platinum the properties of which are enhanced by adding ceramic fragments and rare-earth metals such as lanthanum.
- Electronics. Many of the world's biggest electronics companies are investigating sol-gel chemistry as a way to improve the ceramic materials used as a base in many specialised forms of microchips.

MANUFACTURERS OF THE WORLD'S MOST POWERFUL HAND-HELD COMPUTERS

## Esprit link may rival automation initiative

IN WHAT could be seen as a move to counter the growing influence of the General Motors/Boeing Map/Top Initiative in factory and industrial office communications, 20 companies, mainly European, have come together as part of the EEC Esprit programme to develop a "common vision" of technology infrastructure for use by businesses of all sizes in all sectors.

The list includes GEC, AEG, Telefunken, Aerospaciale, British Aerospace, Bull, ICI, MBB, Philips and Siemens, but contains no major car company. The 20 companies have obtained Esprit approval for their joint effort to develop an open systems architecture for computer integrated manufacturing. The objective is to develop hardware and software approaches that will allow computer-based systems to communicate, regardless of manufacturer.

Mr Derek Roberts of GEC, which issued the statement, said the group expected the move to be a significant contribution to improved competitive strengths of European industry.

"Small and medium sized companies as well as large companies will gain from greater flexibility and faster response to new business opportunities."

GEOFFREY CHARLISH

## Jumbo printer may usurp artist

ARTISTS WHO specialise in painting the giant advertising posters which adorn the sides of high-rise buildings might find cause for concern in the latest poster-printing technology developed by Matsushita, called the Full Colour Jumbo Facsimile.

The company's colour enlarging printer system can reproduce a full-colour image 16 metres by 7 metres in just one and a half hours, from an original as small as a letter page.

This compares with as much as two weeks work for an artist using conventional painting methods.

The system also allows for fast last-minute modifications to original designs and offers a high level of colour consistency throughout the reproduction.

Matsushita certainly believes its system will usher in changes, foreseeing a new role for the artist.

Mr Yoshio Tsukamoto, general manager of Matsushita Graphic Communication Systems which developed the system, said: "In the future the artist or designer will be based at the computer company, the artist's original design will be held and modified by computerised image-processing."

With the new system, graphic designs are developed on a computer-applied image-processing system similar to those already used by many publishing ventures which handle magazine-

Matsushita's jumbo facsimile machine.

sized text and image reproduction. Using a colour display screen the operator can synthesise different pictures, superimpose patterns and characters, enlarge and reduce and add different colours over an original image.

The final image, complete, is stored on a 67 Mbyte cartridge tape, and from this point onwards the Jumbo printer takes over.

The Jumbo facsimile weighs 14 tonnes and consists of two giant roller drums 2.5 metres in diameter and 9 metres in length and a spray gun assembly which travels alongside the whole controlled by a 16-bit micro-computer.

Operating on instructions from the cartridge tape, paint can be sprayed by the two sets of four spray guns at any of

four painting pitches: 2mm, 4mm, 8mm or 16mm. The colours used are cyan, magenta, yellow and black and 256 steps of colour gradation can be achieved.

The finest full-size reproduction using the 2mm pitch, take 11 hours, while with the "rougher" 16mm setting the job can be completed in 90 minutes.

The system uses a Hewlett-Packard micro-computer and Matsushita-developed CAD/CAM software.

Mr Tsukamoto says that the editing and printing sections of the system could be located in different cities if necessary.

The full system costs ¥450,000,000 (about £15m) and the first unit is to be installed in Los Angeles next month.

## THE PAINT INDUSTRY

## A rapidly changing canvas

By Ian Hamilton Fazey

THE PAINT business is never going to be the same again. The £14m takeover of Blundell-Permglass by the Dutch chemical giant Akzo—after beating off the Reed Group's Crown Paints—is just the latest stage in the biggest and longest shake-up the British paint industry has ever known.

One result is that five of Britain's top 10 paintmakers are now in foreign ownership. Four pressures have been building up since 1980—recession, rising costs, fragmentation of markets and new technology.

To withstand them, a modern paint company has to be big, or backed by a bigger concern, or be so outstanding in its technology and marketing that it can dominate a segment and dictate pricing policy.

Blundell-Permglass was none of these things. It had a good name and good products but its main market—decorative products for the painting trade—became more fragile as recession reduced demand.

The squeeze tightened as raw material prices rose and big competitors kept prices down in a struggle for market share. When Blundell-Permglass plunged into the red after reporting considerably reduced profits in 1984, takeover became the likeliest outcome.

Mr Robert White, the chairman, says he has no regrets about selling to a foreign bidder because he believes a new British owner would have cut production in order to reduce pressures on itself. "We see in this a greater security for the largest number of employees, particularly the 300 we have in our Hull factory," he says.

Without that reinforcement, however, competition in the UK can only get more intense as Akzo's Sikkens brands build on a former British base. Paint is marketed in four broad sectors—decorative, industrial, protective coatings and specialities. The decorative sector is the most familiar be-

cause it surrounds us in everyday life. It is the main volume market, dominated in the UK by ICI, Crown and the Hoechst subsidiary, Berger.

Industrial paints are used in manufacture—the automotive industry is a key segment. It is increasingly a high technology business, with intensifying demand for better performance.

Protective coatings are heavy duty paints for outdoor structures or pipelines which have to cope with salty or other corrosive conditions, while marine paints form a large, special market of their own. Other specialities include traffic markings and overware.

Paint, however, presents one abiding problem: it is not a stand-alone product. If industry is making fewer goods, if people are changing cars less often, if consumer spending power is depressed, if local authorities are squeezed by public spending controls, if the manufacturing sector is reduced in size, then less paint will be used.

In the 18 months from January 1980 sales of industrial paints fell by a quarter. Although the trend bottomed out quickly, the market has been running at less than 80 per cent of 1979 levels ever since.

Many companies could live with this while the prices of raw materials—which account for up to 60 per cent of production costs—were stable. But between 1983 and the start of this year there has been an overall 14 per cent increase in costs. The most crippling rise has hit decorative paintmakers like Blundell-Permglass, which use white pigment—titanium dioxide—up 36 per cent in price in 18 months.

While recession and rising costs have had a universal effect the pressures caused by market fragmentation and new technology have wreaked more selective havoc. In most sectors these two pressures have an inter-related effect.

## BRITAIN'S TOP 10

Company	Parent	UK sales (£m) (estimates)
1. ICI	ICI	120
2. Crown	Reed Ind.	104
3. Berger	Hoechst	100
4. Macpherson	Tikkurila	90
5. International	International	70
6. Kalon	Kalon	43
7. Blundell-Permglass	Sikkens	29
8. Glasurit-Beck	BASF	28
9. Becker	Becker	24
10. Manders	Manders	16

Sources: Published and private data, Louis McCulloch Consultancy

Evidence of new technology is on the shelves in the high street—examples include one-coat paints, non-drip paints, porous paints that penetrate wooden surfaces, and woodstains that will stand up to any weather.

Technology has even created some market segments. A newly developed ability to paint plastic so that it looks like leather is transforming the design of car interiors. Perfumed additives can make the injection moulded parts—which can now be as complicated in shape as the designer wants—smell like the real thing.

Painting plastic used to be a dangerous business because the paint caused brittleness. Chemical companies and their paint subsidiaries—and notably ICI—have now developed plastics and paint that are strong and pliable when they bond together. The Rover 200 series has plastic bumpers as a result. Plastic wings are being developed for Austin-Morris.

Coil coating is another high technology market. Steel or aluminium coils are unrolled, painted on automated lines, cured by heat or electron beams, and rolled up again for sale to manufacturers.

The paints are so tough that when the coils have been cut

into sheets they can be stamped or formed into vehicle panels, white goods, caravans, or profiled building sections with no need for further finishing. Paint shops have been eliminated in factories, with considerable savings. In building, on-site spraying, with its variable quality, is no longer necessary.

Some finishes are guaranteed for 30 years to first maintenance. Not surprisingly, the coil coating market segment expanded at 14 per cent a year throughout the recession.

But the cost of developing high technology paints for very specific market niches can be crippling.

Mr Louis McCulloch, a consultant who has worked for BASF and Sikkens, says that margins are seldom better than 5 per cent in even the best market segments, with no-one making profits at all in many of them.

Market share is the critical factor in deciding whether to stay in a particular segment. If a company cannot at least be in the top three with, say, 15-20 per cent of the market, it is too much at the mercy of the segment leader's pricing policy to have any real hope of long-term profits.

Takeovers have seen Tikkurila, subsidiary of Finland's

state-owned chemicals company, buy Donald Macpherson—Woolworth's paint supplier but a leader in industrial powder paint technology (where no solvents are used at all). Its disappointed rival, Sweden's Becker group, consoled itself by buying Goodlass Wall, licensee of the US-owned Valspar trade paint label, but with impressive strengths in powder and heavy-duty paint technology.

Meanwhile, BASF, owner of Glasurit-Beck, has entered the British Top 10 following the purchase of the UK business of France's Valentine and the acquisition of Inmont worldwide from United Technologies.

There have been planned divestments, too: International Paint has decided its worldwide future is best served by dominating marine and powder markets, so it sold its British automotive paint interests to PPG, the US glass and chemicals giant, which is the world's largest paintmaker.

Meanwhile, ICI has got out of heavy-duty paints for agricultural, construction and earth-moving equipment, where it could not make money against Tikkurila-Macpherson, which snapped up the ICI business.

Other paintmakers may change hands. Sun Chemicals, owner of automotive paint specialist Aut and Wibur, has already tried unsuccessfully to sell it to the US paintmaker Sherwin-Williams.

Possible takeover targets also include Croda Paints, which is strong in certain powder coating niches. Postens, an expert in the powder coating of architectural aluminium, Trimite, the trade specialists, and Johnston which recently went public. Two up-and-coming companies in the paint industry are J W Bollow, and Hill, Son and Wallace, both considered candidates for the Unlisted Securities Market. The shake-up continues.

## Asia's Largest Money Show Is Coming!

# MONEY'86

H O N G K O N G

October 8-11, 1986  
Level 3, Ocean Terminal,  
Kowloon, Hong Kong

Hong Kong is the regional financial and investment centre of Asia. Investors throughout the Far East bring their money to Hong Kong which has the largest concentration of highly paid expatriate workers anywhere in the world. This Exhibition, \$ MONEY 86 \$ HONG KONG, aimed at the regional private investor and small businessman, represents an unprecedented opportunity to penetrate this vibrant investment market.

Hong Kong residents can claim to have the highest disposable income of any country in Asia, almost everyone in Hong Kong is a substantial saver; in addition, they possess a legendary interest in finance and investment.

\$ MONEY 86 \$ HONG KONG offers the ideal forum for directly accessing the Hong Kong and Asian investor and small businessman and for playing a part in their investment decisions.

Exhibitors from Asia, Australia, the United Kingdom, Europe and North America are being invited to attend this major money and investment show.

\$ MONEY 86 \$ HONG KONG presents one of the most significant current financial events in Asia.

If your company wishes to access this market or wishes to exhibit its presence, then join the financial community in Hong Kong at \$ MONEY 86 \$ HONG KONG.

Enquiries and advance reservations are now being accepted and early bookings are strongly recommended.

Purest of the pure.

Glenfiddich Pure Malt Whisky is unique among malts. No other Highland Malt is distilled, matured and bottled at its own distillery. No other Highland Malt uses a single source of pure natural spring

water throughout from distilling to bottling. Since 1887 the waters of the Robble Dubh have ensured the consistent purity of taste for which Glenfiddich is justly famous. A tradition of purity that continues to this day.

Glenfiddich. The pure malt.

## Landlords to fight planning changes

The PAG, which recommends that these businesses should in future be categorised in the same class as shops, says it finds it hard to understand why

Sydney Mason, chairman of Hammamoor, is leading the big guns into the battle. "We think the proposal is ridiculous. Good estate management demands that the landlord exercises proper and reasonable judgment in the interests of the public and retailers as a whole. "It is not in anyone's interest to see the High Street occupied solely by building societies, banks and bookshops. Many say the situation is bad enough already. We are determined to ensure that it does not get any worse."

**BY MICHAEL CASSELL**

"We accept that the investment is a small one, but at least we are trying to do something to help regenerate areas in desperate need of new investment. It is certainly not a bad deal; the yield is all right and the covenant is good, although we accept that we might have

of property through other funds operated in the UK and Eire.

Its other outstanding, single property asset is Winchester House, the 20-year-old, 250,000 sq ft office building in the City.

short-term. Risks there may also be along the Brixton Road, but then they are much smaller and decidedly nearer.

**Kensington offices  
for Penguin Books**

● Tarmac Properties has let on Strand Central, the 50,000 sq ft office building developed on the forecourt of London's

● Laing Properties has acquired a 114,000 sq ft retail development called Saanich Plaza in Saanich, Victoria, British Columbia. The Plaza is now under construction and when it is completed next year it will have an estimated value of around \$5m. The 9-acre scheme is 80 per cent prelet and is half a mile north of Laing's existing Mayfair shopping centre.

## THE MANAGEMENT PAGE

EDITED BY CHRISTOPHER LORENZ

## Financial conglomerates

## Hard to pull off gracefully

John Plender provides examples of hybrid groupings which have been made to work

WHAT makes a successful financial conglomerate? Or, to put it more crudely, is it really possible to get all four feet in the trough at once?

Certainly the experience of American Express, Sears Roebuck, Pru-Bach and others in the US suggests that the trick is hard to pull off gracefully. In Britain, banks that have bought into Stock Exchange firms over the past two years are becoming increasingly conscious of the risks.

Yet with traditional boundaries crumbling in capital markets across the world, there is no escape from creeping conglomeration. No bad time, then, to put the unfashionable argument that the move towards hybrid finance, though fraught with difficulty, can sometimes work. Note, though, that the specific examples of successful conglomeration that follow exemplify a rather different approach from the one pursued by the more ambitious players in Britain's City revolution.

Exhibit number one is familiar enough: Merrill Lynch. The big US broking and financial services group may not be the darling of Wall Street at the moment. But it can claim to have turned itself into a one-stop financial shop by carrying off one of the most successful raids ever mounted by an outsider on traditional banking territory.

The vehicle for this push from securities into banking was Merrill's cash management account. This combined an orthodox broking account for the purchase and sale of stocks and shares with a money fund account through which customers could put cash into a pooled fund that offered money market-related interest rates. The package came with a cheque book, a Visa card and borrowing facilities. By previous broking standards, highly efficient use was made of the customer's money.

Any idle funds that came into the customer's cash management account, say from dividend receipts on the customer's securities portfolio, were automatically invested in the money market fund. A computerised system ensured that if, for example, a customer decided to buy some IBM stock, the purchase would be financed from the least expensive source in the

customer's cash management account, starting with idle cash balances and ending with the use of the borrowing facility.

When the product was launched in the late 1970s, Merrill Lynch was taking a gamble that the loss of the interest it used to earn on its customers' money would be more than made good by establishing a wider and closer relationship with the customers. It won: in the early 1980s the device attracted a prodigious \$700m into Merrill Lynch, along with more than 1m customers, half of them new to the firm.

Today the number has risen to 1.3m and those customers run an average cash balance in the account of \$80,000. Merrill is a bank in all but name and in terms of deposits the firm would rank high in the league table of America's top ten banks.

## Anomaly

Why, it might be asked, did this asset management account work better than comparable products in Europe, such as the package of financial services recently marketed in Britain by Allied Dunbar?

The first reason must be that Merrill Lynch was cleverly exploiting an anomaly in the US regulatory structure: the banks were not, until recently, free to offer their customers market-related returns on their deposits. They were constrained by regulatory ceilings on interest rates.

Merrill Lynch executives say emphatically that the broker-dealer account, through which customers buy and sell securities, is the heart and soul of the package. But it was the prospect of a decent return on their money, when bank deposit interest rates were pegged at below the going rate of inflation, that pulled in the customers—a point that may carry a warning for British stockbrokers, who are tempted to launch high interest cheque accounts to help drum up securities business.

Equally important, the firm bothered to find out what the customers actually wanted. The exercise was prompted by detailed market research carried out in 1975 by Stanford Research Institute at the behest of Merrill's then boss, Donald Regan, now at the

White House. The cash management account was closely modelled on the research findings.

Account executives were also given a financial incentive to sell the product. In the event it turned out to generate around three times as much commission as a normal broking account. But the incentive point was important. In Britain Mark Weinberg, in the forefront of the move towards conglomeration, admits that one of the mistakes made by his Allied Dunbar group in launching a Merrill Lynch-style offering was to assume that the package would sell itself.

A second, less familiar case of conglomeration, concerns, rather surprisingly, the British Trustee Savings Bank group. Though busily advertising itself as a bank, the TSB is actually a financial services hybrid. Its latest accounts reveal 26 per cent of profits as coming from non-banking activity. More important, it showed its paces as one of Britain's fastest growing and most efficient unlinked life assurance groups.

Last year TSB Life came third in the single premium league table, lagging only behind Legal & General and Hambro Life (now Allied Dunbar). In the smaller regular new premium business it beat the Abbey Life and the top position.

What impresses the TSB's competitors in the unlinked life business is the productivity of the 260-strong sales force, whose individual members are now selling at the rate of one and a half to two life policies per working day, way above the industry norm.

In selling non-banking products the TSB group has the immense advantage of an existing clientele of 6m people. They tend to belong to socio-economic groups that lurk low down in the alphabet—"all the ones who aren't worth having," as one jaundiced (and less successful) competitor puts it. Yet they have clearly provided the TSB with a rich vein to tap. Why has it succeeded where the clearing banks, which also have an army of under-insured customers, have been slower on the uptake?

The answer appears to be that the TSB has found a winning

formula for cross-selling financial products of non-banking subsidiaries. Life assurance salesmen work out of the branches, as well as making calls at home on the basis of leads provided by the branch manager.

According to Derek Stevens, general manager, finance, of the TSB group, the branch managers are given ambitious targets for the volume of introductions that they provide to the salesmen. The branch also earns commission payments on the sales of insurance and other products such as the TSB's credit card.

While some managers were initially worried about insurance salesmen conducting a hard sell at their branches, the figures suggest that many are now highly motivated. According to Stevens the future potential in insurance is huge because the proportion of customers buying the TSB's insurance is still modest, despite the spectacular progress up the league tables. And because reserve requirements are onerous when a life company is growing fast, that profit potential has yet to be fully reflected in group earnings.

The final example of successful conglomeration comes from continental Europe where financial conglomeration has long been the norm. West Germany's Deutsche Bank is the universal bank par excellence, combining the functions of an issuing house, a distributor of bonds and shares, a market maker in securities and an investment manager of substantial in-house funds.

Its particular strength in the international capital markets is that it has established a powerful position outside the D-mark sector of the Eurobond market. Last year, for example, it acted in a management capacity in 185 dollar bond issues compared with 87 D-mark issues. Four years earlier the position was very different, with D-mark issues accounting for nearly half of the total.

The complete integration of its operations all along the chain from the international capital markets divisions (now in London) to investors around the world helps explain the strength of a bank that is scarcely regarded as innovative in international markets. Not

Successful financial hybrids: all created without acquisitions

only does Deutsche Bank have substantial placing power—the ability to find investors ready and willing to absorb securities issues—with central banks and other institutions; it draws enormous strength from its huge retail branch network in the Federal Republic and its membership of the domestic exchanges.

As well as the benign regulatory climate in West Germany, Deutsche Bank's advantages include the fact that West Germans are affluent and have a high propensity to save. They have also been educated by the banks to invest in foreign bonds, whose appeal is enhanced by interest coupons that appear high when compared with those available in West Germany's low-inflation economy.

Any comparison with other European commercial banks must allow for different banking traditions and differing case law on the management of fiduciary funds. Yet it is hard to believe that British bankers, for example, have done all they might to develop their own placing power by exploiting the potential of their huge branch networks.

What of conflict of interest? Deutsche Bank staff claim that their objective is to obtain the best terms for borrower and investor alike. There are few artificial barriers such as "Chinese Walls" between different functions (although in Deutsche Bank operations such

as underwriting and syndication may take place in separate divisions from, say, trading and sales). Yet, oddly enough, the potential for conflicts of interest in West Germany does not appear to give rise to constant investment scandals in a system dominated by a handful of big banks.

Here, then, is a genuine one-stop shop, in which the whole sale and retail businesses are fully integrated. Many in the Euromarkets believe that it provides the model for the financial services group of the future.

## Boundaries

What are the messages in all this for countries like Britain that are undergoing rapid liberalisation in financial markets? One interesting point that Merrill Lynch, the TSB group and Deutsche Bank share in common is that takeovers have played little part in the attempt to cross the traditional boundaries between different types of financial activity. Merrill Lynch, for example, originally acquired its cheque and Visa card processing capability through a contractual arrangement with Bank One of Columbus, Ohio. TSB Life is really an in-house creation.

Also noteworthy is that success appears to have been heavily determined by the regulatory climate. Restrictions in the US created a market opportunity for Merrill Lynch which did not exist in the same form

in much of Europe. Regulatory freedom created opportunities in insurance and securities for the TSB group and Deutsche Bank that were not available in the US.

In all three cases management was successful in overcoming problems of "culture"—organisational and behavioural barriers to selling products generated by separate subsidiaries of the same group.

Above all, management strategy in this trio of conglomerates appears to have been firmly rooted in a clear perception of customer needs, whether existing customers or the customers of competitors.

It seems doubtful whether the same is uniformly true of those who are playing the conglomerate game in Britain today. That said, the earnings records of these three groups, however successful they may have been at cross-selling, are not uniformly impressive. Merrill's is noticeably unhappy; the push into banking, though a coup in itself, has conspicuously failed to emancipate the firm from the traditional problems of the highly cyclical, labour-intensive brokerage business.

That is a measure of the problem that financial firms confront in an increasingly deregulated market. The safest prediction for the second half of the 1980s is that the management consultants will make more out of conglomeration than the conglomerates themselves.

## Management abstracts

A radical solution for car parking. K. J. Lewis in Hospital and Health Services Review (UK), July 1985 (41 pages). Describes how the authorities at St James University Hospital, Leeds, faced with severe car parking difficulties, devised and implemented a radical new parking scheme; emphasises the consultation with both outside and internal bodies to produce a scheme involving site access control, permits, and a minimal charge. Claims outstanding success.

Converting crises into cheers. D. R. Stephenson in IPRA Review (UK), August 1985 (51 pages).

Studies Dow Chemical Canada's programme for dealing with crisis. Looks in detail at specific incidents, eg, a train derailment (which posed a public health scare); encapsulates the company's whole PR attitude by stating that "no comment" is recognised as an inept and a totally unacceptable response.

Decision support for marketing research and corporate planning. L. D. Smith plus others in Information & Management (Netherlands), March 1985 (13 pages).

Tells how Shelter Insurance implemented a computer-based decision support system for research and planning, which presents large amounts of information in more understandable graphic form, and describes the tools and techniques used; tells how a modern computer language was employed to enable parts of the system to be built by staff with little programming knowledge.

Using direct mail to build awareness. H. Walker in Industrial Marketing Digest (UK), Vol 10 No 3 (6 pages).

Tells how Griffith Laboratories—flavouring suppliers—set about improving the awareness of the snack food industry; tells how they used a six-shot direct mail campaign (the fifth containing six 250-gramme samples), with the aim of persuading the prospects to visit the laboratories and factory. Claims success, but doesn't quantify it.

These abstracts are condensed from the abstracting journals published by Anhor Management Publications. Licensed copies of the original articles may be obtained at a cost of £4 each (including VAT and p+p; cash with order) from Anhor, PO Box 23, Wembley HA9 8DJ.

Extracts from the annual reviews by the chairmen of the Orange Free State gold mining companies administered by Anglo American Corporation.

## "Freegold obtains government backing."

Mr. E. P. Gush, chairman of Free State Goldfields, President Brand, and Western Holdings; and Mr. G. S. Young, chairman of President Steyn.

## Consolidation

The permission of the Minister of Mineral and Energy Affairs for the consolidation of the assets of all the OFS gold mining companies administered by Anglo American Corporation has been granted. The approval of the Minister of Finance to treat the consolidated mines as a single tax entity has also been received. Arrangements are now being made, therefore, to combine the companies into one company, to be known as Free State Consolidated Gold Mines Limited ("Freegold").

Copies of an announcement setting out details of the scheme were posted to members on November 22. It is expected that the Supreme Court will grant its permission for general meetings to be held in January 1986 to approve the scheme. If the shareholders approve the scheme, the quarterly results of the OFS gold mines will therefore not be published for the individual mines but will, for the first time be published for the merged mine, Freegold, early in February 1986.

The last chairman's review dealt at some length with the rationale behind the merger and the circular which will be posted to shareholders before the general meeting will contain a technical advisers' report expanding on that rationale. Events since the first announcement of the intention to merge have only served to confirm my belief that the merits of merging are as strong as ever.

## Economic factors

During the latter half of 1985, the government started to ease fiscal and monetary controls in order to encourage a modest recovery—one result being that interest rates have fallen considerably from their 1985 peak. However, such a situation will be short-lived unless accompanied by more fundamental moves to put the economy on a sounder basis. The most urgent need is for greater domestic capital formation which requires a restructured tax system to encourage savings and investment—thus creating jobs. Home ownership for blacks on a broad front, will lead to greater social stability and will also provide an important boost to the economy and to job creation; the latest announcement on the removal of restrictions and regulations in this regard is encouraging. Also, fewer controls, restraints and regulations are necessary if private enterprise across a wide spectrum is to flourish. Finally, the need for strict exchange controls

is merely a reflection of the underlying political issues and these will have to be resolved if capital is to be encouraged, rather than forced, to stay in the country. It is only with a free and strong private enterprise system that the standard and quality of life of all South Africans can be raised.

## Labour and industrial relations

Anglo American-administered mines remain committed to closing the wage gap between black and white workers. Wage increases this year to black employees varied between 19.5 per cent at the lower levels and 16 per cent at the upper levels, whilst increases to whites ranged from 11 per cent for union men to 12 per cent for officials.

Of all the major issues facing the mining industry, two stand out as being of the utmost importance. The first is the "scheduled person". This is the last piece of legislated job discrimination on the statute books and as such is completely unacceptable. Sustained efforts have been made by the industry to negotiate an end to this with the white unions in terms of the government's directive. The industry has indicated its willingness to negotiate security of employment undertakings with white employees and the formation of an industrial council in order to allay the doubts of the white unions. These attempts have been resisted by one white union in spite of a government deadline to settle the issue by the end of the year. Government must now move promptly in terms of its off-stated intention to open up the way for full black participation in the mining industry without any constraints as to timing or scope.

The second issue is that of black housing. It is in the interests of the country and the mining industry for a greater proportion of our black workforce to be accommodated with their families on or near the mines. As blacks move into more senior operating positions following the removal of the "scheduled person", as they move into more skilled service jobs as black artisans come through their apprenticeship, and as the mines become more sophisticated and mechanised requiring black workers with a significantly higher level of skill than previously so the mining industry will have to invest heavily in the training of our black workforce and so the migratory labour system for these more skilled workers becomes even more inappropriate and wasteful. The numerous constraints and regulations need to be eased to allow our skilled black workers the freedom of choice as to whether to live on or near the mines with their families, or to live in the hostels.

## SUMMARY OF OPERATIONS

	Free State Goldfields		President Brand		President Steyn		Western Holdings	
	1985	1984	1985	1984	1985	1984	1985	1984

## Theatre

## NEW YORK

**As Is (Lyceum):** The first play about AIDS makes gestures toward the whole community the disease affects and focuses effectively on the victim and his protective lover, but this Circle Rep production also has distracting artistic touches to patch over the play's lack of development once the disease is diagnosed. (239 6200).

**Cats (Winter Garden):** Still a sellout, Trevor Nunn's production of T. S. Eliot's children's poetry set to trendy music is visually startling and choreographically felicitous, but classic only in the sense of a rather staid and overblown idea of theatricality. (239 6200).

**42nd Street (Majestic):** An immodest celebration of the heyday of Broadway in the '30s incorporates gems from the original film like *Shuffle Off to Buffalo* with the appropriately brash and leggy hoofing by a large chorus line. (977 9020).

**Brighton Beach Memoirs (46th St):** The first instalment of Neil Simon's mix of memories and jokes focuses on a Depression-era Jewish household where young Eugene falls in love with his cousin. (221 1211).

**A Chorus Line (Shubert):** The longest-running musical ever in America has not only supported Joseph

Papp's Public Theater for eight years but also updated the musical genre with its backstage story in which the songs are used as auditions rather than emotions. (239 6200).

**La Cage aux Folles (Palace):** With some tenuous Jerry Herman songs, Harvey Fierstein's adaptation of the French film manages, barely, to capture the feel of the sweet and hilarious original between high-kicking and gaudy chorus numbers. (157 2626).

**I'm Not Rappaport (Booth):** In moving to Broadway, Herb Gardner's touching, funny and invigorating play about two oldsters retains its stars, Judd Hirsch and Cleveon Little, who almost conquer the world when they think they are just bickering with each other. (239 6200).

**Big River (O'Neill):** Roger Miller's music rescues this sedate version of Huck Finn's adventures down the Mississippi, which walked off with many 1965 Tony awards almost by default. (246 6222).

## PARIS

**Julius Caesar:** Hollywood-style production, using the latest sound and lighting technology, in which Robert Hossein miraculously preserves Shakespeare's eternal truths. Palais des Sports. (46 28 4090).

## WASHINGTON

**Woman and Water (Arena):** The latest instalment in playwright John Guare's American Civil War tetralogy follows further adventures of Lydia Breeze in mid-19th-century Nantucket. Ends Jan 5. (468 3300).

**Area's We All (Opera House):** The play is nothing compared with the performances of Rex Harrison and Claudette Colbert, who cavort delightfully in an old-fashioned drawing-room comedy now making its rounds across America. Ends Jan 5. (254 3770).

**A Seagull (Eisenhower):** Colleen Dewhurst stars in Peter Sellers' latest production for the American Na-

tional Theater, which is bound to be imaginative and untraditional in a tradition Sellers is establishing on his own. Ends Jan 11. (254 3670).

## TOKYO

**A Christmas Carol:** Dickens' story performed in English by Tokyo's only professional English Theatre company, Albion-za, at their new studio theatre. Albion-za Studio. Ebisu. (443 3903).

## LONDON

**Noises Off (Savoy):** The funniest play for years in London, now with an improved third act. Michael Blake-more's brilliant direction of backstage abominations on tour with a third-rate farce is a key factor. (836 8888).

**Starlight Express (Apollo Victoria):** Andrew Lloyd Webber's roller-skating folly has 10 minutes of Spielberg movie magic, an exciting first half and a dwindling reliance on indeterminate rushing around. Disneyland, Star Wars and Cets are all influences. Pastiche score nods towards rock, country and hot gospel. No child is known to have asked for his money back. (834 6184).

**42nd Street (Drury Lane):** No British equivalent has been found for New York's Jerry Orbach, but David Merrick's top-dancing extravaganza has been rapturously received. American Clare Leach is a real find as Peggy Sawyer, and Margaret Courtenay has a field day. (836 8168).

**Me and My Girl (Adelphi):** Sleek, efficient and enjoyable revival of Britain's biggest war-time musical hit with Robert Lindsay in the Lupino Lane role emerging as the best new musical star since Michael Crawford. (836 7611).

**Barnum (Victoria Palace):** Michael Crawford returns to London with his breathtaking performance as the circus impresario, adding one or two new tricks in a likeable merriment of a musical. (834 1317, credit cards 828 4735).

**Guys and Dolls (Prince of Wales):** The 1952 National Theatre production has arrived in the West End, if anything improved by the new casting of Lulu as Miss Adelaide and the notably well sung black Sky Masterson of Clarke Peters. Richard Eyre's production and John Gunter's affectionately lavish designs complement this most joyful and literate of musicals, a fitting tribute to the recently deceased co-librettist Abe Burrows. (930 8881).

**Torch Song Trilogy (Albany):** Antony Sher plays Harvey Fierstein's four-hour triptych of the life and loves of a drag queen fighting for emotional and domestic stability. Truthful playing has the effect of cruelly exposing Fierstein's tackily uneven writing. (834 3678).

**Gigi (Lyric):** Unconvincing stage revival of Lerner and Loewe's film follow-up to *My Fair Lady*, Beryl Reid rising imitatively above the material, Jean-Pierre Aumont and Stan Phillips lending more conventional support. John Dexter designs. Jocelyn Herbert designs. (437 3886).

**Interpreters (Queen's):** Love among the diplomats, according to Ronald Harwood has a superb role for the matchless Maggie Smith renewing a cross-cultural affair with Edward Fox in the shadow of a summit between The Soviet Union and Britain. Fluent direction by Peter Yates of the West End's best new play of the year. (734 1186).

**Lennox (Astor):** A not too critical celebration of the life and music of John Lennon that is enjoyable especially for the musical resourcefulness of the cast and Mark McGann's look-and-sound-alike. (734 4287).

**Camille (Comedy):** Pam Gems's rewrite gives Marguerite Gautier a child for whose future security she exchanges her own from headiness and love. Don Daniels's studio RSC production does not transfer that well, but Frances Barber is an actress to watch. More coughing on stage than in the stalls, for a change. (830 2878).

## Music

## LONDON

**Kiri Te Kanawa with the Philharmonia Orchestra** conducted by Carl Davis in a programme of seasonal music. Barbican Hall (Mon). (538 8891).

**Royal Philharmonic Orchestra** conducted by Norman del Mar with Yehudi Menuhin, violin. Beethoven. Barbican Hall (Thur).

## NETHERLANDS

**Amsterdam, Concertgebouw.** Aleida van Dongen, contralto, Dirk Out, organ, harp and flute ensemble under Erika Waardenburg, and massed choirs in a Christmas Eve concert (Tue); Mahler's Seventh from the Concertgebouw Orchestra conducted by Bernard Haitink (Wed, matinee); Anton Kersjes conducting the Netherlands Philharmonic with Marieke Blankenstein, violin. Bitez, Mozart, Vaughan Williams, Rimsky-Korsakov (Thur). Recital Hall, harpsichord (Thur, matinee). (718 845).

**Amsterdam, Nieuwe Kerk, Bernard Winsemius, organ.** D'Aquin, Bach (Thur, 4 p.m.).

**Rotterdam, De Doelen.** Christmas choral concert conducted by Jan Stolk, with Jan Mulder, organ (Mon). Carol concert (Tue). (1429 11).

**Aartsenburg, Onze Lieve Vrouwe Kerk.** Motets and carols sung by St John's College Choir, with Philip Kenyon at the organ (Mon). (1400).

## TOKYO

**Beethoven's Symphony No. 8.** NHK Symphony Orchestra. NHK Hall (Mon, Wed, Thur). (465 1788; 464-4890). Handel's *Fireworks Suite* will also be performed.

**New Japan Philharmonic,** conducted by Michioyo Inoue. Tokyo Bunka Kaikan (Thurs) (499 1531).

**Japan Philharmonic Symphony Orchestra,** conducted by James Lough-

ran. Tokyo Bunka Kaikan (Wed). (294 3511; 390 8060).

The above are just a few of the many performances of Beethoven's Choral Symphony. Most are scheduled for weekends.

## PARIS

**Christmas Mass: Joseph des Pres - De Beata Virgine sung by Ensemble a Sei Voci and a concert of bells by the Dorothy Shaw Bell Choir from Dallas (Tue, 11 p.m.).** Saint-Roch Church, Metro Palais Royal. (42 77 1853).

## ITALY

**Milan: Teatro alla Scala.** Riccardo Muti conducting Rossini, Haydn and Beethoven (Mon). (86 91 26).

**Rome: Auditorium via Della Conciliazione.** Giuseppe Sinopoli conducting Mahler's 8th Symphony. (Mon). (954 1044).

## VIENNA

**Sebastian Vitti.** Baritone and Ruth McGuire, organ. Boxelude, Bach, Wolff, Karlskirche. (Mon).

**Biedermeyerensemble.** Bach, Vivaldi, Mozart. Evangelische Kirche (Tue).

**Martin Blaker.** organ, Bach, Lutherische Stadtkirche (Wed).

**Vienna Hofburg Orchestra** conducted by Gert Hofbauer. Waltzes and light opera. Hilton Hotel. (Thur, matinee).

## NEW YORK

**Carnegie Hall: New York String Orchestra.** Alexander Schneider conducting. Yefim Bronfman, Cedric Li-

cad, Stephanie Brown, Claude Frank pianos. Handel, Vivaldi, Vir-

ah-Bach, Bach (Tue, midnight). (247 7459).

## WASHINGTON

**New York String Orchestra.** Haydn, Mozart. J. Strav. (Thur). Kennedy Center Concert Hall (254 3778).

## Opera and Ballet

## PARIS

**Palais des Congresses:** Roland Petit and Marcelle National Ballet present *Puss in Boots* animated by Roland Petit's unique imagination and enthusiasm. (4266 2875) from 2 p.m.-5 p.m. Ends Jan 5.

**Tchaikovsky's Nutcracker** in Rodolphe Nureyev's choreography - except for one evening given over to Romeo and Juliette. Paris Opera. (4266 5022).

**Opera:** Caracole presents two light-hearted one-act operas by Ravel and Puccini, the first transporting the public to picturesque Spain, the second to Italy of the Commedia dell'Arte tradition. Salle Favart (429 0311).

**Slask: Polish National Ballet** with its 100 dancers, singers, musicians and 1,800 costumes brings colour and high spirits to the Theatre des Champs Elysees (472 2477).

## WEST GERMANY

**Berlin, Deutsche Oper:** Zar und Zimmermann, produced by Wilfried Rauterfeldt, with Wolfgang Brandel, Gudrun Sieber and Peter Mann. Also The Nutcracker choreographed by Rudolf Nureyev. (34 251).

**Kassel:** This week's highlight is *Il Trovatore* conducted by Stefan Soltesz. The cast is led by Fiorenza Cossotto, Leo Nucci and Carlo Cossutta. Die Zauberflöte brings together Gabriele Fortana, Kurt Moll and Yoko Kawahara. (351 151).

**Frankfurt, Opera:** Falstaff returns with Louis Collier, the title role. Der Rosenkavalier has Helmut Dose, Gail Gilmore, Barbara Bonney and Helmut Berger-Tuna. La Bohème, a Volker Schlöndorff production, is directed by Ulrich Albrecht. In the title role, conducted by Giuseppe Patané. The controversial Das Rheingold by Ruth Berghaus features Gail Gilmore, Barry Mara and Manfred Schenk. Don Giovanni, sung in Italian, rounds off the week. (25 231).

**Cologne, Opera:** Zar und Zimmermann stars Hermann Frey, Ekkehard and Gretel has Andreas Andonian and Dagmar Knobel. Ein Maasenhall has a new cast led by Jan Loewen and Stefan Krawinkel. (20 761).

**Stuttgart, Württembergisches Staatstheater:** There has been much applause for Fidelio, which features Jeannine Altmeyer, Ralf Vilkjain and Robert Schunk. Also Cav and Pag. (80 521).

**München, Bayerische Staatsoper:** Cav and Pag with Julia Varnay, Astrid Varnay, Giorgio Lamberti, Piero Cappocelli and Vladimir Atlantov. La Bohème is expertly conducted by Giuseppe Patané. In the main parts are Gabriela Benackova and Giacomo Aragall. Die Meistersinger has Lucia Popp, Bernd Weik and René Kollo. (21 851).

## LONDON

**Royal Opera, Covent Garden:** Le nozze di Figaro, an ageing Royal Opera production, is brought to fresh life by an attractive cast of newcomers to their roles - Jonathan Summers, Yvonne Kenny, Anne Sophie von Otter, Anna Tomova-Sintov - and by Colin Davis's loving conducting. (249 1005).

**English National Opera, Coliseum:** Jonathan Miller's new Don Giovanni is an interesting assembly of ingredients that doesn't quite mix all the way through, among its more remarkable parts are the Anna of Josephine Burrows and the Leporello of Richard Van Allan. Julius Caesar, the ENO first Handel success, returns with a largely new cast, apart from Valerie Masterson as Cleopatra. (836 3181).

## TOKYO

**The Nutcracker:** Asami Maki Ballet and Tokyo City Philharmonic Orchestra. Tokyo Yuhai Chokin Hall (near Shiba Park). (433 7211).

## VIENNA

**Staatoper (324/2555):** The Magic Flute; Ariadne auf Naxos; Premiere of Korngold's Die Tote Stadt conducted by Hollnagel. Armstrong, Gonda, Stelinsky, Wiener. Stücken by Joseph and Johann Strauss and Dill; Die Puppenheer by Bayer; The Marriage of Figaro; Die Fledermaus with Moser, Fasbender.

## ITALY

**Milan: Aida,** with Ghena Dimitrova and Luciano Pavarotti. Production by Luca Ronconi, scenery by Mauro Pagano (rather too many heavy Egyptian statues) and costumes by Vera Marzot. Lorin Maazel conducts. (86 51 20).

## Exhibitions

## VIENNA

**Kandinsky in Paris 1924-1944:** An extensive collection of oil paintings, gouaches, watercolours and photographs from the last 10 years of Kandinsky's life, organised by the Guggenheim Museum, New York. It shows the culmination of his development as painter of abstract art; his earlier dramatic exuberance giving way to a more refined style with softer pastels and monochrome colours, but the dynamism remains. In sections on Black Backgrounds and Concrete Art Kandinsky's works are brilliantly complemented by those of Klee, Mondrian, Arp, Miro and Picasso, showing his influence on a generation of European abstract artists. 20th Century Museum. Ends Jan 26.

## ITALY

**Florence: Museo di Storia della Scienza.** A History of Spectacles. More than a hundred pairs of glasses from the Zeiss foundation (in E. Germany). This is the first time the collection has been shown publicly. Exhibition also includes engravings by Dürer, Rembrandt and Japanese artists. Ends Jan 11.

**Venice: Museo Correr (Ala Napoleonica):** Folon: Over 200 works by the celebrated Belgian artist, among them 120 watercolours originally as illustrations to Apollinaire, Frevert, Boris Vian and others. A perverse but gentle painter, Folon's use of colour. Includes delightful watercolours of Venice. Ends Jan 19.

**Rome: Museo delle Mura, Porta San Sebastiano:** Trade Routes Between the Mediterranean and the Far East in the Ancient World. The museum is set into the Aurelian walls above the gate through which the Apollin Way passes and is worth seeing in itself. Organised by the Comune di Roma and the Museo Nazionale d'Arte Antica, the exhibition explores the movement of goods (incense, myrrh, silk and spices) to Italy from the east from the 8th century BC to the Middle Ages. Clear and informative and illustrated mainly by photographs and diagrams, but one felt that the exhibition was aimed more at school outings than tourists and that a lot of the information could have been got just as well from a good book. Ends Jan 5.

**Rome, Castel Sant'Angelo: Art And The Banks.** A remarkable exhibition of the masterpieces in the collection of Italian banks, previously hidden from the public. On show are treasures such as Bellini's Crucifixion and Filippo Lippi's Virgin and

Child. The modern art section includes two sculptures by Manzoni and paintings by Morandi, Severini, Stroni, Carrà and D'Onofrio. Ends Jan 5.

## SPAIN

**Madrid, Repetitive Structures.** 22 works by 21 artists on loan from Ludwig Museum in Cologne, among them, Andre, Judd, Smith and Morris engaged in the Minimal movement and Andy Warhol, Lichtenstein and Dine in the Pop Art. Interesting mix of styles and trends. Fundacion Juan March, Castello 77. Ends Feb 16.

**Madrid, 100 Masterpieces of Portugal.** First of its kind from neighbouring country gives a good retrospective of Portugal's works produced between 12th century and today. On loan from museums, churches, palaces and foundations like the Gulbenkian, Centro Cultural Conde Duque, Conde Duque 8-11. Ends Jan 12.

**Madrid, Egon Czuchri.** A selection of artist's drawings and paintings of the past 16 months. One of the top international plastic painters of the 1980s. This show goes on to Espedez, New York and Paris. Fundacion Caja de Pensiones, Serrano 60, Madrid. Ends Feb 2.

**Madrid, Retrospective of Jose Ceana (1947-1953).** More than 250 paintings showing two stages of his short painting life: the first, dark and pessimistic of Spanish rural life and the second characterized by lively colours in a naïf style. Museo Espanol de Arte Contemporaneo-Meac, Avenida Juan Herrera. Ends Jan 20.

## PARIS

**The name of Victor Hugo.** To mark the 100th anniversary of the poet's death, some 1,000 documents - grand and less grand, including portraits, posters, photographs, try to explain the extraordinary phenomenon of Hugo's glorification. Grand Palais, closed Tue. Ends Jan 6. (28 184 10) Petit Palais adds to Hugo's celebrations an exhibition Le Soleil d'Europe consisting of more than 300 of the artist's drawings and 200 manuscripts belonging to the Bibliothèque Nationale. Petit Palais, closed Mon (28 512 73).

**Modern Masters of the Thyssen-Bornemisza collection.** The 107 paintings from one of the world's most remarkable private collections constitute a panorama of modern art which is anything but didactic. Modern Expressionists were one of Baron Thyssen's first loves, quickly

## NEW YORK

**New York City Ballet (NY State Theater):** Lavish costumes by Karinska and choreography by Twyla Tharp. American are featured in the annual Nutcracker performances, ending January 1. Lincoln Center. (875 5571).

**Metropolitan Opera (Opera House):** The week features the first evening performances of Lohengrin conducted by James Levine with Eva Marton. Sie's ballet Parade, Ponelle's Les Mammelles de Tiresias and Ravel's L'Enfant et le sortilège, in an evening called Parade. Also Jean-François Penelle's Le Nozze di Figaro conducted by James Levine with Kathleen Battle as Susanna and Ruggero Raimondi as Figaro. Lincoln Center. (828 0099).

## CHICAGO

**Lyric Opera (Civic Opera House):** The 51st season includes the first evening performances of Lohengrin conducted by James Levine with Eva Marton. Sie's ballet Parade, Ponelle's Les Mammelles de Tiresias and Ravel's L'Enfant et le sortilège, in an evening called Parade. Also Jean-François Penelle's Le Nozze di Figaro conducted by James Levine with Kathleen Battle as Susanna and Ruggero Raimondi as Figaro. Lincoln Center. (828 0099).

## VIENNA

**Staatoper (324/2555):** The Magic Flute; Ariadne auf Naxos; Premiere of Korngold's Die Tote Stadt conducted by Hollnagel. Armstrong, Gonda, Stelinsky, Wiener. Stücken by Joseph and Johann Strauss and Dill; Die Puppenheer by Bayer; The Marriage of Figaro; Die Fledermaus with Moser, Fasbender.

## ITALY

**Milan: Aida,** with Ghena Dimitrova and Luciano Pavarotti. Production by Luca Ronconi, scenery by Mauro Pagano (rather too many heavy Egyptian statues) and costumes by Vera Marzot. Lorin Maazel conducts. (86 51 20).

**THE SAAB 9000 TURBO 16.**

THE TIMES CALLED IT «ONE OF THE OUTSTANDING CARS OF THE DECADE.»

MEANWHILE THE FINANCIAL TIMES IN ITS VERY COMPLIMENTARY TEST THOUGHT «THE DRIVING POSITION FAULTLESS AND THE CONTROLS AS FUNCTIONAL AS THOSE OF A LIGHT AIRCRAFT.»

MOTOR MAGAZINE, ON THE OTHER HAND, WHILST PRAISING THE CAR FOR ITS OUTSTANDING PERFORMANCE, RESERVED THEIR HIGHEST STAR RATING FOR THE WAY THE CAR WAS BUILT AND FURNISHED.

BUT ENJOYABLE AS ALL THE MANY ROAD TESTS ARE TO READ, NOTHING WE WOULD SUGGEST IS QUITE LIKE DRIVING THE 9000 YOURSELF.

SO SEND US THIS COUPON OR RING ANY OF OUR DEALERS AND CONDUCT YOUR OWN ROAD TEST.

AS CAR & CAR CONVERSIONS PUT IT «IT'S A CAR THAT ANY PROSPECTIVE MERCEDES/AUDI/BMW BUYER SHOULD TRY BEFORE PARTING WITH MONEY IN THE £15,000 CLASS.»

## The raiding of a lost classic

King Solomon's Mines directed by J. Lee Thompson  
 Came a Hot Friday directed by Ian Munn  
 The Black Pirate directed by Douglas Fairbanks  
 Alice in Wonderland directed by Lou Bunin  
 Out of the Inkwell created by Dave and Max Fleischer

Christmas comes but once a year, and for film critics there is one of the most comforting thoughts in the whole twelve-month.

"Well, here we are in beautiful downtown Tongola," says Richard Chamberlain as Allan Quatermain in the third and latest screen version of H. Rider Haggard's "best-selling classic" (as the Cannon Films blurb describes it) *King Solomon's Mines*. No film could be better tuned to the Yuletide silly season. Breezy, knock-about, anachronistic, the movie is not so much filmed classic, more "Raiders of the Lost Haggard."

Here is Chamberlain as Harrison Ford substitute, with felt hat and a face of manly stubble. Here is screaming, madcap heroine Sharon Stone, a mark-S Karen Allen or Kate Capshaw. And here are a duo of villains personifying the free world's pet phobias ancient and modern: Nazism (Herbert Lom with bald pate and glittering eye) and the Middle East (John Rhys Davies browning up as the Turk Dogai).

The only thing a best-selling classic can do when it is being shot out of a Cannon is to shut its eyes, stop its ears and hope it lands in one piece. This movie, alas, scarcely even leaves the barrel in one piece. Dashed if I can remember in HRR's original best-seller—perhaps you can—any plot involving a luscious lady archaeologist specialising in Canaanite hieroglyphs (Miss Stone) seeking to rescue her dad (Bernard Archard, wearing out one horse-ship after another in the inter-regation chair) from the Nazi-Turkish axis mentioned above. Surely hero Quatermain's comrades in arms were a Captain Good and a Sir Henry Something-or-other?

Never mind them; they are in the shredding-machine. So is Haggard's exquisitely scenic route to showdown, via dusty desert menace and the howl of mythic Africa. Director J. Lee Thompson and writers Gene Quintano and James R. Silke give us a Theme Park version of the story: a fight to escape a bazooka, then a gunfight and rescue aboard a speeding train, then a terrifying skirmish with some stock footage of elephants, then a close shave with a cannibal cooking pot, then some lions, then a grand finale in the mines themselves, complete with floods, descending ceilings and several other fixtures and fittings seemingly ripped straight out of Indiana Jones's Temple of Doom.

As vulgarisations go, this one

Richard Chamberlain (centre) in the latest remake of H. Rider Haggard's "King Solomon's Mines"

admittedly goes at a gallop. It is preferable to the 1951 version (marginally more faithful), in which Deborah Kerr and Stewart Granger, bringing Queen's English to the fuzzy wuzzy menace, put whole audiences asleep across the globe. But the shoeing budget and imagination are constantly betrayed. The process-shooting is the worst I have seen in any recent film: with back-projected lions giving new meaning to the saying, "The cat sat on the mathe." The sets look run up in the toy department at Selfridges. And when our hero and heroine climb into the cannibals' cauldron, they are afloat amid visibly plastic tomatoes, green peppers and sweetcorn cobs.

This from the film company that recently came within an ace of buying up Thorn-EMI and putting the whole of UK cinema in the cooking pot. For what they are about not to receive, may we be truly thankful.

I forgot to mention the bat people in *King Solomon's Mines*, a semi-tamed tribe who hang upside-down from tree-branches. *Came a Hot Friday* from New Zealand proves what I have long suspected that some Antipodean movie comedies are made by people with a sense of humour different from ours due to their being, like the bat people, upside-down. The blood drains to their heads, the comic centre

of their brains becomes clogged and they see as funny things that are merely loudmouth, raucous or thick-headed. Here a pair of knockabout coppers, the bluff and oleaginous Peter Brand and the fly-diminutive Philip Gordon, attempt to take the population of a town to the cleaners by operating various schemes to cheat at horse-race betting, blackjack, roulette. En route they become involved with a mad Mexican gunman (Billy T. James), resident in New Zealand for reasons I could not divine, and are steered towards a showdown featuring gunfights, fistfights, explosions and anything else that makes a loud noise and spreads itself across the screen.

This is one of those films through which averagely intelligent filmgoers tend to sit with mouth agape for 90 minutes, ever ready (nay anxious) to guzzle and are then discovered at curtain time paralysed with terminal lockjaw. Bland plump, oily, popeyed bluster might have flourished in a better movie. But Ian Munn co-wrote and directed this one. Console yourselves with *The Black Pirate*. Sixty years ago Douglas Fairbanks showed how a swash should be well and truly buckled in this buccanering yarn dimly related to Rafael Sabatini. Made in 1926, it deploys an early Technicolor process that results in far crisper hues than, say, *King*

*Solomon's Mines*. Best of all, there is Mr Fairbanks, a D'Artagnan with the sword, a Don Juan with the rapier, a hero with the lacerating hit. Seen again in 1985, this means of locomotion seems both safer than most modern forms of travel and also more fun.

If in urgent need of taking your children out for an afternoon's entertainment, why not treat them to Lou Bunin's *Alice in Wonderland*. Enchanting animated puppets and equally enchanting live actors (Carol Marsh, Felix Aylmer, Pamela Brown) career through Carroll in this 35-year-old curio that can well hold the course with Disney's animated rival of the same period.

You could also sample the Dave and Max Fleischer season at the National Film Theatre, which runs until December 31. Cartoonists' most famous brothers created *Popeye*, *Koko*, *Betty Boop*, the *Out of the Inkwell* series and others of the cinema's pioneer attempts to make pen-and-ink drawings dash happily about the screen as if stuck with a pin. Fun for the whole family, and a chance to escape the terror of the turkey.

## Dire Straits/Hammersmith Odeon

Antony Thorncroft

Dire Straits may sell too many million records to be fashionable but they certainly know how to put on a marvellous rock concert. And if responding to their music means joining in, in trendless purgatory, Hendon hairdressers and Winchmore Hill estate agents, I had better move smartly to North London.

In fact, the audience for Tuesday night's opening concert of the season was younger and cooler than rumour allows. The atmosphere often resembled a Limehouse opium den but the crowd had the good

sense to sit down for the slow numbers. All in all it was an uplifting experience. The attraction of Dire Straits is that they have never abandoned the electric guitar, which in the hands of their leader Mark Knopfer, becomes an instrument of infinite expression. He plays it as gently as if it were a lute and, apart from a blue sweat-band to keep at bay imperceptible sweat from his face, needs no gymnastic gymnastics to make his effect. The guitar soars and sighs, excites and calms.

Around Knopfer is an excellent band. There is a saxophone, a fiddle, a balance to the guitar, to help bring the songs to a soothing climax and some bombastic drumming ensures that Dire Straits are no milk sops. Indeed, although their records are the hip background music for the dinner parties of nostalgic young couples, Dire Straits in concert are much meatier. The songs are stretched to the ultimate, embroidered with matches from other men's flowers, and the production is as powerful as you might

expect: dazzling white lights, restrained white smoke, a backdrop which expands but does not distract from the music. The new album, *Brothers in Arms*, naturally features but the biggest excitement came with the old favourites "Sultans of Swing" brought the audience to its feet, and there was an ovation for "Juliet," performed by Knopfer in a throwaway manner which owed too much to his mentor Bob Dylan. By the time the band got to "Tunnel of Love" the Odeon was en fête.

## Melons/The Pit

Michael Coveney

On the perimeter of a rock red sandy circle, the cast of Bernard Pomerance's new play solemnly deposit a whole bunch of melons. We are bidden to a melon patch in New Mexico in 1906 where the Indian rights activist Carlos Montezuma (a character based on fact) will lead us through the story of an ancient Apache Indian, Caracol, who has been adopted as a messianic ghost by the Pueblo settlement and outrageously resisted the incursions of an American oil company.

Pomerance is a specialist in re-inventing stories by the use of fractured narrative and shifting the position of his storyteller. The tables of the Elephant Man and Jesse James have been reconstituted in the way with a strong emphasis on anthropological and sociological interpretation. The trouble with *Melons* is that this sort of job is not a graceful one. Caracol is now so hackneyed a subject in modern history and on film that it is no novelty to find it treated in so desperately poor a fashion in the theatre.

All interest in the RSC's presentation, directed by Alison Sutcliffe, must reside in the power of the story itself, which is indeed an extraordinary one. Caracol is presumed dead by his old US Cavalry adversary Stolsky, now employed by the oil company. They meet and exchange reminiscences while a screen decorated with Indian primitivist drawings opens and closes to reveal what happens in snippets. Two oil geologists have disappeared and Stolsky's brother, an impetuous sheriff

(John Cater), sets off to kill a few more savages.

The full blast of the story, alas, is not unleashed until the final half hour by which time we have been diverted by a debate between Caracol and the narrator on how best to improve life on the reservations and heard how Caracol's appetite for atrocity has been whetted by the atrocities visited upon him. This is the heart of the play and the first time, I felt, that an audience is thoroughly engaged. The narrative has stopped passing at last from Anton Lesser's sombre Mon-tezuma to the central character, off again to the sheriff's wife (Susan Colver). Each time, the previous button-holer is sidelined as it sentenced to the sin bin in a football game.

In his wispy white wig Ben Kingsley as Caracol resembles Whistler's Mother putting in a bid for the Anthony Perkins role in *Psycho*. It is not an encouraging start. But from the moment he opens his mouth on greeting David Burke's bluff prospector with the words "Arizona was a better place; I was not so crippled up there" this gravelly-voiced (Kingsley forsakes his tenor reaches), slow-moving lamed eagle of the mountains conveys a millennium of dignity, forbearance and suffering. The familiar Kingsley brisk articulation is allowed to slacken in an unfamiliar, fascinating manner while the eyes twinkle wisely and painfully through a veil of misty, sentimental tears, the tears of ingrained anger. A superb performance in a trying play.

Ben Kingsley

## Letter from Ferrara

William Weaver

The massive Castello Estense that, defined by its moat, dominates the centre of Ferrara can hardly be called a graceful building; and even in recent history it has witnessed scenes of violence and inhumanity. Plaques commemorate the summary execution of anti-Fascists that took place there in the bleak winter of 1943. And yet, in the course of its history, the castle housed poets and painters and musicians; and in the heyday of the Este rule, the Ferrara court was a place of refinement and humanistic thought.

This year the castle is celebrating its 500th anniversary; and the major event of this festivity is the elaborate and well-conceived exhibition devoted to the great Renaissance poet Torquato Tasso, who was arguably the castle's most distinguished guest. It was in Ferrara that Tasso wrote his *Gerusalemme liberata*. It has here that he composed his love for Eleonora d'Este (erotic or platonic? confessed or concealed? Poets and biographers have written at length, but

unconclusively). And it was here, too, that Tasso suffered confinement in his periods of presumed madness.

The show is divided into two parts. The castle itself, in handsome, recently-restored rooms, houses a display of Tasso editions from the elegant first printings to the popular editions of the late 18th century, illustrated by the well-known Matania, who did garish illustrations for cheap weeklies as well. There are also a number of translations to be seen in the many glass cases: names like Leigh Hunt and Lamartine indicate Tasso's appeal to other writers. In the last rooms of the show, play-bills and librettos tell how not only Tasso's works but also the story of Tasso himself interested other artists (and here the list ranges from Goethe to Donizetti).

But even more than writers and musicians, Tasso inspired painters, and the second half of the exhibition (on the upper floor of the 15th century Casa Ronelli) documents this wide-ranging influence. The organi-

zers of the celebration, who are responsible also for the beautiful catalogue, have gathered pictures from all over Europe (as well as from some fairly inaccessible and unfamiliar Italian collections) Battle scenes and idyllic pastorals alternate, as the visitor moves from Caracci and Guercino to Domenichino and Fragonard, from Poussin to Preti. In the 19th century, painters, like poets, found Tasso's life as interesting as his work. Neapolitan artists, to judge by the last part of this show, seem to have been particularly attracted to the poet.

Both Giuseppe Mancinelli and Domenico Moricci portrayed Tasso reading his work at the Este court. Filippo Palizzi's large oil, *The Meeting of Tasso and Marco Scipione*, on loan here from the Palazzo Reale in Naples, is a virtually unknown work, a romantic landscape, in charming contrast with the more heroic tone of many of the pictures.

In recent years Ferrara has not been a great city for theatre. But now, like many

other small cities in the area, it is part of the circuit of the ATER, an organisation sponsored by the regions of Emilia and Romagna. In addition to an ATER symphony orchestra and an inventive ATER ballet, there is also a series of plays which regularly visit Ferrara's capacious and sumptuous Teatro Comunale. During my stay, I caught up with a production of Pushkin's four short dramas, as devised by the exiled Soviet producer Yuri Lyubimov, and presented under the title of one of the plays, *A Banquet during the Plague*.

A few years ago, when the producer's expulsion from his homeland was announced, Bologna and ATER welcomed him enthusiastically and promised to put the Arena del Sole, a huge barn of a theatre about 100 years old, at his disposal. The restoration of the Arena is not quite finished, but the love affair between Bologna and Lyubimov has already ended in a storm of reciprocal charges: pettifogging bureaucracy from one side, megalomania from the other. The Pushkin production, Lyubimov's second staging in Bologna, will also be his last as far as ATER is concerned.

It cannot be said that Lyubimov has gone out with a bang. The four little Pushkin works—*Macbeth* and *Salome*, *The Stone Guest*, *The Merry Wives of Windsor*—and the play that gave the programme its title—are rich in poetical magic, but they read better than they play; and run-time is a cruel master. A long, funeral banquet table, does not enliven them. The mostly young cast had already, for the most part, succumbed to the spectral plague of Italian actors: infatuation with the sound of one's own voice. Even the gifted Remo Girone, the Don Giovanni, was allowed to crown. The *Macbeth* was filled with a well-disposed, largely subscription audience, but the reception was tepid. There was more theatre in the great exhibition across the street.

Castello Estense, celebrating its 500th anniversary

## Continued from Page 14

followed by Kandinsky and the Russian avant-garde. Monet, Renoir, Degas, Lautrec create another centre of interest, while Picasso's *Homme à la Clarinette* is one of the Baron's favourite acquisitions. Musée d'Art Moderne, 11 Avenue du Président Wilson. (47516127). Closed Mon. Ends Jan 5.

Old and new: State acquisitions over the last five years. The 240 exhibits range from an Egyptian pleasure boat to contemporary artists and comprise paintings, sculpture, pieces of furniture and objects d'art. Among the chef-d'œuvres there is Vermeer's *Astronomer*, Frans Hals' *Jester Playing The Lute* as well as works by Manet, Monet and Seurat. Lucas Cranach's *Melancholy* comes from a provincial museum. Grand Palais. Ends Feb 3 (42603226).

David Hockney: With lithographs in crude blues, greens and reds Hockney creates the mood of eternal holidays. Surprisingly, artistic subtlety comes with his collages consisting of hundreds of photographs assembled slightly out of line. A chestnut tree, the Place Furstenberg acquire new poetry in a kaleidoscope-like vision. Galerie Claude Bernard, 7-9 rue des Beaux-Arts Ends Jan 15 (4328707).

## WEST GERMANY

Berlin, Nationalgalerie: Art from 1945 to 1985. With 500 works by 220 artists the Berlin National Museum will display an extensive exhibition of post war art. Ends Jan 12.

Stuttgart, Neue Staatsgalerie: A retrospective of 81 works of the British artist Francis Bacon (born in 1909). The works, covering 40 years, are on

loan from the Tate Gallery, London. Ends Jan 5.

Bremen, Kunsthalle am Wall 207: Klee drawings and paperworks from 1921 to 1933. Ends Jan 5.

Düsseldorf, Kunsthalle Grabbepplatz: Joel Shapiro: First stop for an exhibition covering 50 abstract sculptures and paintings by the American artist in the last five years. Ends Jan 12.

Essen, Museum Folkwang, Goethestrasse 41: To honour the German painter Louis Corinth on the 80th anniversary of his death, the exhibition contains 90 paintings and 40 graphic illustrations. Ends Jan 12.

Munich: Haus der Kunst, Prinzregentenstr. 1: Karl Spitzweg (1808-1885): 500 drawings and paintings with 70 cartoons from four artists, among them Daumier, Dost, Gavarni and Grandville. Ends Feb.

## NEW YORK

Metropolitan Museum of Art: The travelling show India, arrives from Washington with 350 examples of six centuries and numerous flourishing periods of art and craft. Ends Jan 5.

Asia Society: Complementing the Metropolitan show, Alber's India celebrates on the 40-year reign of the sixteenth-century Mughal emperor who built Fatehpur Sikri and inspired the works represented here by 80 paintings as well as metal work, carpets, and textiles. Ends Jan 5.

Museum of Modern Art: Making generous use of the 1920s Collection of the McGraw-Hill Corporation, this exhibit of geometric abstract art of the twentieth century entitled *Constructivism* of Form covers the Russian

Constructivists and American Minimalists as well as Cubism and Bauhaus. Ends Jan.

Guggenheim Museum: 55 major sculptures of the 20th century, including Giacometti, Nevelson, and Johns, are part of the theme *Transformations in Sculpture*, meant to cover pop art, minimalism and Arte Povera, among other movements of the past 40 years. Ends Feb 16.

Pierpont Morgan Library: 200 British photographs from the Victoria & Albert Museum cover Fox Talbot to Julia Margaret Cameron and Lewis Carroll in the years from 1839 to 1906. 39th St & Madison Av. Ends Feb 2.

## WASHINGTON

National Gallery: The Treasure House of Britain collects 70 objects from 200 stately homes in a show mounted and decorated to look like the quintessential stately home, with paintings by Holbein, Rubens, Van Dyck, Hogarth and Turner among many others, as well as Chippendale furniture, Meissen and Sèvres porcelain and tapestry, jewellery and armour. Ends Mar 8.

Hirshhorn: The recent allegorical and romantic strain in Italian painting is represented in a show of 46 works, primarily paintings, from 13 artists, including lesser known artists such as Carlo Bertocci and Patrizia Caltabiano as well as the well known Sandro Chia, Mimmo Paladino and Carlo Maria Mariani. Ends Jan 5.

National Gallery: 118 Master Drawings from the fifteenth to nineteenth centuries lent by the Swedish Nationalmuseum include works by Dürer, Rembrandt, Rubens, Van Dyck and Goya. Ends Jan 5.

## Saleroom/Antony Thorncroft

## Boom continues unabated

The leading salerooms break up for Christmas this week in a sanguine mood. This first half of the season (it began in September) has just about maintained the boom of recent years and while Wall Street, and to a lesser extent the London Stock Exchange, continue to prosper the long forecast collapse in the art market will remain just a nasty rumour.

The sales figures released yesterday show Sotheby's with a worldwide autumn turnover of £187m, a fall of 7 per cent on the same months of 1984; Christie's holding its own with a 5 per cent rise in sales to £158.3m; and Phillips profiting from its expansion into the British provinces with a full year turnover of £60.3m, a jump of 20 per cent on 1984.

Sotheby's figures suffer from the rise in the value of sterling against the dollar compared with the situation a year ago. Last Christmas Sotheby's was able to report a 43 per cent jump on the previous autumn, mainly because New York had overtaken London as its main centre and the poor pound was almost at parity with the dollar. If it translates this season's results into dollars it arrives at a very reasonable \$270m, an 11 per cent rise on the \$242m of autumn 1984.

In the old days Sotheby's and Christie's provided detailed information on regional sales, revealing whether London or New York was the bigger contributor to the turnover. Now there is no breakdown, but New York must remain the key centre, not least because of its impressionist sales. On one evening session in November, for example, Sotheby's brought in £18.7m from an Impressionist auction, and the series of sales at Christie's totalled £19.5m.

Christie's has also been boosted by its first sale at Monaco. It was able to negotiate the auction of the collection of Sir Charles Clore's collection and brought in £6.3m over a weekend. Its traditional contacts with the Devonshire family secured the Old Master prints from Chatsworth which contributed £3.6m, while three more exceptional prices were the £1.438m paid for Gericaul's *Buste de Notre*, £734,000 for Chagall's *La chambre jaune*, and £1m for Terbrugghen's *Lute-player* carousing with a young woman.

The basic structure of the art market remains constant—the top quality items do very well while demand in the middle and lower price ranges is less strong. As long as Impressionists remain in international favour salerooms will flourish. Sotheby's sold eight works of art this autumn in this sector for over £1m each.

Hessische Landesbank - Girozentrale -  
 London Branch,

wishes all its customers and friends  
 a Merry Christmas and  
 a successful 1986.

## Framework for the markets

ORIGINALLY conceived as a response to various comparatively minor collapses of investment companies, the new financial services legislation is likely to come into force amidst the turmoil which will follow the "big bang" restructuring of the securities markets. No longer solely aimed at protecting investors, it is now designed as a framework within which the UK can flourish as a major international financial centre. These are ambitious objectives.

First, it should be said that the system of regulation outlined in yesterday's Bill is highly elegant in its attempt to build flexibility into a tough framework. Bogue confusion in the minds of the public and self-regulatory methods should in any case be ignored: any workable system has to combine both, and the main question is how the two approaches can be smoothly combined. The big difference between the proposed British framework and the existing US system is that most of the detailed rules will stay off the statute book and will be more easily adapted to changing conditions and novel circumstances.

Elegance, however, is not the same as practicality. The framework set out in the Bill deserves the strongest support, but it will not work without a very high level of commitment from the practitioners of the City of London and elsewhere. For one thing, the concepts are subtle. The distinction between statutory regulation and self-regulation are not widely understood, as public and parliamentary reactions to the Johnson Matthey Bankers and Lloyd's scandals have shown. There is a legitimate fear that responsibility for future scandals will become blurred, and that a future Secretary of State, under pressure, will resolve to take the remedies more directly into his own hands.

Second, the structure will be demanding in its use of the time and energy of many of the most talented practitioners, who will need to sit part-time on innumerable self-regulatory organisations (SRO) boards, disciplinary committees, appeal tribunals and so forth. Unless able people take on these burdens the SROs will not be able to build up their required reputations.

Concern about the need to encourage quality among the SROs is evident in the decision not to give the Securities and Investments Board power to intervene directly in the rule-

making processes of the SROs. The argument is that the SROs have to be able to make real decisions because leading practitioners will not bother to become involved with rubber-stamp bodies. But this raises a corresponding question mark over the authority of the SIB.

Thus a weak point of the Bill and its associated SIB regulations is the prospect of a tangle of overlapping and possibly competing SROs leading to confusion in the minds of the public and legal disputes over jurisdiction and rulebooks. The parliamentary committee will no doubt wish to probe this area carefully. And there are not especially high hopes that the decision of the Takeover Panel, that classic self-regulatory body, to steer well clear of the proposed statutory framework. The panel judges that statutory backing would risk dragging it into a legal snarl-up.

**Prospects**

On recent precedents, certainly, the Government's prospects of getting this piece of financial legislation right at first time are not especially high. The 1979 Banking Act is already having to be tightened up, and the 1982 Lloyd's legislation may well come up for amendment next year. The big difference with the current Bill, however, is that it already contains within it the basis for a more centralised system. Since the functions of the SROs could be absorbed directly into the SIB, and the functions of the SIB itself could be taken over by the Department of Trade.

Few would argue that an army of civil servants would regulate sophisticated financial markets efficiently. The department has not made a notable success in the past of supervising the licensed dealers for instance. But if the degree of delegation proposed in the Bill does not work, a resort to an inflexible, bureaucratic system is inevitable.

Although New York and Tokyo may thrive as financial centres despite a heavy regulatory yoke, they have the comparative advantage of much larger and more dynamic underlying economies, and substantially bigger domestic capital markets. If London is to remain in this league, it needs to be both nimble and clean.

## Something is rotten...

DENMARK is going down a dangerous road that could eventually take it far away from its partners in the European Community and in Nato. Long before Lord Carrington, Secretary General of Nato, made his attack yesterday against Danish aloofness from some basic Nato policies, it was plain that Copenhagen was out of step with the nuclear strategy of the alliance. And long before the last summit meeting of the European Community it was plain that the Danes had no interest in reforming the Community to make it more business-like.

The occasionally contradictory course of Danish policy cannot be understood without reference to internal politics. A centre-right minority government under Mr Poul Schlüter depends paralytically for survival upon the support of the Radical Party. The Radicals, with only 10 seats of 179 in the parliament, thus enjoy influence transcending their numerical strength.

They support Mr Schlüter's policy of economic retrenchment which has brought under control what had threatened to become an uncontrollable budget deficit. Inflation has been greatly reduced.

**Tradition**

But the Radicals have an anti-militarist and isolationist tradition dating back to their origins as a party in the 19th century. When the Nato and the Community are concerned, they side with the Social Democrats and parties farther to the left. So Mr Schlüter went to the European summit unable or unwilling to make any but the smallest concessions on matters such as more majority voting in EEC institutions or a greater role for the European Parliament.

Thus, also, he has had to acquiesce in the refusal of the parliament to vote funds for the Danish share in that part of the Nato infrastructure programme which relates to the deployment of cruise and Pershing weapons. Like Norway, Denmark has always been a special case regarding the stationing of nuclear arms. With the agreement of the alliance, both countries refused to accept nuclear arms in time of peace. But the Danish parliament now wants the country

kept free of such weapons also in times of crisis and of war. That would make a nonsense of Nato strategy which is based on a strategy of flexible response including, in case of need, a resort to nuclear strikes. How can British and West German troops stationed in northern Germany co-operate with Danish forces by their side with completely different strategic assumptions?

Opposition to the Danish left to Nato nuclear policies can be explained readily enough as a success for the peace movement which has exerted influence also in the left in other countries. It is harder to understand its obstruction to EEC reform. The usual socialist suspicion of the Common Market as a capitalist camp has played its part: so has the nationalist attitude understandable in a small and comfortable country.

The simple fact is that the EEC is unpopular in Denmark. That may seem absurd given that Denmark profited greatly from the common agricultural policy, but it needs to be reckoned with. Mr Schlüter cannot risk an election on external issues since he would probably lose. His only hope is to put the economy to rights, which means continuing along the chosen path and eliminating an increasingly unsustainable external current deficit, and then facing the electorate.

In the meantime the Social Democrats, the largest party though they are in opposition, have a key role to play. It was they who brought Denmark into Nato in 1948; they took the country into the Common Market; and in 1978 they backed Nato's twin-track decision to deploy cruise and Pershing weapons under certain conditions that have now been met.

It is not too late for these Social Democrats to return to their original line. The battle between rival factions in the party has not yet been decided. We shall know a bit more on January 8 when the Social Democratic parliamentary group plans to decide its attitude to the Luxembourg proposals for EEC reform. In taking its stand the party should remember that if it throws out the package, Denmark's EEC partners will be less, not more likely to listen to its views next time.

Sir John Cuckney

IT WAS only yesterday that the scale of the financial crisis facing Westland, Britain's sole helicopter manufacturer, became fully apparent. Before the Sikorsky-Fiat rescue plan was signed at 4 am yesterday by the company's principal bankers, Westland was, in the words of the chairman Sir John Cuckney, "perilously close to receivership."

After charging £106m of provisions in the year to last September, Westland's balance sheet shows debt of £92m against equity of only £22m, a mismatch which left the company in danger of breaching its borrowing limits under the articles of association. The pre-tax loss struck at £95m on sales of £308m compares to a £25m profit on £295m turnover in 1984.

Behind the raw figures lies a relatively simple explanation: Westland's disastrous decision to build the Westland 30, a helicopter for which there is no current market. In particular, the continuing failure to secure a contract for 21 Westland 30s from India left the company with a mounting inventory, soaring borrowings and next to no work in the short-term.

With receivership staring Westland in the face, it is easy to see why Sir John and his board found the rescue plan involving Sikorsky, the US helicopter maker, and Fiat of Italy so attractive.

It was, unlike the rival European consortium plan, a firm offer on the table: the two partners were willing to inject a total of £30m capital in exchange for a 29.9 per cent equity stake (including preference shares), thus helping to restore the company's balance sheet; the proposal was agreed by Westland's principal banks, National Westminster and Barclay's, which have converted some £21m of debt into equity; and, finally, there was a guarantee of 1m man hours of work over three years, plus a licence to develop, market and manufacture the black Hawk medium-weight helicopter in a "significant number of territories."

The financial merit of the Sikorsky and Fiat rescue is that it injects an immediate £30m into Westland's battered balance sheet with a further £19m available if United Technologies elects to subscribe to new shares. Along with the rights issue to existing shareholders raising £14.2m, and the bank agreement to convert current debt into preference shares, Westland emerges as a new company with the pro-forma percentage debt to shareholders' funds falling from around 384 per cent to 17 per cent.

By financial standards, details about the European counter proposal are known only

than that the four companies—British Aerospace, Aerospatiale, MBB and Agusta—are prepared to subscribe £30m between them for a 29.9 per cent shareholding. There have been indications that GEC is willing to put up money, while the four companies are prepared to increase their equity stake if necessary.

On the workfront the two measures are designed to plug the gaping hole in Westland's order books between now and 1990, when it begins to build the EH 101 naval and utility helicopter with Agusta of Italy. Although the company argued strongly yesterday that the Sikorsky work offer was more secure than the European proposals, some uncertainties remain. It must be questionable, for example, whether the company can sell substantial numbers of the Black Hawk for as long as the UK Ministry of Defence, which has said it has neither funds nor a requirement for it, refuses to buy the aircraft. Neither Westland nor Sikorsky will be drawn on the identity of the "other territories" mentioned on the agreement.

The deal also risks jeopardising work from the European companies with which Westland has had a long association. Aerospatiale estimates, for example, that it has some £17.5m of work—representing 500,000 manhours—with Westland, which could well be withdrawn.

On the face of it, the European proposals seem to offer at least as much to Westland, both in the long and short term. The consortium offers work amounting to 3.3m manhours over five years, compared to Sikorsky's 1m manhours over three years. It also offers work on a family of three military helicopters which would be jointly produced by Westland and its European partners, with the full support of at least four European governments, over the next 10 to 20 years.

The achievement of Mr Michael Heseltine, the UK Defence Secretary, and his fellow European ministers in reaching the political agreements which would underwrite these proposals should not be underestimated. Sir Ray Godwin, managing director of British Aerospace, said yesterday, it took the aerospace industries and the governments of the same four countries nearly three years to negotiate the deal. In the last few days, he made clear their support for the Heseltine view that Europe's defence industries must combine in the future or

## THE RESCUE OF WESTLAND

## Signed, almost sealed but not yet delivered

By Bridget Bloom and Lionel Barber

Faced with the scale of losses that were revealed yesterday, Sir John Cuckney decided to go for the commercially simpler and immediately more viable option.

The European consortium has not given up, however. Executives of the four companies involved, and representatives of GEC, which showed an interest only at a late stage last week, were meeting yesterday to try to match the Sikorsky and Fiat deal.

Clearly, the Sikorsky deal has the advantage: it is signed, and virtually sealed between the Westland Board and Sikorsky and needs only the approval of

face the danger of succumbing one by one to US competition.

The Defence Secretary may have little support in the Cabinet, but sympathy has come this week from both the Tory defence committee in the Commons and the all-party select committee on defence.

All this suggests that had the European situation been canvassed earlier, it might have succeeded. So why was it that almost nothing was done until late November, when Westland's stock market value had tumbled from over £100m in the summer to under £40m?

The answer is to be found in a chapter of missed and bungled

published yesterday, show, the company found itself trying to sell the W30 when the main oil exploration and US commuter market for it was weak.

It then began to build the 21 aircraft which the Indian Oil and Gas Commission had ordered. In July 1984, it intended to buy, feeling secure in the knowledge that the sale was being backed by British overseas aid funds. But the sale has never been confirmed and a large part of the company's liabilities today are unsold or half-built W30s.

But Westland was not helped by the MoD. The Ministry's Air Staff Target (AST) 404 outlined originally in 1978 a need for a new medium weight helicopter to transport troops on the battlefield, and in late 1980s which Westland hoped to fulfil with a so-far undeveloped variant of the W30.

In the old days of defence procurement, given that Westland was Britain's only helicopter maker, the odds were not against it. But Mr Heseltine's tougher new policies decreed a competition for AST 404 (which, ironically, Sikorsky's Black Hawk entered). It was where does this leave the MoD? The answer is simple: the Forces believed the W30 to be an inferior aircraft.

Confusion set in, however, when last spring the British army decided to redefine its requirement. AST 404 was put "under review" in late 1984, and there it remained until the present crisis, during which Mr Heseltine has said that the MoD has neither funds nor a requirement for such an aircraft until the mid 1990s. The prime candidate would then be the new collaborative medium-weight helicopter, the NH 90, he said.

The third problem came in May. Recognising its worsening position, Westland's board undertook an exercise to sell the company. It was then that Mr Alan Bristow, formerly of British Aerospace, immediately began to sense the true financial state of the company.

Sir John, veteran of many a City rescue, faced an unenviable situation, when he was called in by the Bank of England to take over as chairman in June. His calls on the industry and defence departments produced the new contract for the whole affair to start. A Government refusal to put temporary money into a Westland rescue, Sir John then set about the search for a private sector solution, which he was sure had to involve an international partner.

Neither the DTI, which spent £50m into the W30 development in 1982, nor the MoD appears at that time to have weighed up the implications of the Cuckney solution, although

both under Norman Tebbit and its present incumbent, Lord Brittan, the industry Department has consistently adopted a non-interventionist attitude.

Neither were the European or British companies interested at the time. Cynics would argue that they moved only when Sikorsky entered the arena, being prepared until then to see Westland collapse in the interests of reducing overcapacity.

The case for Mr Heseltine's defence is that Westland was not directly his ministry's responsibility and that his eye was on other matters: negotiations on the European fighter were in a tense state for the whole of July and some of the wags and these were followed by the secret talks to sell British aircraft to Saudi Arabia in a £40m deal concluded in September.

Though Aerospatiale and Agusta held separate talks with Westland in October, it was not until November 14 when he returned through Rome from a Far Eastern visit that the Defence Secretary began to focus hard on Westland's plight. So where does this leave the MoD? The answer is simple: the Forces believed the W30 to be an inferior aircraft.

Confusion set in, however, when last spring the British army decided to redefine its requirement. AST 404 was put "under review" in late 1984, and there it remained until the present crisis, during which Mr Heseltine has said that the MoD has neither funds nor a requirement for such an aircraft until the mid 1990s. The prime candidate would then be the new collaborative medium-weight helicopter, the NH 90, he said.

The third problem came in May. Recognising its worsening position, Westland's board undertook an exercise to sell the company. It was then that Mr Alan Bristow, formerly of British Aerospace, immediately began to sense the true financial state of the company.

Sir John, veteran of many a City rescue, faced an unenviable situation, when he was called in by the Bank of England to take over as chairman in June. His calls on the industry and defence departments produced the new contract for the whole affair to start. A Government refusal to put temporary money into a Westland rescue, Sir John then set about the search for a private sector solution, which he was sure had to involve an international partner.

Neither the DTI, which spent £50m into the W30 development in 1982, nor the MoD appears at that time to have weighed up the implications of the Cuckney solution, although

shareholders, expected to meet on January 14, to make it fully effective.

Yet an intriguing question remains. Mr Heseltine may be the foremost advocate of the European solution, but the roll-call of those now prepared to go public on their belief in the importance of European collaboration is growing. BAE's Sir Raymond Lyons, Lord West's Sir John Cuckney, and the Ministry of Defence all failed to appreciate the seriousness of the situation and, therefore, what sort of remedies were required.

The first problem was the company's choice in the late 1970s of the W30 helicopter as the vehicle to help it enter the civilian helicopter market in the mid-1980s and lessen its dependence on military sales. As the Westland documents

## Pulling for Standard

Patrick Macdonald and David Gemmill rowed together at Oxford in the early 1960s—and will soon be pulling together at Standard Chartered Merchant Bank.

Macdonald, 46, joined Standard as chief executive from Jardine Matheson a couple of months ago. Gemmill, 44, is now leaving Lazard Brothers, where he has headed the international division since 1981, to become Macdonald's deputy.

The Standard crew is also being reinforced by two other Lazard directors, Peter Godwin, 53, and Giles Dereham, 47, and by Chinese-speaking Catherine Whitley, 31, who has been responsible for Lazard's business in China.

Lazard's chairman, Sir John Wood, 62, is a former Lazard colleague of Lord Baring, head of the Standard Chartered group, stressed yesterday that the exodus was amicable.

Not so much a defection—more a natural progression, you might say.

Lazards finally decided yesterday to merge its unprofitable international division with its corporate finance activities. The bank had been big in export finance but the nature of the international business had changed—and in spite of energetic efforts to develop new lines in the field "the bottom line has not come through," Nott said.

The lanky, bespectacled Gemmill, who has worked for Lazards in Africa, South America and the Far East, "totally agreed" that this strategy was right for the bank. But it was natural that he, and the other international specialists, should wish "to graft our skills on to a merchant bank with a worldwide presence."

Standard Chartered, in contrast to Lazards, is merging its corporate finance division into its international division; and

turning its sights increasingly abroad.

The transplant from Lazards fitted Standard's requirements neatly. Gemmill will run the advisory services department, which will cover both UK and overseas corporate finance—"the fee-earning part of the bank."

Dereham, who helped set up the first private sector merchant bank in India, and has been deeply involved in a wide range of projects there, will be responsible for Standard's operations in the sub-continent.

Godwin, 53, who has worked with Lazards for 27 years, will be responsible for Standard's business in Africa and North-East Asia. He spent two years in Korea in the 1970s and has been involved in UK trade promotion in both Korea and Africa.

## Closer weave

Barry Reed, chairman of the Austin Reed group, and Norman Sussman, chairman of the family company L. S. and J. Sussman, shirtmaker to Marks and Spencer, were able to congratulate each other yesterday when Princess Anne opened the British Apparel Centre in London's West End.

They had worked together for several years to bring the new organisation into being. Reed, chairman of the British Knitting and Clothing Export Council, and Sussman, chairman of the British Clothing Industry Association, have long wanted a stronger, more integrated, clothing industry.

Reed represents the marketing arm of the industry, and Sussman the manufacturers. "We are no longer the rag trade but a major force in British manufacturing industry," says Reed.

## Hilleary's run

Artist Alasdair Hilleary—who likes to use the pseudonym "Loon"—has been riding the Cresta Run for the last five years, "when my father introduced me and my brother to this mad sport."

His fortitude and sportsmanship has brought its own reward, however. Hilleary, aged 32, has just completed a group

portrait of the St Moritz Tobogganing Club, commissioned to celebrate the club's centenary. It includes 64 of what he describes as "the more colourful members" took him four months' solid work and is to hang in the Cresta clubhouse in St Moritz.

He has made a specialty of group portraits and is delighted that his latest work has commanded what he says is an almost record price for such a canvas—£8,400.

## Gold bricks

Australia's latest gold strike is right in the city of Perth. At the state mint to be precise. Officials say that about 1,000 ounces of gold, which vapourised during the mint's 86-year history of refining, has impregnated the building and is to be recovered.

Mind you, to get the gold worth \$500,000 the buildings of the mint will have to be demolished and the walls and ceilings smelted. But the mint's processes are to be moved to a new site anyway. The golden windfall will go towards the cost.

## Mother's pride

In yet another spirited try to steer the Guinness Peat bid for Britannia Arrow to success, merchant bank Morgan Grenfell has been ringing round the Britannia mail shareholders.

The bid is being commended to them as an offer they should not refuse.

The wheeze went awry when they called Mrs Henry Newman of London. She happens to be the mother of Michael Newman, the hard-fighting chief executive of Britannia who is trying to keep out of GP's clutches.

Mrs Newman bought 10,000 Britannia Arrow shares at 20p when her son took over. They now stand at 150p. Her faith in her boy was as strong as it had ever been, she told the luckless bankers.

LOUIS BRANDT

In 1879, Louis Brandt founded Omega. Our automatic perpetual calendar watch is programmed to the year 2100. Fashioned from 18-carat gold, it incorporates a crown set with seven diamonds, a transparent back, and a hand engraved movement.

It may be seen at only a few, carefully selected jewellers.

## AFTER THE ANGLO-IRISH AGREEMENT

## Unionists peer into a vacuum

By Margaret van Hattem, Political Correspondent

NO ONE expected the Ulster Unionists to like the Anglo-Irish Agreement. It was, after all, designed to twist their arms into sharing power with the nationalist minority. But few expected them to have it as passionately as they apparently do. Even Mrs Thatcher confessed this week "the reaction has been much worse than expected—one is trying to find out why."

The announcement that Dublin was to be given a formal role in Ulster policy-making drew an estimated 100,000 on to the streets three weeks ago in protest, united the unionist community and the rival Unionist parties in their opposition, and prompted loyalist threats to make the province ungovernable.

But how far will it go? Is all-out confrontation between the Government and the Unionist community now inevitable? Can the Unionist political leaders rally the community behind their threatened campaign of resistance? And where precisely is that campaign leading? The general feeling is that all out confrontation is far from inevitable; that Ulster is in no mood to fight. Many expect that there will be trouble next summer, with loyalist marches confronting the police on the streets. Some fear loyalist paramilitary activity, not least in the south, if the political temperature rises sufficiently. But no one is talking of widespread armed resistance. Nor do they believe there will be crippling industrial action, or widespread civil disobedience. Not unless the Government totally mishandles the situation.

What has particularly surprised and disturbed the Unionist community is the hostility of the professional middle classes. The 100,000 who rallied at the City Hall in Belfast last month included many of the so-called "fur coat brigade"—the people who had supported the 1972 Sunningdale power-sharing agreement, people who had never taken to the streets before in their lives.

As Sidney Elliott, lecturer in politics at Queens University, recounts: "It was a very different crowd from anything I'd ever seen before. There were some very well dressed people there ordering the yobboes on the scaffolding to shut up. Now

if that were to happen in, say, a football crowd, those people might find themselves being pelted with empty beer cans—or worse, empties that had been refilled. But they felt no compunction in making their presence felt—they clearly had no experience of being in a crowd."

So why were they there? What was it that so concerned, say, Mrs Sandra Scott, a middle-aged part-time clerical worker at the Queens University economics faculty—a Unionist, but one who has in the past contemplated voting for the non-sectarian Alliance Party, and one who has never before been involved in any political activity.

"I was angry," she says. "I'm not against power-sharing. I'm very middle of the road. But I felt it was very undemocratic. They never ever consulted the unionists. If they had consulted them and then decided to overrule them, I'd have said 'But there should have been consultation. Even now no one here is being told what is going to happen.'"

She had not, she adds, been worried that the rally might turn violent. "I knew there would be a lot of people like me there. I'd talked about it with my friends, and a lot of them were going."

That protest took place three weeks ago. But the scene of the demonstration, even without the crowds, holds some of the answers Mrs Thatcher is seeking. It was a wonderfully old-fashioned. It lacks the tinsel vulgarity of a Christmas tree. It is a whiff of real pine needles mingling with the smell of coal fires. The vast square around the Victorian City Hall is lit up like something from an old picture book, the bare branches of the trees wreathed in fairy lights and out front, the biggest Christmas tree you ever saw. A magical place to take small children to watch a public fireworks display. As an estimated 10,000 did three nights ago, with rockets, Catherine wheels and lots of whizz bangs.

London must have felt like this once, many years ago, when it was the capital of an empire, and of a nation with which many Unionists still identify when they say they are British.

"They are loyal to a Britain which no longer exists," says the Rev Derek McKelvey of the Ballylbert Presbyterian Church in North Down. His tone implies that they have not yet forgiven it for not

Christmas shoppers in Belfast yesterday

existing. His is a mixed congregation—part commuter belt, people used to hearing themselves described as top people, heads of various concerns; part council estate tenants, members of Orange Lodges, youngsters who "react with their guts" to all the political slogans, who thank him politely for his sermons on reconciliation "without having heard a word."

The reaction throughout his flock to the Agreement was one of "deep hurt," he says. "A few were annoyed, an even smaller proportion were outraged. But above all, the people here don't want an independent Ulster. So there's an unwilling acceptance—a feeling 'we don't like it, we didn't want it, we may have to put up with it for a while. But maybe it will all fall flat on its face anyway, once Garret FitzGerald is out and Charlie Haughey is Prime Minister in the south.'"

Some churchmen would go further. Robin James, Bishop of Down and Dromore, warns that in Northern Ireland, "violence is always possible. What has really angered people has been the secrecy, even as a breach of trust, and the feeling that the political scene is slipping further and further from their influence. They feel disenfranchised. The vast majority in my diocese, people I'd call moderates, are very

frustrated, very angry, and they don't know where to go from here."

And that goes to the heart of the profound distress in the unionist community at the moment. No one has really spelled out what the options are set to fight by-elections on January 23 and are talking of "withdrawing consent" thereafter from the Government and all its institutions in the province.

But what then? And with what end in view? Many people in the unionist community, including some but not all their political representatives, accept that there cannot be a simple return to the status quo ante. Mrs Thatcher, they agree, will not back down—least of all in response to loyalist violence.

As one well known Unionist politician says: "The real decisions will have to be taken after the by-elections, when the Unionist community will have to be brought to face with reality and painful options will have to be spelled out. The fact is we can't beat Thatcher and go back to direct rule; we can't defeat the Agreement except by replacing it with something acceptable to large sections of

A few politicians have started flogging ideas. Mr Frank Miller, General Secretary of the OUP, has been talking in general terms of "renegotiating the terms of our membership of the Union," though he does not care to spell out what he means.

Mr Harold McCusker, former OUP MP for Upper Bann, recently told the Commons: "The people of Northern Ireland whom I represent would rather be governed by a Catholic nationalist in Northern Ireland than a Minister from the Irish Republic who lives in Cork and who did not know where Northern Ireland was until five years ago."

These ideas may be too pragmatic for the wider Unionist community in its present mood, but there are signs of receptivity in the perennially anxious business community.

"I think people here are ready to think about power sharing," one Northern businesswoman said this week. "Harold McCusker has put his finger on a nerve—at least a Northern nationalist speaks with an Ulster accent, and I think devotion will be the only way to pull the teeth of the Anglo-Irish Agreement."

In a long interview with the Belfast Telegraph this week, Mrs Thatcher made it clear that she will judge the success of the Agreement largely in terms of whether it leads to devolution—the transfer of power from Westminster to Stormont in a manner acceptable to both communities. If Unionists do not like the new intergovernmental conference, she said, "the remedy lies in their own hands. It is to sit down with the SDLP, all of them, and the Alliance, and work out a system of devolved government."

Senior government figures in the province believe devolution stands a chance. They would help if ministers were to retire to the background and not attempt to appeal to the people over the heads of their elected leaders. But, says one, if the Unionists mean to negotiate, they had better do so before the loyalist marches get underway next summer.

"Any reassuring offers that are to be made had better be made pretty quickly once the by-elections are over," he warns. "If anything is to be delivered, it has got to be this side of next summer."

## UK road safety

## Seat belts, drink and statistics

By John Adams

THE ATTACK on drunken driving in 1967 was remarkably successful. The percentage of fatally injured drivers who had blood alcohol levels above the legal limit dropped from 25 to 15 per cent. There was a large reduction in numbers killed on the roads: during what the Department of Transport calls the "drink/drive hours," between 10 pm and 4 am, the numbers killed fell by 31 per cent; outside those hours the fall was 9 per cent.

The success was short-lived. Within three years the percentage of over-the-limit drivers killed was above the pre-1967 level and by 1982 36 per cent of drivers killed were over the limit.

In 1983 the evidential breath testing machine was introduced. The number of roadside tests increased from 207,000 to 245,000, and convictions for drunken driving rose from 75,000 to 98,000—both record levels. There was a marked drop in drunken driving and fatalities on the roads between 10 pm and 4 am fell by 23 per cent. Outside those hours the fall was only 3 per cent.

But there is a curious difference between 1983 and 1967 in the official interpretation of these statistics. In 1967 the reduction in drunken driving was credited with the greatest saving of lives on the road since the Second World War. In 1983 the reduction in the numbers killed was attributed by Department of Transport reports entirely to that year's seat belt law. The decrease in drunken driving was given no credit for saving any lives.

The most recent departmental report on seat belts, in October, estimates that in the period after the law came into effect the number of car drivers killed fell by 18 per cent below the prevailing trend, and the number of front seat passengers by 25 per cent. But it also reports increases above prevailing trends in rear seat passengers killed (up 27 per cent), pedestrians (up 15 per cent) and cyclists (up 40 per cent). The Department insists that the decreases are "due almost entirely to the effect of the (seat belt) law," and that the increases are either an "unexplained mystery" or a "coincidence." None of these estimates makes any allowance

for an alcohol effect. It is widely believed that drunks are less likely than sober drivers to wear seat belts, and that belt wearing rates are lower at night than during the day. Since most of the reduction in fatalities in 1983 occurred during the "drink/drive hours," it seems that the reduction in drunken driving deserves most of the credit.

There is abundant evidence that safety measures can change driver behaviour. But measures which protect drivers from the consequences of bad driving are likely to encourage bad driving. Seat belts also protect motorists from the consequences of bad driving.

No country which has passed a seat belt law has produced convincing evidence that the law has had a beneficial effect. A study comparing countries which passed seat belt laws in the 1970s with those which did not found that the countries without laws fared better.

It is the Department's analysis of injury statistics which leads it to conclude that the law has had a beneficial effect in Britain. The fatality statistics and the injury statistics tell different stories. The British Medical Association, in evidence to the House of Commons Transport Committee, stated: "The existing definitions upon which records are based are misleading. Only one in four casualties classified as seriously injured is, in fact, seriously injured and many of those classified as slightly injured are, in fact, seriously injured. The existing definition of 'seriously injured' covers everything from a broken finger to total paralysis."

If one trusts the accuracy of the fatality figures, rather than those for injuries, gives the fall in drunken driving a reasonable share of credit for the decrease in fatalities in 1983, and considers the evidence relating to other countries, even the department's evidence tilts strongly towards the conclusion that there has been no net life-saving benefit attributable to the seat belt law. There has been only a shift in the burden of risk from the best protected to the most vulnerable road users.

## Dedicated capital

From the Managing Director, IBCA Banking Analysis

Sir,—The Lombard column (December 12) on "The drawbacks of dedicated capital," highlighted an issue which has had little discussion. You argued that financial markets would be better served if banking subsidiaries, engaged in non-banking business, were seen as stand-alone entities, without any assumption that parents would bail them out if necessary.

This certainly makes better sense than the present system with its concept of unlimited moral obligation. It would also confine central banks to performing their role of lender of last resort with one objective only, namely, the protection of depositors in order to avoid system risk. At present, if a trading subsidiary of a bank were to fail, the Bank of England would expect the parent bank to support the subsidiary beyond its legal commitment, and it is conceivable that the provision of such support could cause the health of the parent bank itself to come into question. There would, however, be little purpose in such circumstances in forcing the parent bank into liquidation in order to support its subsidiary. So, the logical conclusion is that the Bank of England itself would, in the end, have to provide support to the subsidiary, very much as it did in the case of Johnson Matthey.

Although the lender-of-last-resort role is a crucial one, it should be exercised sparingly, since, if markets perceive that virtually all financial entities enjoy lender-of-last-resort protection, excesses based on the assumption that there is no credit risk are certain to occur. Robin Monro-Davies, 2 Eldon Street, EC2.

## Trade unions in Germany

From the General Secretary, International Metalworkers' Federation

Sir,—In your reporting so far about the row in West Germany over changing the law which allows benefit to be paid to workers laid off as a result of strike action other than in their workplace there is one word that you have never mentioned. That word is lock-out. From the union point of view the proposed change would allow employers to lock out any number of workers to put pressure on a union that was only calling out a small group of strikers.

This in fact already happens—most of the workers made idle in the 1984 metalworkers' strike were locked out by the employers—but, at least locked-out workers' families do not starve as they have access

## Letters to the Editor

to state benefit. It is this access that conservative forces in West Germany now wish to withdraw. It would mean a very great shift of power in the currently balanced relationship of forces between employers and unions, a balance that has helped keep stable industrial relations in the Federal Republic.

There is also an historic point worth noting. The widespread lock-out used to force small groups of strikers back to work because of the hunger of their idle colleagues down the road was most effectively used in the 1920s to render trade unions weak and feeble. No German trade unionist wishes to return to that state and it is conceivable that the provision of such support could cause the health of the parent bank itself to come into question. There would, however, be little purpose in such circumstances in forcing the parent bank into liquidation in order to support its subsidiary. So, the logical conclusion is that the Bank of England itself would, in the end, have to provide support to the subsidiary, very much as it did in the case of Johnson Matthey.

## Helistop in the City

From Lord Hanson.

Sir,—I fully endorse the views expressed by Mr Graham Langmead (December 13) on the absolute necessity for a replacement for the Trig Lane helistop. An ever-increasing number of companies—our own included—rely on the helistop as a fast, efficient and safe means of executive transport. For overseas buyers or highly paid and hard-pressed executives to be able to visit three or four widely separated locations in the UK, returning to London the same day, is a facility only a helistop can provide and avoids unproductive and wasted hours on the roads or in trains and hotels.

If the City of London wishes to retain its envied position and reputation as the world centre of banking and commerce and if the nation's best interests and economic progress are to be served, provision must be made for helicopters to operate to and from the City.

Hanson Trust, 180, Brompton Rd, SW3

## Reading the papers

From Sir Richard Storey.

Sir,—Mr Locks (December 10) is still coy about the mean-

ing of the word "read" in the context of those people who in 1984 allegedly "read" weekly free newspapers. He tells us only that "it followed the established pattern set by the ITC NARS National Readership Survey." I have, therefore, found out the definition for myself and, in this context, "reads" could mean having "read" or looked at, it does not matter where, any copy, within the last week. No length of time at all was then recorded although, subsequently, a two-minute research by JICNARS.

That unknown duration of reading or looking at a free newspaper contrasts, I believe, with the period for paid-for weekly newspapers where 64 per cent of those who "read" one of them said that they spent longer than 15 mins doing so.

## Social security reform

From Mr D. Byrne

Sir,—Your Leader on the social security situation (December 17) points out that two of the key aims of the reform package are the targeting of help on the most disadvantaged families and the "elimination of the poverty trap." You comment that "the attacks on family deprivation and on the poverty trap are entirely welcome."

In fact the changes proposed in the White Paper will institutionalise the poverty trap rather than eliminate it: on the basis of the illustrative assumptions used in the White Paper itself low paid families in receipt of family credit and housing benefit will be subject to an overall marginal tax rate of 36.3p in the £. Thus, they will keep just 54p of a £1 increase in earnings. Moreover, twice as many poor families will be subject to these very high marginal tax rates than is the case at present.

This is an unavoidable consequence of means-testing, which is of central importance in Mr Fowler's blueprint for social security. The effect also is to blunt the attack on family deprivation. The side effects of means-testing—complexity, stigma, and high marginal tax rates—combine to produce a highly inefficient method of delivering help to those most in need. Family income supple-

ment only reaches half of the families for whom it is intended. Take-up of family credit may be lower still because payment through the employer is likely to discourage claimants. At the same time such a method of payment will amount to a direct wage subsidy and so encourage downward pressure on already low wages resulting possibly in greater hardship. The compensation of net income may change (with more coming in the form of benefits financed by the taxpayer and less in the form of wages) but the living standards of poor families may not be enhanced at all.

In the long term, then, family credit is likely to trap families in the poverty it is supposed to alleviate. The effect will be compounded by the reduction in the real value of child benefit.

Dominic Byrne, 9 Lower Berkeley St, W1

## Swap trading books

From the Executive Director, Citicorp Investment Bank

Sir,—I read with great interest the December 16 article by Maggie Urry, entitled "Pru-Bache opens up a swap warehouse." The article begins her fourth paragraph with the phrase "The idea for the swap warehouse came from Prudential Bache Securities..." While it was perhaps unclear, I trust there was no intent to imply that the "warehouse" concept, or indeed the term "swap warehouse" was in any way original to Mr Brown or anyone else at Pru-Bache. Citicorp opened up its London dollar swap trading book in January 1983, and coined the term "warehouse" to provide quick and comfortable recognition among non-swap professionals in Citicorp's Investment Bank. The term has since become market jargon for a positioning capability in swaps.

We wish Mr Brown and all of our ex-colleagues at Pru-Bache the best of luck; we welcome any entrant who contributes to the liquidity of the market.

M. D. Blundell, PO Box 242, 335 Strand, WC2.

## Striking figures

From Mr J. Hartnett.

Sir,—Trevor Bailey (Weekend Post, December 15) comments that he would be watching—his words—by far the best striker in League football, Ian Rush. In the event he would, in my view, have spent his time more rewardingly at Upton Park watching McAvonnie scoring his 19th goal of the season as against Rush's paltry 10. Jack Hartnett, 110 Blackheath Road, SE10.

Friday December 20 1985

## ATTACK ON BLACK ECONOMY EXTENDED AFTER 40% INCREASE IN TAX RECEIPTS

## India launches 5-year fiscal plan

BY JOHN ELLIOTT IN NEW DELHI

INDIA yesterday launched its first long-term fiscal policy, aimed at boosting tax receipts and increasing industrial confidence as part of overall economic and administrative reforms introduced during the past year by Mr Rajiv Gandhi, the Prime Minister, who won a landslide general election victory last December.

The policy expands an attack on the black economy, coupled with reduced levels of taxation introduced in the country's budget last March, which together have boosted the Government's personal tax receipts by 40 per cent this year.

Overall tax income, including corporation tax, has risen by 25 per cent, according to government statistics contained in yesterday's policy document.

The policy, which is to last for

five years, was launched by Mr Vishwanath Pratap Singh, Finance Minister, to give a "definite direction and coherence to the sequence of annual budgets." It also aims gradually to switch management of the economy away from "case-by-case" administration of physical controls to "rule-based fiscal and financial policies."

That will include a gradual move away from indirect taxation on commodities and services, which at present accounts for 81 per cent of the Rs260bn (\$21.8bn) total tax revenue collected annually at central and regional levels.

The policy document's provisions for the next five years include: maintaining personal tax rates at their present level for five years; rewriting and simplifying direct tax laws; introducing a new national de-

posit scheme for personal savers; reforming corporation tax with a scheme allowing 20 per cent of company profits to be used tax-free for industrial investment; liberalising capital gains tax; introducing a modified form of value-added tax; and rationalising customs duties.

The sharp increases in tax receipts, which are far higher than expected, are reinforcing the Government's determination to continue with its tough attack on the black economy. That policy is being severely criticised this week by leading industrialists after raids on Kirloskar and Bajaj families of Poona, near Bombay, and the arrest last week of Mr S. L. Kirloskar, the respected 62-year-old pioneer of India's engineering industry.

It has been estimated that India's

black economy deprives the Government of 40 per cent of its potential tax income. It has become a prime target for Mr Singh.

The increase of 40 per cent in personal taxation occurred between April and October and is expected by government economists to level off to about 30 per cent by the end of the financial year, next March, compared with about 10 per cent in previous years. Last year's personal taxation receipts totalled Rs18bn.

Anti-smuggling measures linked to the drive against the black economy have led to the seizure of Rs1.5bn of contraband goods in the first eight months of this year compared with Rs1.1bn in the whole of last year. Seizures of gold have more than tripled.

## FitzGerald gloomy on prospects for cuts in taxes

By Hugh Carnegie in Dublin

IRISH hopes that next month's budget might ease the relentless austerity of the past three years have been dashed by a gloomy Christmas pronouncement on the economy by Dr Garret FitzGerald, the Irish Prime Minister.

Addressing the last session of parliament before the Christmas recess, Dr FitzGerald said a heavy shortfall in tax revenue this year left the Government with little room for manoeuvre on tax cuts and public sector pay in the 1986 budget, due on January 29.

Tax income was 2.5 per cent, or about £110m (\$122m), below target, mainly because value-added tax (VAT) and excise concessions on electrical goods, alcohol and betting introduced earlier this year had not proved self-financing, as had been hoped.

Dr FitzGerald said spending overruns of £120m on public sector pay and unemployment benefits had been balanced by cuts in public spending. The current budget deficit would therefore be about on target.

But there is no disguising the fact that the opening budgetary situation for 1986 is more difficult than might have been expected, the Prime Minister said.

His unseasonal reminder that Ireland's economic woes are still a long way from resolution is unlikely to improve the Fine Gael-Labour coalition's low opinion-poll standings of up to 15 points behind the opposition Fianna Fáil party.

Dr FitzGerald's message was that his Government was determined to see out its full five-year term of office, due to expire in November 1987, and it would honour its pledge to put the public finances in order, however tough the required measures might be.

With the national debt approaching £200m, half of it in foreign currency, extra borrowing would be non-sensical, he said. Indiscriminate stimulation of the economy would be self-defeating. The answer was to control spending and foster sound economic growth.

The Prime Minister's "sober report", as he called it, coincided with 1985 spending estimates published by Mr Alan Dukes, the Finance Minister, which reflected the continued difficulties facing the Government.

Current spending is set to rise next year to £25.7m from £25.5m this year, an increase broadly parallel with the estimated 1986 average inflation rate of 4 per cent.

That figure is already £140m above targets set in a 1984 national plan and does not include provision for the current public-sector pay round. Capital spending of £1.7bn is projected to show a cut in real terms of about 4 per cent.

Irish exports will total around £110m this year, a 12 per cent rise in value over 1984, according to the Irish Export Board. Volume increased by 7 per cent.

The Board predicted a similar trend for 1986, when exports were projected to rise to £111.3m.

The 1985 figure compared with an 18 per cent growth in export volume in 1984 and reflected a strong recovery in world trade growth. Non-food manufactured goods accounted for some 86 per cent of Irish exports, despite a slowdown in growth in the electronics sector, where US companies with offshoots in Ireland were hit by the recession in the semiconductor business.

Britain continued to be Ireland's biggest market.

Recovery 'to continue'

Continued from Page 1

many next year, although Mr Henderson indicated that it would have liked a further cautious relaxation.

The Outlook points out that the Western economies have now experienced the longest period of distribution since the Second World War, which it says can be attributed both to structural improvements in their economies and the continuing falls in world commodity prices.

With both oil and non-oil commodity prices expected to remain weak and no supply constraints in labour markets, there appeared to be scope for faster growth than at present envisaged.

The OECD warns, however, of the dangers that would be posed by a collapse in oil prices or an uncontrolled slide in the dollar's value.

## THE LEX COLUMN

## A bill of rights, and wrongs

The Financial Services Bill is a most impressive piece of legislative architecture. But the superstructure has been visible for so long that yesterday's toppling-out ceremony is unlikely to have persuaded its critics that the proposed mixture of self-regulation and statutory authority will ensure a proper balance between investor protection and market freedom.

The bill, and the SIB regulation document which accompanies it, are nothing if not comprehensive. In the area of retail investment advice, where the need for proper investor protection is most urgent, the bill and the SIB lay down enough rules about what is allowed and what is not. Cold-calls and Caribbean commodity funds should now know where they stand.

Not surprisingly, the regulators become less sure-footed as they approach the City tower-blocks. In order, for example, to reduce the reporting burdens on financial conglomerates, the SIB proposes the notion of a lead regulator, being the SRO with direct responsibility for the largest part of a conglomerate's activities. But it is not clear that the delegation to one SRO of responsibility for an entire group's capital adequacy will solve more problems than it creates. The idea will only work if all the SROs are operating in harmony and if a clear distinction is made between the responsibilities of the lead regulator and of the other relevant SROs.

If that distinction will be no easier, as at present, capital adequacy is loosely defined. The regulators are anxious to ensure that authorised firms have single liquidity - and are working on a host of complicated yardsticks for measuring it - but have not yet polished much by way of formulae.

VAT is at 23 per cent. Income tax is divided into 35, 40 and 60 per cent bands, with a married person paying 35 per cent on earnings up to £25,000, 40 per cent up to £24,999 and 60 per cent over that.

Dr FitzGerald's message was that his Government was determined to see out its full five-year term of office, due to expire in November 1987, and it would honour its pledge to put the public finances in order, however tough the required measures might be.

With the national debt approaching £200m, half of it in foreign currency, extra borrowing would be non-sensical, he said. Indiscriminate stimulation of the economy would be self-defeating. The answer was to control spending and foster sound economic growth.

The Prime Minister's "sober report", as he called it, coincided with 1985 spending estimates published by Mr Alan Dukes, the Finance Minister, which reflected the continued difficulties facing the Government.

Current spending is set to rise next year to £25.7m from £25.5m this year, an increase broadly parallel with the estimated 1986 average inflation rate of 4 per cent.

That figure is already £140m above targets set in a 1984 national plan and does not include provision for the current public-sector pay round. Capital spending of £1.7bn is projected to show a cut in real terms of about 4 per cent.

Irish exports will total around £110m this year, a 12 per cent rise in value over 1984, according to the Irish Export Board. Volume increased by 7 per cent.

The Board predicted a similar trend for 1986, when exports were projected to rise to £111.3m.

The 1985 figure compared with an 18 per cent growth in export volume in 1984 and reflected a strong recovery in world trade growth. Non-food manufactured goods accounted for some 86 per cent of Irish exports, despite a slowdown in growth in the electronics sector, where US companies with offshoots in Ireland were hit by the recession in the semiconductor business.

Britain continued to be Ireland's biggest market.

Recovery 'to continue'

many next year, although Mr Henderson indicated that it would have liked a further cautious relaxation.

The Outlook points out that the Western economies have now experienced the longest period of distribution since the Second World War, which it says can be attributed both to structural improvements in their economies and the continuing falls in world commodity prices.

With both oil and non-oil commodity prices expected to remain weak and no supply constraints in labour markets, there appeared to be scope for faster growth than at present envisaged.

The OECD warns, however, of the dangers that would be posed by a collapse in oil prices or an uncontrolled slide in the dollar's value.

ment for the purposes of the bill is an almost impossible task and there will undoubtedly be some ambiguity about what constitutes, for example, a professional investor. For all its weak spots, the bill is a remarkable document. But it will not work effectively unless the SIB and the SROs establish a modus vivendi - and that means all regulatory bodies being properly staffed. The civil servants have done their bit; it is up to the practitioners to ensure that the regulatory structure lives up to the hopes of its architects.

## GrandMet

Though takeovers abound in the UK drinks market, GrandMet is almost bound to remain aloof. A competitor of Distillers and trading partner of Eilers, it would surely be impossible for GrandMet to intervene in any of the action without being put into bank on the part of competitive grounds. And the same size of GrandMet - book worth £2m market capitalisation £2.7m - would still very recently have been sufficient protection on its own against collectors of international brand names.

In default of such excitements, the market has tended to value GrandMet by more traditional yardsticks. Short on growth and always running on a high level of debt, GrandMet has lost its previous rating. Obligated to get through this year under the £2m handicap of valuing US domestic profits, and losing its dominance of the London casino market, earnings growth was not expected. To produce any improvement at all, even the 4 per cent step up to £247.5m pre-tax, is thus a reasonable achievement; yesterday it was enough of a surprise to be worth 25p on the share price.

The losses may be worse than expected, but they are still within BT's range of expectations; if more on the top than the bottom. BT is hardly aiming to buy Mital for its earnings, in the short term at least. What it wants in Mital's customer base in North America, which unfortunately is being eroded by giants such as AT&T and IBM, especially at the bottom end of the PC market.

The £247.5m will go directly into Mital's balance sheet; enough to pay off most of the company's debts and leave more headroom for investment. Unless something goes disastrously wrong in Mital's markets, BT should not need to pump any more money in for some years. So BT shareholders will hardly notice the effect on their reserves or profits if the deal goes through. But they might question the wisdom of BT branching out into foreign manufacturing - and facing competition from old hands like IBM - when there are still international contracts and companies to be picked up in the field BT knows best: network operation.

## Brussels agrees \$1.6bn steel subsidies

BY PAUL CHEESERIGHT IN BRUSSELS

THE EUROPEAN Commission has authorised the payment of subsidies totalling Ecu 1.64bn (\$1.6bn) to steelmakers in the UK, France and West Germany in one of its last acts under the expiring EEC plan to restructure the steel industry.

Under the EEC plan, which has seen more than Ecu 35bn pumped into the Ecu steel industry, the commission has been approving subsidies linked to capacity cutbacks and a return to financial health at individual companies.

But all subsidies cleared for payment have to be handed over by the end of the year when a new and more rigorous system of subsidy control comes into operation.

The authorisations mean that:

● British Steel Corporation can receive subsidies worth Ecu 880m; ● Sidor/Usinor of France can receive subsidies worth Ecu 520m; ● Thyssen, Krupp, Klockner and Eisenwerke Maximilianshütte of West Germany can receive subsidies of Ecu 350m between them.

No more payments will be authorised under the expiring code, the Commission explained yesterday. The last releases of funds came within the framework of aid and restructuring packages that the Commission approved conditionally in 1983. They do not represent new subsidy plans.

They follow an authorisation granted to the Italian Government to hand over L3,342bn (\$1,95bn) to

Finsider in exchange for capacity cuts of 800,000 tons.

That rash of authorisations effectively concludes a three-year plan, administered by the Commission under the terms of the European Coal and Steel Treaty, to use subsidies to reduce capacity by 30m-35m tonnes from the 1980 maximum capacity of about 170m tonnes.

By the end of the year, total closures will have reached 28.6m tonnes and a further 2.5m tonnes will be taken out over the next 12 months. In the first half of this decade, nearly 40 per cent of total jobs (about 250,000) have been lost.

Companies are now preparing for a system of support which will ensure subsidies only for research

and development, environmental protection and the closure of plants where the whole company leaves the sector.

At the same time, liberalisation of the production quota and a minimum price system is starting. Market controls have been the counter-part of the restructuring aid system.

Although the Commission expects steelmakers in the Community to be financially sound from next year, average capacity usage rates are still hovering around 70 per cent.

With demand levelled off, it is calculated that the industry as a whole needs to shed a further 20m tonnes of capacity to bring production and consumption into balance by 1990.

## Westland rescue package due today

Continued from Page 1

Under the rescue plan, Sikorsky's parent, United Technologies, has guaranteed to provide not less than 1m man hours work over a three-year period starting "as soon as practicable but not later than the first quarter 1987." The workload will be broken down into 650,000 engineering man-hours and around 350,000 manufacturing man-hours.

Westland has also secured a licence to develop, market and manufacture Sikorsky's medium-weight Black Hawk for sale "in a significant number of territories throughout the world." Sir John said that reports that the rescue would turn Westland into a "metal-bashing" subsidiary of Sikorsky were "a complete reversal of the truth."

Peter Riddell, Political Editor, in London writes: Mr Heseltine yesterday agreed to lower the political temperature between him and Mr Leon Brittan, the Trade and Industry Secretary, over the unusually public row about the future of Westland.

Both Mrs Thatcher and Lord Whitelaw, the Leader of the Lords, are said to have intervened during yesterday's Cabinet meeting to ward the Defence Secretary of the need to cool the argument and settle the affair less publicly. This followed a private warning to the Prime Minister from senior ministers of the damage that the string of these differences was doing to the Government.

Later in the Commons, Mrs Thatcher backed the stand taken by Mr Brittan on Monday that Westland's future must be a matter for the commercial judgment of its directors and shareholders. In an apparent rebuke to Mr Heseltine, she repeatedly said that that position was reaffirmed by the Cabinet and was the position of the whole Government.

## Bosch finds alternative to Siemens as buyer of Pierburg

BY JOHN DAVIES IN FRANKFURT

ROBERT BOSCH, the West German motor components group, appears to have won a decisive round in its battle to prevent Siemens, the electrical concern, from taking control of Pierburg, which makes carburetors for cars.

Bosch, which has been casting around for an alternative to Siemens, has come up with Rheintal, the arms manufacturer.

Rheintal has agreed to buy a majority stake in Pierburg as a diversification move. But it is not yet clear how much of Pierburg it will buy, as that will depend on whether another partner is found.

Pierburg, with 5,800 employees and group sales revenue of DM

600m (\$238m) a year, faces heavy investment spending in the next few years to keep abreast of trends in the motor vehicle industry.

Pierburg family members recently agreed in principle to sell their 80 per cent stake to Siemens, which sees the company as a way of building up its interests in automobile electronics, but the Federal Cartel Office indicated that it would approve the deal only if Bosch gave up its 20 per cent stake in Pierburg.

Far from bowing out, Bosch then announced that it would exercise its long-standing option on the rest of Pierburg to pass on to other partners. Although Bosch co-operates

with Siemens in some lines of business, it sees no reason to make way for rival ambitions in a field central to its own activities.

Bosch has already made clear that it intends to limit its interest in Pierburg to its existing 20 per cent holding. Bosch said yesterday that it had not yet been decided whether Rheintal would take over the remaining 80 per cent or whether a third partner would be brought in with a 20 per cent holding.

According to Bosch, the cartel office has given the impression that it would have no objection if Rheintal took over a majority of Pierburg.

## UK plans to protect investors

Continued from Page 1

existence only a short time," said Mr Brittan. "I do not think we are yet in a position to assess and come to a conclusion as to its efficacy."

"I am not persuaded that even if we came to the conclusion that there are deficiencies in this Bill would be the most appropriate place to address them. We will not hesitate to take further legislative action if necessary."

The Government also published a consultative document on the auditors' role in the financial services sector which drew criticism from the accountancy profession. Mr Michael Howard, Minister for Corporate and Consumer Affairs, said: "The proper regulation of the financial services sector, and effective action against fraud, involves close co-operation between management, the professions, supervisory bodies and government."

He said that the Government's main concern in the consultative document was to facilitate communications between auditors and supervisors.

The primary responsibility for the prevention and detection of fraud lies with the management. However, the auditors reporting re-

sponsibilities give him a major if secondary role." He added that the fight against fraud would be much more effective if auditors interpreted their reporting responsibilities in a more positive way.

Mr Matthew Patient, a partner at leading UK accountants Deloitte Haskins & Sells, expressed disappointment that the consultative paper on the auditor's role in the financial services sector included no requirement for the appointment of non-executive directors.

"We welcome the extension of the auditor's responsibility for detecting fraud," he said, "but a requirement to appoint non-executive directors, particularly for large institutions, would have assisted auditors in this enhanced role."

The Government's suggestion that auditors should assume a blanket obligation to keep supervisors informed of all matters of which they needed to be aware was attacked by the English Institute of Chartered Accountants last night as "impossibly widely drawn."

Mr Brian Singleton-Green, secretary of the institute's parliamentary and law committee said:

"It would put the auditor in an almost impossible position."

He argued that any minor omission would render the auditor liable to legal action should a company subsequently fail. "We are very concerned about this. It needs to be re-worded."

Elsewhere in London, Sir Nicholas Goodison, chairman of the Stock Exchange, said that "on initial examination, the regulatory proposals strike an acceptable balance between statutory control and self regulation."

At the Lloyd's insurance market last night, officials said: "We agree with the reasons given recently by the Secretary of State for the exemption of Lloyd's: the Bill is concerned with the regulation of the investment industry and not with the regulation of the business of insurance at Lloyd's."

"The principle of self-regulation within a statutory framework already applies to Lloyd's through the Lloyd's Act of 1982." They added that "nothing has been suggested that would suggest the Act is inadequate."

## Austrian bank move row

SENIOR Austrian bankers yesterday strongly criticised government plans to amend the banking law, arguing that initial proposals from the Finance Ministry were "unrealistic", writes Patrick Blum in Vienna.

Dr Karl Pale, chairman of Girozentrale, Austria's second largest bank, and Dr Hans Hammer, chairman of the Erste Österreichische Spar-Kasse, a leading savings bank, both attacked the proposals which would compel Austrian banks to raise their capital ratios to 4 per cent of balance sheet totals within five years.

The Finance Ministry wants to introduce the reforms to bring the capital ratios of Austrian banks, which are among the lowest in the Organisation for Economic Co-operation and Development (OECD) group of countries, in line with international banks.

Dr Pale, whose bank is both a clearing institution for the savings banks and a commercial bank in its own rights, said: "We are in favour of a realistic and feasible reform, but it does not seem possible to achieve (such ratios) in so short a period."

Dr Pale and Dr Hammer argue that the period should be extended to 10 years.

CIVILIAN leadership in Brazil after 21 years of soldier presidents has brought few dramatic changes to potentially one of the world's great countries.

President Jose Sarney is trying hard in not the easiest of circumstances. Benign and well-meaning he is generally recognised as immeasurably better than his predecessor, General Joao Figueiredo. Yet, outside military circles, which Mr Sarney served until 18 months ago as leader of the Government's Congressional supporters, there is a feeling that he has not proved very effective.

One excuse for the lack of courage the new Government has shown is that it is, by prior declaration, a transitional administration. Its raison d'être always was to bridge the gap between the years of arbitrary authoritarianism and the promised era of full participatory democracy.

How long the transition should be—two years, four or six—is much debated, though the consensus appears to have plumped for four. The danger with a four-year term is that it will simply stretch out the pre-

election politicking, condemning Brazilians to a saturation bombardment of elections and election campaigns stretching all the way from 1982 to 1988.

In such circumstances the scope for inaction, the postponement of difficult decisions and extravagance with public moneys, for electoral gain, is frighteningly evident.

The other explanation President Sarney gives in his own defence is the illness and death of president-elect Tancredino Neves, in May, before he was able to take office.

In fact, it is a tribute to the underlying strength and resilience of the country that it was able to carry off the transition from the military so smoothly, in the face of a crisis which would have sorely tested a more excitable, less self-assured Latin nation.

Mr Sarney, as vice-president of the Democratic Alliance coalition slate, formally took up the reins: tentatively at first, and then with increasing confidence. But what has bedevilled his attempts so far to become master in his own house has been the hitch-hitch of mini-

sters chosen personally by Tancredino Neves.

The departure, under protest, of finance minister Francisco Dornelles and his replacement by Dilson Funaro has helped to create greater ideological cohesion in the cabinet. But the full-scale reshuffle Mr Sarney has been threatening for some time, to create a Government in his own mildly liberal likeness, has been put off until February.

#### Significance

Looming ahead, dwarfing all other considerations for the Government are the November 1986 congressional and gubernatorial elections. What gives them considerable added significance is that the new Congress to be elected will transform itself into a Constituent Assembly charged with redressing the damage wrought to the national constitution by the military.

In practice, this means redressing the traditional balance between the executive—greatly strengthened under the generals—and the legislature, as well as that between the Federal Government and the states.

Brazil is, after all, a federation in which sharp regional variations exist.

Above all, for most people, the chief task of the Constituent Assembly will be to restore direct elections for the presidency and set a date for the poll to choose Sarney's successor.

Even though the vote is still probably three years away, the front runners, declared and undeclared, are already gathering at the starting gate. They are a familiar crowd of faces: Aureliano Chaves, vice-president to General Figueiredo, Leonel Brizola, the irrepressible Socialist Governor from Rio de Janeiro, Ulysses Guimarães, the veteran political leader who heads the Brazilian Democratic Movement Party, the PMDB, and Franco Montoro, another long-standing campaigner.

For those concerned about the political maturation of Brazil and the development of a modern democratic system, recent municipal elections returned a mixed message.

On the one hand, old populists from the 1950s like former President Janio Quadros and Mr Brizola himself won convincing

electoral victories in the big cities of the south and south-east. On the other, the small, grassroots Workers' Party, the only party which has emerged from the political basement rather than being artificially created from on high, did surprisingly well in regions where the sway of local "colonels" had previously always ruled.

What these results showed is that the national banking after strong, charismatic leadership still has deep roots. They were also an indictment in many areas of machine politics with all its unsavoury associations.

For the PMDB and its efforts to consolidate itself as the natural party of government after decades in the wilderness, the lesson should be clear. Brazilians do not just want the empty rhetoric of the past, full of sound and fury. They want competent, clean administration.

Corruption, both on the grand scale and at the petty level, is a real problem. And not too much is being done about it. Not one of the well-known culprits from the upper reaches of former governments has yet had charges brought against him. What is particularly depre-

sing is that Brazilians are among the most well-meaning and tolerant of people—cheerful, willing and long suffering, who put up with abuse and injustice with little complaint.

#### Harnessed

It is impressive the way the national qualities of adaptability and pragmatism can be harnessed behind an industrial recovery such as is now taking place. From the depths of recession a year and a-half ago, first exports and now domestic demand have recovered.

Growth is associated with hope and opportunity for the young Brazilian population. This year gross domestic product should expand by over 7 per cent, the best result in a decade.

Shrugging off the shackles of its creditors and their watchdog, the International Monetary Fund, Brazil is surging ahead again. Economists will argue over how soundly based the recovery may be. The risks are great, senior officials admit, but politically and socially (for it has a strong conscience) the Sarney Government feels it had

no choice but to chart its own way forward out of recession. The challenge of providing basic necessities of adequate housing, food, medical care and education for the 40 per cent of the population—34m people—who exist below the official poverty line is a daunting one.

Under the military, Brazil laid the foundations of its sophisticated industrial and physical infrastructure. But the price was a worsening of inequalities and a widening of the income gap. Without access to good public education or a welfare safety net, the economic gains of the 1960s and 1970s shown in national statistics were meaningless for many.

But nature has been bountiful in its gifts to Brazil and Brazilians have lived for centuries off its munificence. Agriculture is today making great strides in new crops such as soya and oranges, while expanding fast into new frontier zones in the centre-west and north-west of the country.

Mining has over the past year or two been the fastest growing sector, with major multinational concerns staking their claim to part of the action. Most surprising of all for those who knew the country even five years ago is the way in which domestic oil and gas production has taken off. Brazil is already 60 per cent self-sufficient in oil products and, with the further development of the deep water production technology in which it is already a world leader, could meet all its own needs by the end of the decade.

At times, though, the country seems to advance, despite the weakness of its public institutions and the suffocating influence of its bureaucracy. President Sarney has been plugging away for months about the need for a grand "social pact" on the lines of post-Franco Spain, to shore up his own fragile political base and create national concord on the directions the country should be taking. A recent opinion poll showed, however, that 95 per cent of the population had never heard of the proposal.

Will Brazil ever be the great power it aspires to be? Its society is perhaps too unruly and disorganised to make such hopes sound convincing. The prospects will be greatly enhanced, however, if democracy can be consolidated.

## ITAÚ. AN IMPORTANT NAME IN WORLD BANKING.

Banco Itaú is one of the largest banks in Brazil. It has 1232 branches and service posts throughout the country, covering 600 towns and providing export and import companies with the fullest support. Altogether 50 Brazilian cities have their Itaú branches interconnected electronically. Its 83,481 employees have been trained to give more than eight million customers the quickest and most efficient service.

Working with Itaú means working with a very powerful financial group, which is comprised of a commercial bank, an investment bank, a finance company, a leasing firm, investment fund management, an insurance company and many others, including a travel agency. But Itaú's services are not confined only to Brazil. Foreign exchange departments in 17 Brazilian cities, with a specialized team of 600 employees, provide complete coverage for foreign trade operations. And besides this, there are the Bank's Branches in New York, Buenos Aires and the Cayman Islands and its Representative Office in London, all of which are at the immediate disposal of Itaú's clients, in addition to 1500 correspondent banks in all parts of the world.

# Growth rate gains priority

Economy  
ANDREW WHITLEY

THIS YEAR the Brazilian economy will achieve a rate of growth unseen since the early 1970s, delighting policy makers and the public alike.

Fuelled by a strong upswing in consumer demand, gross domestic product should rise by more than 7 per cent, with agriculture, mining and oil, and retailing as the leading sectors.

At first glance, the external position also looks comfortable. A visible trade surplus of US\$12.5bn is likely, down marginally on 1984 but still more than adequate to meet debt interest payments of about \$10.5bn. The current account should end up with a small deficit but inflows of funds from multilateral lenders such as the World Bank will cover the gap.

The Sarney Government has even convinced itself, and is successfully doing the same with the general public, that an inflation rate equal to that of last year—224 per cent—will be a minor triumph given the dislocation inevitable in the transition from a military to a civilian government earlier this year.

The only disquieting feature of the current scene, from an official point of view, is the inexorably rising public sector debt servicing requirement. In the 12 months to September the debt in the hands of the public swelled by 44 per cent in real terms.

A colourful Brazilian expression in common usage is "empurrar com a barriga", literally "to push with one's stomach," or more accurately, "to put off dealing with a problem." It sums up neatly how the new economic team headed by Mr Dilsen Fumero, the finance minister, has chosen to deal with the foreign debt issue.

A close confidante of President Jose Sarney, the serious-minded finance minister has made it absolutely clear that the overriding priority of this administration is to maintain the growth rate in a target range of five to six per cent over the coming years, creating more jobs and redressing some of the inequities exacerbated by the deep mid-1981 to mid-1984 recession.

Where this goal conflicts with the need to service the country's \$104bn foreign debt, it is the latter which will have to give. And if, in order to restructure debt principal repayments over a longer time span, the prerequisite is a firmer and faster adjustment of the public sector accounts than Mr Fumero feels the economy can stand, then that too becomes dispensable.

Last month, after an apparently unsuccessful attempt to bridge the wide gap between the International Monetary Fund and the Brazilian Government, Mr Fumero announced

that Brazil would no longer seek a new formal agreement with the IMF to replace the three-year accord suspended by the IMF in February. At a stroke, the shadow of the IMF's tutelage—a supervision for which it is hard, in retrospect, to claim any significant achievements—was lifted, and the ball was firmly back in the court of the bank creditors. As debt interest has been paid promptly throughout 1984 and 1985, and the country's creditworthiness looks likely to remain good in the short term, the banks will come under pressure to go along with Brazil's plan.

These entail a one or two-year roll-over of maturing principal and the maintenance of the all-important short-term

rates and continuing demand, rates, to be "talked down" from their previously astronomic levels, thus reducing a substantial chunk of the public sector deficit.

Mass dismissals from the state payrolls are regarded as politically out of the question. Instead the attack on government expenditure has concentrated on waste and the cutting of non-priority development projects.

All this is taking place within the context of a planned reorientation of the more modest resources available to the Government away from productive enterprise and towards the long neglected social sector.

For the first time in years the planning ministry is actually planning, rather than indulging in short-term crisis management as it did under its former chief, Mr Antonio Delfino Netto. A four-year national development plan, Brazil's fourth, has been drafted, outlining expenditure priorities in areas such as public sanitation, clinics, housing and justice, though it is seriously weakened by not having any concrete figures attached to it.

To be fair, considerable sums are being allotted by the planning ministry headed by Leonel Brizola, a progressive-minded economist, to programmes designed to meet immediate social needs, a subsidised basic foodstuffs programme is in place and the Government recently promised a free milk and medicines plan for the most needy, to take effect from next year.

What sceptics wonder is whether the authorities have the freedom of manoeuvre to meet the needs of the exigencies of the debt servicing requirement. As two thirds of the medium- and long-term foreign debt is the responsibility of the Government, and the interest bill of the state companies, also heavily weighted towards external as opposed to internal debt, this brings the debate squarely back to the controversial question of "new money" loans from foreign creditors.

Brazil is continuing to transfer abroad an annual sum equivalent to between 4 and 5 per cent of its gross domestic product, a flow of vital blood money officials feel should be staunch if they are to be able to undertake the kind of programmes they would like to tackle at home.

On this issue the creditor banks have, so far, been adamant. Having used the current respite in lending to claw back their exposure to the most risky, and hence least creditworthy, countries they are in little mood to reverse the trend so soon.

But if they do not come forward, as part of such proposals as the "Baker plan," the hand of the growing number of militants in Brazil, urging even less palatable actions like interest capitalisation or a "cap" on transfers abroad will only strengthen.

withdraw from the political stage this year, while the Brizola phenomenon shows no signs of dying out in terms of its popular appeal.

Now 63, the Rio de Janeiro governor is undoubtedly the most powerful challenger for the presidency from the left. His political machine may be weak, and his electoral base largely confined to his home state of Rio Grande do Sul and his adopted state of Rio de Janeiro, but his charismatic personality has other Brazilian politicians quaking.

When the present coalition Government came to power in March 1984, Brizola kept himself aloof, refusing to be drawn into the new ruling establishment. Keeping his powder dry, he has consistently argued in favour of immediate, fresh presidential elections based on a direct poll rather than the "illegitimate" indirect elections held by the military.

To his ardent admirers, the Rio governor is a charming, inspirational leader, but to his opponents—and there are many of them—he is a dictator, a "Caudillo" of the traditional Latin style, carried away by empty oratory and vague sentiment.

For Mr Brizola—inventor of an ideology known as "Brazillian Socialism"—the visit of the French Socialist President was a cause for considerable pride. Double the joy, then, that he could take the visitor to see one of his dearest offspring, part of a network of "Integrated centres of Popular Education" or, as the smart new schools were quickly dubbed—"Brizolinas."

Governor Brizola is the enfant terrible of Brazil, a populist leader from the 1930s and early 1960s who was forced to flee the country after the 1964 military coup and subsequently spent many years in exile.

On his return, he won a sensational victory in the 1982 elections held by the military to capture the state governorship of Rio de Janeiro, a victory which was the acid test for the military's stated determination to allow the results of free elections to stand.

Summing up the reaction of the right to the return of the former fire-brand, General Euclides Figueiredo, brother of the then President, commented, "Brizola is a toad we shall have to swallow—to spit out at the right moment."

Instead, it was General Figueiredo and the rest of the military who were forced to

Ferno Bracher, Central Bank Governor

## Governor in the hot seat

TRAINED as a lawyer in the 1950s, Brazil's Central Bank Governor Ferno Bracher exercised the profession for only two years before taking a job in the foreign exchange department of a small bank in the north-eastern state of Bahia.

Some 25 years later, Mr Bracher is in a position to assert a long-held professional opinion that the best way for a Third World country to attract creditors is to build up its foreign reserves.

When, in early 1985, dips in Brazilian export revenues caused alarm about the vital year-end trade surplus, Mr Bracher, who is 50, then a prominent private banker, advocated the raising of new compulsory foreign loans to avoid depleting the reserves.

Since he was called into the Government in August to deal with foreign bank creditors he has been circumspect on one of their toughest subjects.

On the key question of whether Brazil would, or should, reach an agreement with the International Monetary Fund, the Central Bank Governor has also modified his opinion since taking office. In August it was "just a matter of time" before an accord was reached. Now he is not so sure.

Like his colleague, Mr Dilsen Fumero, the finance minister, Mr Bracher is intrigued by recent US efforts to encourage a "cap" on foreign debt. He admits that a good solution would be for the World Bank to take over the IMF's policing functions and for Brazil's internal accounts to be left alone.

Very much a nationalist when it comes to dealing with foreign bankers, he thinks that checking periodically on the country's trade surplus and reserves is all the creditors should concern themselves with. In his previous post as director of the National Institute of Monetary and Credit Policy, Mr Bracher was noted for the tough line he took on the efforts of foreign banks to expand their share of the local market.

RICHARD FOSTER

# Creditors dealt with more confidently

Debt Question  
RICHARD FOSTER

SOME US\$45m in loans to three Brazilian banks slipped out of the hands of private foreign creditors, when the three banks failed, and Brazil said it had no obligation to honour their external borrowings.

"The banks which made these loans had the option to lend directly to the national treasury (with Government guarantees) or to the private banks with higher spreads. They made the choice to assume the risk," said Mr Ferno Bracher, Brazil's Central Bank governor, and the man responsible for administering the country's foreign debt of over US\$100bn, the highest in the developing world.

For a country which owes close to US\$70bn to private foreign banks and has had to reschedule all principal payments for the past three years to avoid default, Mr Bracher's confidence may appear overweening. Many of the 700 banks around the world which are owed money by the Brazilians certainly did not like the new tougher Brazilian position and complained vociferously about it.

Some went further and responded by cutting off, or reducing, their short-term credit lines to Brazil banks abroad, the most vulnerable aspect of the country's external economy, in view of the size of the Brazilian branch network overseas.

In previous years, Mr Bracher had, Brazil honoured defaults by private Brazilian banks of foreign dollar loans. "But then," he added, "the banks were lending money to us. Now the circumstances are different."

The message is clear enough. Mr Bracher apparently intends to hold the loans in abeyance until foreign banks can see their way to easing Brazil's considerable interest burden, which averages around US\$10bn to US\$11bn a year.

With no new infusions of International Monetary Fund (IMF) cash or private bank money on any significant scale since 1984, Brazil has been the exception to the rule in Latin

America: in that its hefty trade surplus of the past two years have helped it keep interest payments up to date.

The healthy export business has also swelled foreign reserves, from a negligible US\$1bn a year ago to US\$8bn today, giving the new civilian government the confidence to speak a little more loudly with its creditors.

A quick look at the country's economic scoreboard shows why Brazil, traditionally a moderate on debt issues, feels it can afford to take a tougher stance.

The economy is expected to

source of pressure on money supply, expanding at rates faster than inflation.

But to squeeze the money supply much tighter and reduce the public sector deficit by any significant amount over a short period would have serious implications for the all-important gross domestic product growth target of 5 to 6 per cent a year, set by the Sarney Government.

This is where the critical trade-off lies between the domestic and the external economy. At some future point—no one knows exactly when—the interest burden and the need to sustain industrial growth through higher machinery imports will be at loggerheads.

The Brazilian solution for that impasse is no bank default or moratorium or default, a threat heard frequently from radical politicians and economists two years ago.

One often heard solution, particularly in the hawkish planning ministry headed by Mr Joao Sayad, is the capitalisation of interest payments or their conversion into new loans. A variation would involve the signing of a "cap" on net foreign transfers, possibly linked to foreign trade performance or the level of the reserves.

The raising of compulsory new loans from foreign creditors is also aired from time to time by Government officials. In the face of solid resistance from the banks, and the fact that no comprehensive rescheduling agreement is likely in the near future, this idea seems unlikely to take off.

Perhaps surprising to many outsiders, however, and many others on the economic team think the country's best bet is to persuade foreign bankers to resume voluntary lending again on a significant scale—a practice suspended abruptly in September 1982 when Mexico halted payments on its foreign debt.

According to Mr Olimpio Almeida, head of the Central Bank's foreign capital department, "It is still just a trickle, but some US and Japanese banks have begun this year to make small commercial operations without Government backing." For the Brazilians this is a positive sign.

grow by seven per cent this year on top of 4.5 per cent in 1984. This contrasts with little or no growth between 1980 and 1983.

Libor, the interest rate which governs 60 per cent of Brazil's interest payments was 12.72 per cent in July last year, but has come down to around an estimated eight per cent. Every full point reduction is forecast to save Brazil about US\$1bn on its interest bill.

Oil prices still critical for Brazil, despite its higher domestic oil production of recent years, are also moving in the right direction for a country which will spend 42 per cent by total volume on its import purchases of oil.

On the debt side, a major source of concern remains the country's internal public debt, growing at geometrical rates because of inflation-indexed Treasury bonds. The debt in the hands of the public is estimated at around US\$300m and its growth has been the main

economic rigidities of the IMF, and they are canvassing the idea of the bank taking over the economic monitoring function handled by the Fund on behalf of commercial creditors.

Not that the World Bank has become a soft touch. Far from it, at present major loans of \$350m to agriculture and \$250m for the alcohol fuel programme are in cold storage because of disagreement over the tough conditions the bank would like to attach to their use.

A jumbo package of \$1.2bn in loans for the hard-pressed electricity distribution sector has just gone through after lengthy negotiations on a financial recuperation programme which involves tariff charges rising above the prevailing rate of inflation for the next few years.

A certain amount of reorientation has already taken place. The World Bank, for example, has for years been the major supporter of projects in the backward north-east and recently approved a \$100m loan for 700,000 small farmers in the region. But the process of turning round the overall direction has been frustratingly slow for Brasília, and for some of the lenders' own officials in the field.

The International Finance Corporation, meanwhile, has continued throughout the turbulence of the debt crisis to plug away quietly at its projects, mostly in industry.

Over the past decade the IFC has approved investments in Brazil totalling over \$1bn, on projects costing approximately \$2bn, altogether 56 projects have been financed with loans representing 17 per cent of its global portfolio.

Not all have been a great success. In one of its earliest operations in Brazil, the IFC participated in a short-lived venture to assemble Willy's Jeeps.

Investments in the past most of its funds were also in industrial sectors, such as chemicals, petrochemicals, iron and steel, the priority now has shifted to export or import substitution projects as well as the energy and agriculture sectors in general.

Two success stories which have recently come on stream are the Pira Pira and Paper projects in which the IFC has put in \$50m (including \$10m of fund it handles) and the Sotavele, in which the major US minerals company TMC also has a shareholding.

# Key role in shoring up development effort

Multilateral Lenders  
ANDREW WHITLEY

BRAZILIANS LOVE acronyms. They have an unrivalled national passion for converting undigestible long formal names of organisations into mouth-twisting gobs of initials.

One famous set of initials the International Monetary Fund (IMF)—or FMI as it comes out in Portuguese—they are not too keen on at the moment, despite having received the best part of \$3.5bn from the Washington-based "org" over the last two years, without actually conceding too much in return.

Mr Dilsen Fumero, the finance minister, announced last month that Brazil would no longer seek a formal agreement with the IMF to replace the three-year extended fund facility accord suspended in February.

But it is a different story when Brazilian officials talk about some of the other multilateral lending institutions based in the US capital: the World Bank, the IDB, the Inter-American Development Bank, the BID, and the International Finance Corporation, the World Bank's private investment arm.

All three of these organisations continue to play a key role in the Brazilian economy, helping shore up the development effort at a time when the Federal Government has severe cash flow problems and, in the case of the first two, providing what can only be described as general balance of payments support.

Over the past two decades Brazil's enormous appetite for foreign borrowing has turned it into the world's largest single recipient of funds from each of these three lenders.

If relations with the IMF continue on their present downward path, the role of the World Bank in particular is likely to assume even greater importance over the coming years.

Officials say they think the World Bank's pro-growth, development mentality is more suitable for Brazil than the

staying on average over the years within the set limit. A good example of IDB's loans are going into projects in the transportation sector, such as feeder roads in priority development regions. The remainder is allocated to agriculture, energy and social sectors.

As the new civilian government of President Jose Sarney is publicly committed to putting far greater resources into social infrastructure—everything from sanitation, housing, medical facilities to higher and better prisons—the multilateral lenders are also being urged to move further in that direction.

A certain amount of reorientation has already taken place. The World Bank, for example, has for years been the major supporter of projects in the backward north-east and recently approved a \$100m loan for 700,000 small farmers in the region. But the process of turning round the overall direction has been frustratingly slow for Brasília, and for some of the lenders' own officials in the field.

The International Finance Corporation, meanwhile, has continued throughout the turbulence of the debt crisis to plug away quietly at its projects, mostly in industry. Over the past decade the IFC has approved investments in Brazil totalling over \$1bn, on projects costing approximately \$2bn, altogether 56 projects have been financed with loans representing 17 per cent of its global portfolio.

Not all have been a great success. In one of its earliest operations in Brazil, the IFC participated in a short-lived venture to assemble Willy's Jeeps. Investments in the past most of its funds were also in industrial sectors, such as chemicals, petrochemicals, iron and steel, the priority now has shifted to export or import substitution projects as well as the energy and agriculture sectors in general.

Two success stories which have recently come on stream are the Pira Pira and Paper projects in which the IFC has put in \$50m (including \$10m of fund it handles) and the Sotavele, in which the major US minerals company TMC also has a shareholding.

## WHO'S WHO ON THE POLITICAL FRONT

Dilsen Fumero  
Minister of Finance

During a political rally in Sao Paulo in 1984, Dilsen Fumero climbed atop a podium with opposition politicians to call for the abolition of indirect presidential elections called by the ruling military, and their replacement with a direct popular poll.

The campaign was ultimately unsuccessful. But the 52-year-old industrialist made an impression on the opposition politicians who, as it turned out, came to power last month through the indirect elections.

His name was pushed by the Brazilian Democratic Movement Party for the post of finance minister, but the job was awarded instead by the president-elect, Tancredo Neves, to his own nephew, Francisco Dornelles.

As it happened, Fumero, who had served in the Sao Paulo state government in the early 1970s, was close to the vice-president on the opposition slate, Jose Sarney and his family.

Thus, when first Mr Neves died, to be succeeded by the vice-president, then Mr Dornelles found his position in the Sarney cabinet untenable

and resigned, the Sao Paulo businessman was the obvious candidate to take over the finance portfolio, the key economic post in the Government.

Mr Fumero is the owner and founder of Trol, a plastic toys company, which he started in his second year at an engineering college. Trol is today one of the largest toys companies in the country with 1,300 employees, though recently it has not been in particularly good financial shape.

The grandson of poor Italian immigrants, Dilsen Fumero lived for much of his childhood above the family grocery shop. Not surprisingly, given his background, he is an ardent believer in basic social reforms to redistribute wealth and to prepare the poor and illiterate to participate in a democratic society.

As finance minister since August, Mr Fumero has cemented those earlier links with President Sarney and become one of the President's closest aides.

Tax reforms

He has supervised not only foreign debt policy—taking an uncompromising line on the need not to interfere with economic growth—but recently introduced far reaching tax reforms, to take effect in 1986. For the first time a general sales tax, of 40 per cent, has been introduced.

In early 1984, Mr Fumero was forced to step down from his job as chief executive at Trol because of a bout of cancer. He soon recovered, and today that he has recovered completely, but the experience has clearly left deep marks.

Whereas before he was reported to have been a typical Brazilian, fun-loving and gregarious, the finance minister is today an austere and serious man, with little apparent sense of humour. "When I first met him I tried small jokes every now and then," says a close finance ministry aide, but now I have given up."

R. F.

Leonel Brizola  
Governor of Rio de Janeiro

VISITING Rio de Janeiro earlier this year on a state visit to Brazil, President Francois Mitterrand of France was persuaded by his local host to make an unscheduled diversion from the tight official schedule.

Apparently reluctantly, the French President was persuaded to visit a fine new school built on the orders of Mr Leonel Brizola, the state Governor and self-proclaimed Socialist leader of Brazil.

For Mr Brizola—inventor of an ideology known as "Brazillian Socialism"—the visit of the French Socialist President was a cause for considerable pride. Double the joy, then, that he could take the visitor to see one of his dearest offspring, part of a network of "Integrated centres of Popular Education" or, as the smart new schools were quickly dubbed—"Brizolinas."

Governor Brizola is the enfant terrible of Brazil, a populist leader from the 1930s and early 1960s who was forced to flee the country after the 1964 military coup and subsequently spent many years in exile.

On his return, he won a sensational victory in the 1982 elections held by the military to capture the state governorship of Rio de Janeiro, a victory which was the acid test for the military's stated determination to allow the results of free elections to stand.

Summing up the reaction of the right to the return of the former fire-brand, General Euclides Figueiredo, brother of the then President, commented, "Brizola is a toad we shall have to swallow—to spit out at the right moment."

Instead, it was General Figueiredo and the rest of the military who were forced to

withdraw from the political stage this year, while the Brizola phenomenon shows no signs of dying out in terms of its popular appeal.

Now 63, the Rio de Janeiro governor is undoubtedly the most powerful challenger for the presidency from the left. His political machine may be weak, and his electoral base largely confined to his home state of Rio Grande do Sul and his adopted state of Rio de Janeiro, but his charismatic personality has other Brazilian politicians quaking.

When the present coalition Government came to power in March 1984, Brizola kept himself aloof, refusing to be drawn into the new ruling establishment. Keeping his powder dry, he has consistently argued in favour of immediate, fresh presidential elections based on a direct poll rather than the "illegitimate" indirect elections held by the military.

To his ardent admirers, the Rio governor is a charming, inspirational leader, but to his opponents—and there are many of them—he is a dictator, a "Caudillo" of the traditional Latin style, carried away by empty oratory and vague sentiment.

For Mr Brizola—inventor of an ideology known as "Brazillian Socialism"—the visit of the French Socialist President was a cause for considerable pride. Double the joy, then, that he could take the visitor to see one of his dearest offspring, part of a network of "Integrated centres of Popular Education" or, as the smart new schools were quickly dubbed—"Brizolinas."

Governor Brizola is the enfant terrible of Brazil, a populist leader from the 1930s and early 1960s who was forced to flee the country after the 1964 military coup and subsequently spent many years in exile.

On his return, he won a sensational victory in the 1982 elections held by the military to capture the state governorship of Rio de Janeiro, a victory which was the acid test for the military's stated determination to allow the results of free elections to stand.

Summing up the reaction of the right to the return of the former fire-brand, General Euclides Figueiredo, brother of the then President, commented, "Brizola is a toad we shall have to swallow—to spit out at the right moment."

Instead, it was General Figueiredo and the rest of the military who were forced to

withdraw from the political stage this year, while the Brizola phenomenon shows no signs of dying out in terms of its popular appeal.

Gulmaras from his base as leader of the Brazilian Democratic Movement Party (PMDB), was a consistent force for peaceful change. In coalition with the PFL, the Liberal Front Party, Mr Gulmaras upheld a constitutional succession after the traumatic death of his close friend President-elect Tancredo Neves and the swearing in of a military president, General Sarney as President.

Long a presidential aspirant himself, Mr Gulmaras ran as an opposition candidate in 1973 against the handpicked military, Ernesto Geisel.

From his present position as president of the Chamber of Deputies, Mr Gulmaras is next in line constitutionally to assume the presidency.

If the upcoming constitutional Assembly votes to reduce the current presidential mandate from six years to four, he could still be considered young enough at 72 by his colleagues to try again for the presidency. However, given the appearance of new younger and capable politicians and the country's concern of once again electing an older man whose health could fail, Mr Gulmaras still has to put forth a convincing case for his candidacy.

Unbasking in his efforts to build a strong grassroots base, the party leader travelled over 11,000 km stumping for local mayoral candidates in recent elections. The results last month were hardly pleasing, dealing a blow to the PMDB and to the personal ambitions of Mr Gulmaras.

PMDB candidates were victorious in 19 of 25 state capitals and won in nearly 50 per cent of the remaining municipalities, but the party's candidates lost in Sao Paulo and Rio de Janeiro, Brazil's two most populous cities.

Defeated in his own backyard of Sao Paulo, Ulysses Gulmaras and his party now face the need to develop party strategies to challenge the growing success of leftist and populist candidates if the party is to maintain its majority in Congress and its role as the country's leading political party.

**BRITISH AIRWAYS**  
The world's favourite airline.

# It's the right time for Brazilian Coffee.

Coffee is the second most important commodity in world trade after oil.

And Brazil is, by far, the world's largest producer and exporter of coffee.

Two simple truths, but there's a lot behind them:

— Some 3.5 billion trees, spread over more than 2.7 million hectares of land, yielding a variety of high-class grades of coffee;

— An extensive network of growers and traders, backed by experienced credit organizations;

— An efficient port system which guarantees prompt delivery to all parts of the world.

That's why in 1985 Brazil will be selling more than 18 million bags of coffee (132 pounds each!) to customers in the four corners of the globe, while 7.5 million bags will be drunk by Brazilians themselves!

That's why it's always the right time for Brazilian coffee. The best selling coffee today as yesterday, and tomorrow.

The Brazilian Coffee Institute, 6, St. Alban's St., London SW1Y 4SG.

Lloyds Bank operates in this market only.

Foreign trade is one of Lloyds Bank's specialities. Nothing more natural, then, that it should feel very much at home here. And so it does. Today, Lloyds Bank has more than 2,600 branches well distributed all over the map. And they all work as veritable logistic support bases for your

foreign business. If exporting is your business, have Lloyds Bank at your side. As a specialist in foreign trade, Lloyds Bank finances exports too.

But, with Lloyds Bank, it's not just you on one side against the powers on the other. Lloyds Bank's strength

works the whole time with you, for you, on your behalf. Because, for Lloyds Bank, financing exports means helping you to solve all your problems in this field. Anywhere. Again, nothing more natural for one who operates in this market only.

For the time being.

## BRAZIL 4

### A policy of land reform

**Agriculture**  
ANN CHARTERS

BRAZIL'S FIRST civilian Government in 21 years inherited an agricultural sector highly successful in growing crops for export but sadly amiss at producing enough food at prices accessible for the majority of the population of 134m.

Agriculture is responsible for over 11 per cent of gross domestic product and has traditionally been a mainstay of the economy. Under the military it developed from being largely a producer and exporter of basic commodities such as coffee, cocoa and sugar into a diversified sector with a high value-added content.

Brazil is today the world's leading exporter of orange juice, frozen chicken and, last, tobacco, and second only to the US for soy products. Much of this transformation has taken place over the past decade and its social consequences within Brazil have been far-reaching.

The new Government took office in March full of good intentions to reverse the tendency back in favour of foodstuffs to feed a fast growing population—Brazil ranks sixth in the world in terms of malnutrition—lessening what was considered to be an excessive stress on the export sector. But there it was able to stitch together a comprehensive agricultural policy, which could increase food production without losing sight of the all-important export earnings. It sent severe shocks through the rural establishment with its decision to launch an ambitious land reform programme.

Barely in office two and a half months, the Sarney Government announced that it would implement a 1964 land statute which would have given land to 7m rural families over the next 15 years. It thought out the plan stirred up a hornet's nest in the countryside which shows few signs of dying down. From the densely cultivated southern states to the uncharted areas of northern Brazil disputes over land erupted, often to be resolved at the point of a gun.

The incidence of disputes dropped slightly in mid-October when the Government announced a revised—and much watered-down—version of the plan, and announced that reform would begin initially on government-owned lands.

Under the new plan, expected to come into effect shortly, 1.4m families are to be given land during the four years President Jose Sarney expects to be in

power, at a cost of 43.2 trillion (million cruzeiros (US\$7.9bn)). The plan estimates that 430,900 square kilometres will be necessary to settle the region.

Despite the way in which the Government has backtracked from an earlier promise to expropriate land in private hands, some scepticism remains over the Government's long-term intentions. Idle private lands could be subject to reform at later dates, according to the revised plan.

If the twin goals of cutting down on rural poverty and increasing food supplies are to be met, agricultural experts agree that the Government needs to provide peasant families with the means to be successful farmers. In this respect access to credit is badly needed, so as to make up for shortfalls in domestic supplies and help bring down fast rising prices.

The central question facing the Government is over how to structure an attractive package of incentives for the farmer which will increase production while lowering retail food prices.

The president of FAPESP, the Federation of Agricultural Producers in São Paulo, the leading farm state, Mr Fabio Meirelles, is in no doubt about where the balance of advantage has fallen so far: "The Government is trying to contain food prices for consumers at the expense of the producer," he declared.

Rising food prices have been a major pressure behind Brazil's triple digit inflation.

Many agricultural authorities from the most important growing regions in the south and centre of the country criticise the new minimum support prices as being insufficient to cover rapidly rising costs. Fertiliser and pesticide costs in particular have soared, leading to a worrying decline in their use on the land.

What does not help the always uneasy relationship between farmers and the Government is the fact that in Brazil much of the bureaucracy responsible for the sector is politicised. Many officials have little personal knowledge of the fields they are responsible for.

Mr Pedro Simon, the agriculture minister, who represents Rio Grande do Sul, an important farming state, has little control over some of Brazil's major crops.

Coffee, sugar cane and cocoa policies are set by agencies

Soy planting in Campinas, São Paulo state

August substantially higher minimum support prices for 13 of the 20 basic foodstuffs. Even so agricultural experts remain sceptical over whether the increases are sufficient to avoid shortages in the future.

This year the Government has had to authorise substantial imports of meat, maize, rice and even some soy beans, apart from traditional wheat imports, so as to make up for shortfalls in domestic supplies and help bring down fast rising prices.

The central question facing the Government is over how to structure an attractive package of incentives for the farmer which will increase production while lowering retail food prices.

The president of FAPESP, the Federation of Agricultural Producers in São Paulo, the leading farm state, Mr Fabio Meirelles, is in no doubt about where the balance of advantage has fallen so far: "The Government is trying to contain food prices for consumers at the expense of the producer," he declared.

## Ready for fresh investment

**Petrochemicals**  
ANN CHARTERS

ROBUST growth in demand for their products means that Brazil's three major petrochemical complexes are ready for fresh investment.

Exports have risen almost tenfold from US\$100m in 1979 to almost US\$1bn last year, according to Chemical Industry Association figures, and since September domestic demand has picked up strongly, returning to pre-recession 1980 levels.

Subsidiaries of multinationals dominate the industry, often in partnership with Government or private Brazilian companies. But for them the current rocky outlook is clouded by the resurgence of a dormant streak of nationalism among their local competitors, changing the rules of the game, especially in the higher-value fine chemicals and pharmaceuticals.

Brazil started its own petroleum refining relatively late. Only in 1955 did the state-owned refinery in Cubatão, near São Paulo, come on stream with an output of 45,000 barrels a day. This laid the basis for a petrochemical industry in the region.

Conceived initially as a private venture, built to cater to foreign companies, the Cubatão complex remains one of the power houses of the industry, even though its ownership structure has changed over the years.

Once the São Paulo plant was progressing, the Brazilian Government decided to enter the field in its own right as a major participant. Petrobras, a subsidiary of Petrobrás, the state oil monopoly, was thus created in 1967, to represent the Government in joint ventures.

This led to the establishment of the Capuava complex, up the mountain ridge from Cubatão, as a second generation centre. Altogether 15 companies have invested US\$450m in Capuava.

As the doyen of the Brazilian petrochemical industry, the twin-centre São Paulo plant produces 400,000 tonnes of ethylene and 130,000 tonnes of benzene annually. This feedstock is, in turn, supplied to downstream manufacturers of inter-

mediary products such as polyethylene—both low and high density—propylene, PVC, styrene and polystyrene.

Having "balanced" the first petrochemical project, that is with all streams of the refining process being utilised for the final production of high value chemicals, the new international companies participating swelled to impressive proportions.

Included are such household names as Union Carbide, Shell, BASF, Bayer, Monsanto, Dow Chemicals, Gulf, Phillips Petroleum and Rhone-Poulenc.

By 1970, however, it was becoming clear that the São Paulo complex on its crowded coastal strip would either have to find room for expansion or a fresh site in Brazil for petrochemicals would have to be chosen.

It was then that the Government took the essentially political decision to establish a second, distant development in Bahia in the backward north-east.

The Camacari complex outside the city of Salvador was designed from the start to be far bigger and sophisticated than its counterpart in São Paulo, replacing all the petrochemicals Brazil was then importing. A few chemical plants had already been established in the region, attracted by subsidised Government finance and generous tax breaks, but to all intents and purposes Camacari was a "greenfield" site.

To co-ordinate the establishment of the complex, the Copene-petroquímica do Nordeste—another subsidiary of Petrobras, was set up, with a brief to manufacture, sell, import and export chemical and petrochemical products.

By 1984, 12 years after its launch, the Copene plant was producing 1.3m tonnes of basic petrochemicals, including 423,000 tonnes of ethylene and 170,000 tonnes of benzene. It supplied 22 other industries in the complex.

Copene's financial results have been excellent. Before tax earnings for the year to October 1984, were US\$181.6m, while net income showed an increase of 138 per cent over the previous year, laying the basis for planned future investments in fine chemicals.

Almost all Copene's voting shares are controlled by Petroquímica and a recently established private partner,

Norquiza. Giving the company additional weight is the presence of chairman of former President Ernesto Geisel, a retired top army general.

The novelty of the capital structure required by the Government for other companies located in the north-eastern complex was that they should be majority Brazilian and majority privately owned.

A tripartite model was set up, under which Petroquímica would take the largest shareholding—although less than 50 per cent—in association with capital drawn from Brazilian companies in such fields as insurance and banking, and foreign multinationals who would bring in the technology.

This model successfully attracted many multinationals, including major Japanese concerns like Marubeni and Mitsubishi. But experience has shown that three partner companies originally set up to produce a single product have found it difficult at times to agree on how to diversify.

Sited some distance inland, this major complex finally came on stream in 1978, after total investments of about US\$3.5m. According to Copene, it currently produces 2.5m tonnes of final products a year, including such sophisticated items as acrylonitrile for acrylic fibres, DMT and caprolactum. It has annual turnover of around US\$1.8bn.

It is estimated that through import substitution, the complex has saved Brazil in excess of US\$1bn a year in foreign exchange.

The third and newest petrochemical complex located in Brazil's southernmost state of Rio Grande do Sul, has to date been less of a success story.

Overly optimistic assumptions that domestic consumption would continue to grow by 13 to 14 per cent a year were behind the decision to instal yet another complex. As it happened, just after the new installations came on stream at the end of 1982, the country entered its worst recession this century.

Domestic demand for petrochemicals slumped. Designed on the lines of the Bahia complex, production in the southern complex relies on raw materials produced by Copene, an association between Petroquímica and Fibase, a subsidiary of the BNDES, Brazil's National Development Bank.

As of mid-1984, US\$1.25bn out of projected US\$1.6bn had been invested in the complex. Of this US\$750m was spent on the Copene naphtha cracker.

Unlike in the north-east, however, Petroquímica has not insisted on having the largest share of equity in joint ventures, although it has sought to encourage technology transfers from multinational partners.

Among those foreign companies taking part are Hoechst, Rhone-Poulenc, Hercules and National Distillers.

Much of production from the complex is destined for low value added, low density polyethylene. But, according to one chemical industry expert, the high per capita income of Brazil's southern region gives the complex much potential for growth in the long term.

In strategic development terms, the decision to establish three complexes so far apart from each other is understandable. But the cost to the country in terms of industrial efficiency has not been slight, especially in view of the fact that none are on coastal sites.

Against these obvious transport disadvantages, the petrochemical industry in Brazil has benefited from Government-set, nationwide pricing structure, controlling raw material as well as final product prices.

With prices set on a cost plus basis, calculated on costs at the oldest complexes, which have higher capacity utilisation, lower debt, more depreciated equipment and lower working costs, consequently enjoy higher profit margins.

To compensate for the post-1980 slump, the Brazilian petrochemical industry has had to resort to exports in recent years in order to maintain capacity utilisation. The country's plants were not constructed with the world market in mind, but recent experience has shown that exporters can balance domestic slumps and could be given a larger role in planned production.

Long-term interest among petrochemical companies has, meanwhile, turned increasingly to the manufacture of fine chemicals and pharmaceuticals. This has touched off a heated debate within both the industry and Government over the extent to which the multinationals should be forced to abandon their near monopoly position.

## Setback after years of rapid expansion

**SOYA IS the Brazilian miracle crop.** From a standing start ten years ago its astonishing growth in output has catapulted Brazil into second place in the world, behind the US, on the international market.

Last year the combination of beans, meal and oil together made soya the country's most important export item, ahead of coffee, earning US\$2.5bn.

This year, however, the tale from the farms is rather more woe-begone, as producers and exporters alike glumly watch the current slump in world prices. The recent drop in the Chicago Board of Trade to \$4.80 per bushel is below the average Brazilian producer's cost of \$5.

But with planting already under way for the 1985-86 crop, farmers show little inclination so far to abandon what until recently was an extremely attractive cash crop. Yields are rising, new strains, better productivity and more acreage on virgin, frontier land is being brought under soya.

In late 1984, Brazilian farmers planted a record 10m hectares of soya beans, an increase of eight per cent over the previous year. Output was even more spectacular, rising by a whopping 17 per cent in 1984/1985, to 18.2m tonnes, according to official statistics.

Most of the increased production came from the newest producing region, the landlocked states of Mato Grosso, Mato Grosso do Sul and Goiás, where climate and land may be ideal, but storage facilities are in short supply and freight costs to ports or crushers escalate with distance and road conditions.

Faced with depressed prices abroad, however, the Brazilian Government this year was forced for the first time to buy in soya from the farmers. For those more distant from major domestic markets, the guaranteed minimum support price was higher than local market levels, after freight costs had been discounted, causing a predictable scurry to sell to government buyers.

Losses were incurred in a few instances of fraud, where the quality of beans in storage was lower than that stipulated at the time of purchase. In general, the Government's policy has not been too onerous, as domestic prices have re-

**Soya**  
ANN CHARTERS

cently risen enough to cover carrying costs.

Despite the Government's willingness to buy up surplus production at reasonable prices, the small, under-capitalised soya bean producer is suffering an acute financial squeeze. After several default repayments of subsidised rural loans to the state-owned Banco do Brasil and other financial institutions has been postponed for two to three years for small farmers.

For the Government and legislators in Brasília the plight of the soya farmers was clearly brought home earlier in the year. Taking a leaf from the book of French farmers, columns of trucks blocked the main highways of the capital day after day in an angry protest at what the farmers said was inadequate official support.

Provided the international price slump does not persist, the larger, more efficient producers, who are also better capitalised, should be able to ride out the present crisis.

Those who had the foresight, and good luck, to plant wheat this year—as a swingcrop to soya beans—experienced a windfall, with bumper crops and good prices, which more than compensated for their losses from soya.

On the export side, government trade officials were forced by the crisis to backtrack from their previous promises of free trade for the sector. Fearing a repetition of last year's domestic shortages of soya oil—a basic staple in the Brazilian diet—in mid-July Cacez, the foreign trade authority, suspended export registrations of beans and products.

In 1984, the temporary halt to exports was caused by heavy over-selling in the first half of the year, as Brazil strove to improve its overall balance of payments. Soya even had to be imported for a while, an embarrassing turnaround, to make up for domestic shortfalls.

Before this year's suspension, bean exports had reached 2.4m

tonnes, an increase of 143 per cent over the same period in 1984. Meal exports, meanwhile, were up by 11 per cent to 4.85m tonnes and oil by 17 per cent to 623,000 tonnes. The increase in bean exports as opposed to the higher value products reflected the international price situation.

Despite the current doldrums, the long-term prospects for Brazil as a major world supplier of soya beans remain excellent. Agricultural experts agree that Brazil is as efficient a producer as the US, productivity yields on average are 1,793 kilograms per hectare, with the two most prolific states of Mato Grosso and Paraná setting the pace for high yields, at 2,075 and 2,009 kilos per hectare respectively.

With these good yields already in hand, Brazilian producers need now to concentrate on reducing their high transport costs.

Some of the biggest producers, such as Mr Odalcyr Francisco de Moraes, are confident that this hoped for improvement in infrastructure, to get agricultural produce to world markets, will take place over the next five to ten years. One highly ambitious project, linking the two interior states of the Mato Grosso region to the southern port of Paranaguá, involves an intricate river and railroad hookup to the port.

Although the project is still without a price tag, Mr Moraes, the soya king of Brazil believes it will be justified by an expected doubling in world consumption of soya beans by the year 2001. Higher demand could come in particular from other Third World countries, he says, as protein-rich soya meal could contribute to improved diets.

Meanwhile, as he waits for international prices to recover, Mr Moraes has slowed down planting on his own enormous 100,000 hectare farm in Mato Grosso state. With only 10,000 hectares planted so far, the rest of the land will come slowly under cultivation over the next four years.

Echoing many farmers sentiments, the soya king explained the willingness of farmers to face uncertainty after year in this way: "Land is gripping, absolutely breathtaking. But it can also be the simplest and happiest way to lose money."

Francisco de Moraes: the soya king of Brazil

## Profile: Odalcyr Francisco de Moraes

### Efficiency transforms the new frontier

**BANKER, FARMER and contractor, Mr Odalcyr Francisco de Moraes is the soya king of Brazil, the best-known example of a new breed of entrepreneurs who are transforming the interior frontier regions of the country.**

The sole owner of two vast tracts of virgin land, 50,000 hectares (125 square miles) in Mato Grosso do Sul and another twice its size in Mato Grosso state, Mr Moraes is used to rubbing shoulders with the rich and powerful. Both former President João Figueiredo and the current incumbent, President José Sarney, made much publicised trips to the Fazenda Itamarati in Mato Grosso do Sul to stand in the fields and admire his soya crops. His picture frequently adorns magazine covers in Brazil.

What brought Mr Moraes to public notice is undoubtedly his vision and efficiency in transforming the frontier into highly productive farmland on a grand scale. But it was his other activities which gave him the basis for the recent venture into soya.

Earnings from construction have spawned an empire of 23 companies, including the two giant farms, five experimental cattle ranches in the Amazon, an alcohol distillery and a small bank, Banco Itamarati. Constran, the country's seventh largest construction company, was responsible, among other projects, for the runways and aprons of São Paulo's brand new international airport.

The Itamarati group, in

30th place among Brazil's many private business conglomerates, had assets of Crudeiros \$48.6bn (US\$17.5bn) at the end of 1984, according to an annual analysis of Brazilian business. But this valuation may seriously underestimate the man's true worth.

With a grandfatherly air which belies his 54 years, and his toughness in building an empire from his first undertaking in a rapid delivery service at the age of 19, Mr Moraes is outspoken in his belief that Brazil can rival the US in agricultural production.

Given fair minimum prices for crops, which take Brazil's triple digit inflation into account, and a free choice in planting, he believes Brazil's farmlands can amply supply the local market and compete world-wide.

Mr Moraes deplores what he considers to be the "demagoguery" which pushed the Federal Government earlier this year into announcing a highly controversial agrarian reform programme. He argues that this will be based on mini-properties which would have to be worked miserably by hand, as in the middle ages, condemning the farmer to earning a pittance.

"It is only right that the Government start reform with its land," he said "but it must allocate at least 300 to 500 hectares to each farm, so modern techniques have a chance to make the farm a success."

Ann Charters

## Out to improve vine and grape quality

**Wine**

ANDREW WHITLEY

**WHEN Dom Eudes de Orleans E Bragança pretender to the throne and a direct descendant of Brazil's last monarch, Dom Pedro II, was persuaded last year to lend his name to a new Brazilian wine, it was clear to all that the noble grape had arrived.**

Brazil is not, by any stretch of the imagination, a traditional wine producing country. Until 1970 production was tiny and outside Rio Grande do Sul state in the south, it was hard to find a decent bottle. Brazilians drank beer or cachaca, the local sugar cane spirit, while those who could afford it drank whisky or imported wines, usually from Chile.

In fact, wine producing came to Brazil just over a century ago, together with the poor immigrants from northern Italy who were settled in the billy region north of Porto Alegre, capital of Rio Grande do Sul. The climate was too wet — double the rain received in the main producing regions of southern Europe — and disease proliferated.

Quality was inconsistent and indifferent. But this was what they knew best to do. What transformed this picture was the arrival of the big multinational drinks companies, starting about 15 years ago. The technology they brought, and the standards they were able to impose, created a new local market for Brazilian wines in the big population centres of São Paulo and Rio de Janeiro.

Mr David Wicker of National Distillers of the US, makers of Almaden wines in California, was one of the first to see the potential. But instead of going to the traditional wine-making region in the "Serra" he opted for the rolling pampa country to the south, by the Uruguayan border.

Here, on 1,200 hectares of sandy soil, Almaden has created the largest single vineyard in Latin America. And where it has led the way, others are following: Heublein, a division of Reynolds, has taken a tract of land nearby, as has a Japanese concern which handles the Coca Cola franchise back in Japan.

As Mr Wicker points out, the new Brazilian vineyards are bang in the middle of the latitude belt encircling the globe which contains all the major wine producing regions

of the southern hemisphere, from Chile, to Argentina, then on to South African and Australia.

Climatic conditions are ideal. Long, dry summer days are followed by cold winters to let the vines rest. When it rains a drying wind rapidly removes the moisture. The sandy soil also permits rapid drainage.

After nearly 10 years of preliminary work, Almaden's wines finally hit the market in Brazil in late 1983 and have made a big impression.

Output is still relatively small. Next year's harvest, in February and March, should produce about 2.3m litres of wine. But the US company has highly ambitious plans to be "the biggest and best" producer of fine wines on the continent.

Almaden, together with a traditional Brazilian house, Sociedade Vinícola Rio-Grandense, are the only wine makers in Brazil to have their own grapes. All the other wineries have to scramble for the limited quantity of good quality grapes produced by the small, family-owned vineyards responsible for the vast bulk of Brazil's output.

But competition is intensifying among the big names of the world wine business, in response to the astonishing way in which the local market for good quality wine has shot up over the past five years.

During the depths of the recent economic recession in Brazil, when the middle class purse was severely squeezed, and conventional wisdom would have said that such luxury items as wine would be cut out of budgets, sales went crazy. Between 1979 and 1984 total consumption rose by 40 per cent, at a time when sales of the local red "rotgut," responsible for the bulk of production, was on the decline.

Brazil still only consumes about 2.6 litres of wine per head annually, compared with seven or eight litres in the US and an awesome 72 litres in Argentina. But the enthusiasts see this as evidence of how much room there still is for market growth.

Among the other international companies who have staked their claim in the market are Suntory of Japan, who expect to be producing annually 1.3m cases in five years' time, mostly for export, Seagram, Martini and Rossi and Moët e Chandon.

Seagram have invested considerable effort recently in upgrading the quality of their wines, while Moët e Chandon in association with Cinzano and the Brazilian company Montezoro Aranha make a good middle range of wines and an acceptable champagne.

But if the 1970's was the decade of the technological revolution for wine in Brazil, the current decade has already been dubbed the one in which the great breakthrough on vine and grape quality should take place.

At the centre of an ambitious research effort is the Government's \$50m agricultural research station in Bento Gonçalves, the capital of the wine-making region. With facilities as advanced as any in France, here Brazilian agronomists and biologists are studying 900 varieties of seedlings to see which will "take" in the local conditions.

Much of the sophisticated laboratory work in Rio-Grandense is also aimed at combating the diseases which plague the region's vineyards, such as mildew, leaf roll and other fungi.

Although the centre has only been operating fully for four years, the results so far leave its chief, Mr João Giugliani Filho, enthusiastic. Already among the top ten largest producers in the world, he claims that once the raw materials have been improved Brazil will enter the first division of wine producing countries.

Rio Grande do Sul is responsible for 90 per cent of Brazilian wine. But in the coming years it could face a strong challenge, at least in terms of production, from a most unexpected source: the São Francisco river valley in the semi-arid north-east of the country.

Here, with constant heat all the year round, newly planted vineyards are producing an astonishing five harvests every two years. The quality may not be good enough for fine wine, but the volume could be prodigious.

## Banco Econômico.

### A symbol of efficient services.

Originating in 1834 with its head office in Salvador, Bahia, Banco Econômico S.A. ranks as the oldest private bank in Latin America and has maintained an unbroken record of dividend payments to its shareholders for over 151 years.

As one of the major banking groups in Brazil, it possesses a network of almost 500 offices throughout the entire country, and in addition to having the strongest presence of any bank in the North and Northeast, it has 19 exchange offices situated in the 16 leading states. Econômico is therefore able to offer a complete and efficient service as correspondent to foreign banks, covering every banking activity.

Brazil's exports have shown remarkable growth in recent years and Econômico will be very pleased to assist in finding buyers and exporters for international trade and in promoting direct investment.

Come and share in this with us.

## Strong success in sales to the Third World

### Armaments

RICHARD FOSTER

RECENTLY, television viewers saw the Colombian army storm that country's justice ministry in an effort to dislodge terrorists who were holding several judges hostage. Visible on the screen were several Cascavel armoured cars, part of a fleet of 100 purchased in 1981.

Produced by Engesa, Brazil's leading arms exporter, the three-man armoured car is incorporated into the armies of more than 20 Third World nations. The Cascavel is just one of a growing list of Brazilian weapons invading Third World markets.

With the recent launching of the AMX subsonic fighter, a joint venture with two Italian companies, two new tanks, the 30-ton Tamoyo and the 40-ton Osorio and the sale of Tucano trainer aircraft to the RAF, Brazilian arms are increasingly visible and competitive.

The country's arms industry emerged from almost nothing 10 years ago to occupy a coveted fifth position in world export markets after the US, the Soviet Union, France and West Germany.

While Brazil's industrial complexes, hydroelectric dams and oil refineries have often been built by government-owned companies, the growing arms industry is largely the work of private São Paulo-based entrepreneurs who are a vital part of Brazil's export drive.

It is impossible to say exactly how much these arms exports are worth because a secrecy designed to protect clients. The international defence review puts 1984 exports at \$2.4bn. Brazilian official sources say the figure is closer

to \$1bn. In any case the number is significant for a country which must produce a \$12bn trade surplus this year to pay nearly that amount in interest on its mammoth \$104bn foreign debt.

The arms export explosion is part and parcel of the general growth of Brazilian industry which accounted for more than half of the country's \$22bn in export revenues last year.

The arms industry was given a decided boost in 1977 when President Carter insisted on monitoring human rights violations in Brazil, leading to the rupture of joint Brazil-US military accords. After the break, Brazil decided it could no longer be dependent on a superpower for weapons and parts. The Falklands war reinforced this drive to self-sufficiency when neighbouring Argentina was hurt by the embargo of parts and equipment.

By the estimate of one military attaché in Brasília, the Brazilian Army is now 90 per cent self-sufficient, the navy 80 per cent. The air force which still uses a variety of imported aircraft, such as the Mirage fighter and the Lockheed troop transport, is likely to become more self-sufficient as Embraer, the government-owned aircraft company, proceeds with the development of the AMX and a subsonic fighter now on the drawing boards.

This new military independence rests firmly on an arms industry which employs more than 100,000 workers in 350 businesses.

Unlike producers in rich nations who design weapons for their own armed forces, Brazilian arms makers look first to the export market which absorbs 90 per cent of production. This allows for the design of a product in conjunction with Third World buyers. Other

Brazilian advantages shared with the rest of the country's exporters are low-cost materials and labour.

Because of these factors, the Brazilians are confident they will continue to fill the low-end of the Third World market with inexpensive weapons of simple design and easy operation, or "cheap 'n' cheerful," as one observer calls them. But Brazil also wants to push upwards a bit into markets that impinge more directly on the traditional stomping grounds of arms makers from the rich nations.

"We will very quickly over-pass our western competitors (in Third World export markets)," says José Luiz Whitaker Ribeiro, President of Engesa, an industrial group with 10,000 employees.

Mr Ribeiro, a 57-year-old automotive engineer who 18 years ago converted a truck designed to carry oil field equipment over rough terrain into the Cascavel, says Brazil now holds about 10 per cent of total world arms trade. "The number three position (behind the US and the Soviet Union) will come easy and soon," he says confidently.

A visit to Engesa headquarters in the São Paulo industrial suburb of Barueri lends credence to Mr Ribeiro's boast. Only three months old, the administrative centre is spanking clean.

An enormous parking lot full of late model cars bespeaks the number of engineers and others with middle-class salaries who work in the headquarters. The 10 per cent of the company's profits which are poured into research and development are plain to see in spacious design rooms where mostly young Brazilian engineers use Brazilian computers and US software to design the company's products.

Mr Luis Whitaker Ribeiro, president of Engesa, with the company's Osorio battle tank.

Some observers of Brazil's newly-acquired arms industry tend to discount the weapons as too primitive to provide much competition for the US and Western Europe. But a Western diplomat in Brasília says: "I see a lot of European companies which do not show much concern about the Brazilian threat. But I think one look at Engesa's young, thrifty, dynamic managers gives one cause for second thoughts."

Engesa's latest engineering venture, a pet project of Mr Ribeiro, has designed many of the company's weapons, is the 40-ton Osorio tank, now undergoing field-weather performance trials in the Saudi desert. The Osorio is a Brazilian design hatched in conjunction with potential Middle Eastern buyers.

What the customers wanted, Mr Ribeiro says, is a lower silhouette, lighter weight and cost, but horsepower, speed, manoeuvrability and protection line with more expensive 60-ton tanks such as the British Challenger, the US M1 and the French M240, also being looked at by the Saudis.

The Osorio is priced at about \$2m, according to one source, considerably less than the US and European tanks. It has a hydropneumatic suspension built by the British company, Dunlop, in Brazil. Engesa says the tank lower on the ground than would the more widely used torsion bar suspension.

The gear box is made in Brazil by the West German firm, ZF, as is the 1,000 hp engine by another West German group, MWM. The tank can carry three different guns, including the 105 mm L7 built by the British Royal Ordnance group.

The Osorio in short was custom-designed for Saudi and probably Iraqi needs, using West German and British suppliers with production capacity in Brazil. This allows Engesa to claim that the tank is 100 per cent Brazilian. It also reduces labour costs, maintaining Osorio's price advantage, a major selling point.

There are options to buy 1,500 of the tanks depending on the results of performance trials. According to Mr Ribeiro, the Osorio will dominate the ground market for another four or five years. He claims that the only real competition in terms of price and performance is the Russian-built T-82.

Engesa is the star of the Brazilian arms industry, accounting for \$800m, or possibly more than half of the country's total arms exports.

Another major supplier is Embraer, the government-owned aviation company and builder of the Tucano, the 19-seat Bandeirante and the 30-seat Brasília, both passenger aircraft being exported to the US for use by regional airlines.

Avibras builds the Astroe II, a multiple rocket launcher pur-

chased by Iraq, and is developing an anti-air missile along the lines of the Exocet and dubbed the Barracuda.

Future growth of Brazil's industry could very well depend on rapid strides by small companies, capable of combining engineering skills with an up-beat management style.

One such growth candidate is Bernadim, a small family-owned São Paulo business which started 70 years ago as a builder of safes and armoured cars. The company's most important source of income in recent years has been Brazilian army contracts for the refurbishing of its fleet of M1s, the Korean war vintage US tank. Upgrading and improving the guns on this machine has laid the ground-

work in tank automobiles for the company's first all-Brazilian tank the 30-ton Tamoyo. Dubbed a "tinker, toy tank" by one Western observer, the Tamoyo could make the big have great appeal for small Third World countries whose tanks are not likely to tangle with a Leopard or Challenger.

The tank is priced at under \$1m, half the price of the Osorio. Ironically, Bernadim is using the same low-end market strategy against Engesa that this firm has employed against Western tank makers, and the two tanks are expected to compete against each other in Third World markets.

## Close regulation strengthens the nation's lifeline

### Aviation

RICHARD FOSTER

AIR TRAVEL in Brazil is good by international standards, both in terms of service and scheduling. It is usually safe and reliable, a pleasant contrast with grueling experience passengers often have to suffer on the airlines of many smaller Latin American countries.

Where the railways united the US in the 19th century, aviation has played the same role in Brazil, a country of similar size, since the second world war. But because of its strategic significance for national development, the industry has always been closely regulated by the federal government.

The Department of Civil Aviation, or DAC of the air force-controlled aeronautics ministry, sets fares, approves routes and any changes of controls after the purchase of new equipment.

As has frequently occurred, a privately-owned airline can be barred from purchasing or leasing new aircraft if the DAC feels the new equipment is too expensive to justify the extra competition or that the country cannot afford the foreign exchange.

Service to outlying cities in the north-east, the Amazon and the extreme south is less convenient and more problematic, with aircraft following bus-stop-style routes. Travel from Rio de Janeiro or São Paulo to, say, Porto Velho in the booming north-west frontier region can frequently take more than six hours.

Between the national domestic carriers a network of smaller airlines operate regional services at the behest of the DAC. Although they provide a useful function in the interstices of the national web, their financial situation as in recent years become increasingly problematic, leading to a number of failures and takeovers.

In passenger-kilometres flown abroad is far larger and richer than its major domestic competitors, VASP or Varig. Aerea de São Paulo, and Transbrasil, Varig is the largest airline in South America and the 17th in the world, on a par with the national airlines of the Philippines and South Africa. In the air cargo business it does even better, ranking eleventh on the International Air Transport authority ratings. Immediately after Alitalia and above Swissair.

Like many Brazilian companies, Varig is pushing into

the outside world. But while continuing to schedule nationally established carriers for lucrative traffic from Rio de Janeiro to the US, Europe and Japan, it is also required to maintain less profitable routes to African cities such as Luanda and Maputo, because of Brazil's common links with the other former Portuguese colonies.

A Portuguese acronym for Viação Aérea Riograndense do Sul, Varig began operating in the 1940s as a regional airline under state ownership, based in Brazil's southernmost state. The state's shareholding is now insignificant and a large chunk of Varig's capital is held by the Brazilian public through the stock exchange.

With 31,000 employees and 18 subsidiaries, it is the country's leading transportation service company by far, with annual sales amounting to one quarter of the total of the top 20 Brazilian companies in its sector.

Its domination of the industry is based on four major planks: a monopoly of scheduled international flights, a 71 per cent share of the total of the highly profitable shuttle between Rio de Janeiro and São Paulo, full control of a regional airline Rio-Sul, and roughly 70 per cent of the domestic air travel market.

Mr Helio Smidt, Varig's president, now 60, began work with the airline at the age of 19. After 41 years of service, he and the airline have become as closely intertwined in the public's mind as Mr Lee Iacocca and the Chrysler Corporation.

Assiduous lobbying in Brasília and effective public relations activities have over the years assured the company's secure hold on the industry. Varig's growth took a major spur in the 1960s when, with government sanction, it absorbed two defunct former competitors, Panair do Brasil and Real Aeronáutica. Both had had international routes when they failed.

But in 1968, for the first time in many years, the Varig dominance has come up against a serious challenge from VASP and Transbrasil, which claim that the industry leader's international monopoly—granted in 1973 for 15 years—was an unfair competition and bad for the country.

They have thus applied to Brasília for a review of Varig's market share, and put in their own applications to change certain international routes they now operate on a charter or cargo basis into full-fledged scheduled services. Brigadier Octavio Moreira Lima, the aeronautics minister, is studying the appeals and a decision is expected in January.

Mr Antonio Angarita, president of VASP, claims his company cannot compete with Varig without a share of international routes. He points out that over 70 per cent of Varig's revenue and a smaller percentage of its profits derive from its international business.

VASP wants authority from the Government to schedule regular flights to the Dutch Antilles, Martinique and Orlando, Florida. Transbrasil also runs charters to Orlando, the home of Disneyworld, a popular attraction for Brazilian middle class families. Together the two airlines have cut significantly into Varig's business on the packed-out Rio de Janeiro-Miami route.

The São Paulo airline feels it has already proven its international capability with its charters to Argentina and the US. "In July of this year," Mr Angarita said, "we ran 28 charter flights to Rio de Janeiro, 4,000 tourists from Canada."

Mr Omar Fontana, the owner and founder of Transbrasil, said recently in front of the aeronautics minister that he expects a revision of the Varig monopoly to take place in 1986, two years earlier than planned. Transbrasil would use its three new Boeing 767s to fly to the US if granted permission.

VASP, however, suffers by contrast with the privately-owned Transbrasil and Varig because of what Brigadier Moreira Lima considers to be the revolving door management of the São Paulo state-owned airline.

For better or for worse, the public debate and behind the scenes lobbying between the three airlines has turned into a heated slanging match. VASP says that Varig has bought its way into power in Brasília and that the major airline has become lazy and complacent.

Varig retaliates by arguing that its rivals are not competent to play in the major league with the likes of Air France and Pan Am. "If you give VASP a route to Mexico or somewhere, pretty soon it will be losing money and the taxpayer will have to make up the difference," Mr Smidt says bluntly.

In the meantime, the balance sheets of the three major carriers are all looking much better than they were. Three years of severe recession took its toll on passenger traffic at a time when labour and fuel costs remained high.

The recession years forced heavy cutbacks in ambitious equipment programmes envisaged by both VASP and Transbrasil, although Varig emerged largely unscathed. VASP was forced last year to lease some of its aircraft to foreign airlines as it cut back on its flights by 35 per cent.

Business travel since June has spurred ahead again by an unexpectedly strong 20 per cent a month. And, suddenly, the São Paulo airline finds itself in the embarrassing position of having to cancel scheduled flights it would like to operate because of a shortage of aircraft, though this pressure should be eased shortly with the arrival of new aircraft leased from South African Airways.

Profile: Mannesmann

By Andrew Whitely

## Productivity gains and improvement in balance sheet

Profile: Mannesmann

By Andrew Whitely

MANNESSMANN SA, the Brazilian subsidiary of the leading West German steel tubes and engineering group, has particular cause to remember President Getúlio Vargas.

In March 1954, on what turned out to be his last official function, the late dictator proudly inaugurated the German company's brand new steel mill outside Belo Horizonte in Minas Gerais state. It was the first investment by German business in Brazil since the Second World War, and had important implications for the industrialisation of the country.

President Vargas then returned to Rio de Janeiro, then the capital, and, depressed, shot himself.

The two events had nothing in common, Mannesmann executives are quick to point out, and certainly the company has not suffered in the public mind for being linked to such a tragic event. For the fourth year running, *Exame*, a distinguished business magazine, has just voted Mannesmann the leading steelmaker in Brazil.

It is not the largest steel company, trailing in output behind the big state-owned basic steel mills in an industry characterised by parous finances, it is undoubtedly the best run.

Under Peter Schmidthals, its present chairman, Mannesmann SA has made significant productivity gains and improved its balance sheet. Foreign debt, which stood at \$125m in 1981, has been virtually eliminated, while the company's debt equity ratio has improved from 65-35 five years ago to the current 45-55.

"The worst thing we can do is to borrow money," says Mr Schmidthals, heavily aware of the difficulties other manufacturers in Brazil got into during the recent recession by trying to depend on the banks for working capital.

Trying to steer the 31-year-old company through the recent treacherous waters presented by very high inflation, government price controls and export markets which open and shut at the drop of a hat has not been easy.

In 1983 the German steelmaker ran into bad trouble, recording its first and only loss in its domestic market that year for special steels, in which it is the Brazilian leader, virtually disappeared. The losses on stainless steels, its other main line, was little better.

Shedding labour as fast as it could, at one time capacity

utilisation hit a low point of 30 per cent. Exports saved the day: a big push into the US market last year, with both special steels and stainless tubes, pushed foreign earnings to \$60.1m. Nearly double the 1983 figure.

The one major advantage Mannesmann has over its rivals in Brazil is that most of its equipment has already been heavily depreciated, and in a country which depends crucially on its labour cost advantage, the company takes a very cautious attitude towards further automation.

"We compare the cost of automation with that of labour each year," Mr Schmidthals says, and each time labour wins out by a wide margin. "Using other multinational subsidiaries in manufacturing in Brazil, he says that the advantages of greater automation have to be judged on the grounds of productivity, energy saving and working conditions grounds.

Mannesmann AG, the parent company, has a 70 per cent controlling holding in the \$180m capital of what is one of its largest subsidiaries outside West Germany. The remainder is traded on the local stock exchange.

In Brazil the group consists of three steel and tubes mills in Belo Horizonte and São Paulo. It also controls the Demag heavy machinery equipment and Rexroth hydraulic equipment subsidiaries of the German concern.

The secrets of its success, according to Mr Schmidthals, are its access to sulphur-free reagent coal and more important, its own rich iron-ore mines, just 20 km away. A loyal well-trained labour force at a time of increasing strife in industry has also helped.

Franks in the first half of 1985, compared with the same period of last year, at \$55m, but, paradoxically, the export drive has now tailed off and it is the fast rising domestic market — the company's traditional orientation — which has taken up the slack.

The German subsidiary, contrary to many preconceptions about Brazilian exports, claims to have no special export incentives or subsidies. Mr Schmidthals boasts that in a free market his company could make a profit anywhere in the world — in striking contrast with almost any other steelmaker in the world.

Profile: Rhodia

By Ann Charters

## Plants operating at near capacity

FROM A beginning in 1919 by manufacturing perfume and other sprays popular during carnival festivities, the Rhodia group 65 years later comprises 19 companies concentrated in textiles, basic chemicals, specialty chemicals, pharmaceuticals and agrochemicals among other activities. Investments accumulated over the years total US\$1.06bn.

As for many Brazilian businesses, a pick-up in the economy in the second half of 1984 contributed to Rhodia's 14 per cent growth in real terms after extremely poor results in 1983. These improved domestic sales accounts for 60 per cent of the increase of Rhodia's sales for the year, while exports made up the bulk in last year's improved performance. Total consolidated sales of the Rhodia companies were Cruzeiro 1.6 billion (million million) (US\$718m), with profits of US\$66.4m.

Sales during 1985 are accompanied by substantial growth in demand for chemicals and chemical-related products resulting from the continued strong performance of the Brazilian economy. Companies are operating at near capacity in many product lines.

Accompanying the increasing sophistication of the Brazilian chemical industry, Rhodia SA, a 100 per cent-owned subsidiary of the French Rhodia-Poulenc SA, has moved increasingly into the manufacture of fine chemicals and pharmaceuticals. New products have been added to its vertically integrated company's operations and to substitute imported products. Brazil imports close to 4,000 products classified as fine chemicals, including dyes, other chemicals, agrochemicals and veterinary products, and pharmaceuticals annually, at a cost of US\$450m.

The two divisions, Fine Chemicals and Health Products, contributed 15.4 per cent and 10.3 per cent respectively to Rhodia's sales in 1984. The company's growth in these accounts for 60 per cent of the increase of Rhodia's sales for the year, while exports made up the bulk in last year's improved performance. Total consolidated sales of the Rhodia companies were Cruzeiro 1.6 billion (million million) (US\$718m), with profits of US\$66.4m.

Sales during 1985 are accompanied by substantial growth in demand for chemicals and chemical-related products resulting from the continued strong performance of the Brazilian economy. Companies are operating at near capacity in many product lines.

## Potential continues to outweigh accomplishment

**Mato Grosso**  
ANN CHARTERS

THE MATO GROSSO, that vast expanse of undulating, sparsely populated land between the Amazon and the River Plate basins, has appealed to the imagination of fortune seekers ever since the discovery of gold in the early 18th century.

Today, even though less than 5 per cent of the fertile land has so far been brought under cultivation, the region has been transformed into a major producer of cattle, soy beans, wheat and rice. Mining companies have meanwhile joined the wandering pioneers of gold in a profitable search for precious metals.

Remote and largely untamed, the old state of Mato Grosso adjoining Bolivia and Paraguay, was sentenced eight years ago to be split into two, in an effort to speed up their development. With potential still outweighing accomplishment, the two new states today vie for attention — and money — from Brasilia.

When the split became effective, in 1979, fears were expressed that the new state of Mato Grosso, the northern, less developed half, would be unable to maintain economic growth. Much of its huge territory, equivalent to France and West Germany combined, is under tropical forest. Roads were few and far between.

In fact, what has transpired according to envious local officials in Mato Grosso do Sul, the southern state, is that their northern neighbour has been only too successful at holding out the begging bowl and raking in billions of federal Cruzeiros for special development projects.

While the southern state's fortunes were not helped in the last years of military rule by having an opposition government in power, Mato Grosso benefited heavily from its close political links with Brasilia.

With a slogan of "Four years of government, 40 years of progress," federal aid to the nominally poorer cousin amounted to Cruzeiros 500bn (\$44m) in recent years while Mato Grosso do

Sul received only Cruzeiros 3bn. "It's a myth that this state is rich," complained Mr. Jorge Franco Lopes, a senior official in the agriculture and animal husbandry secretariat of Mato Grosso do Sul.

One big change in recent years has been the improvement of communications between this region and the rest of Brazil.

Settlers in the mid-1800s depended heavily on friendly relations with their Spanish-speaking neighbours across the frontier. To travel to the then capital of Rio de Janeiro involved an arduous and lengthy river and sea journey south via Buenos Aires, the Argentine capital.

The transfer of the federal capital to an inland site in the centre of the country 25 years ago transformed the prospects for the region. At a stroke the psychological centre of gravity of the country had shifted westwards, while Brasilia became a pivot for regional communications.

Cuiaba, the capital of Mato Grosso, is older than its southern counterpart Campo Grande by a full 170 years. Founded in 1719 near Jesuit encampments for Indian tribes, Cuiaba was a pioneer trading post and the main military headquarters for the west of Brazil.

The building of a major trunk road, the BR 364, from Cuiaba to Porto Velho to the north west, has improved the region's road links sharply. But with secondary roads and many important highways still unpaved and precarious in the rainy season, both states still depend heavily on air and river transport.

Mato Grosso do Sul has a rail link to Sao Paulo as well — the so-called "integration railway" because of its key role in bridging the often flooded southern part of the state — but, in general, the lack of good infrastructure means high freight costs and numerous obstacles in getting agricultural products to the main markets of the east.

Independent-minded ever since Campo Grande and its rich cattle barons joined Sao Paulo in 1832 in a short-lived, and fruitless attempt to secede from the rest of Brazil, Mato Grosso do Sul today has an

aggressive plan to attract investors to the state.

During the 1970s the state's population grew by 37 per cent, to stand today at 1.4m. Its economy has diversified modestly into industry. But it remains heavily dependent on agriculture, responsible for 50 per cent of output and commerce, for another 40 per cent.

In agriculture, cultivated crop growth rates have outstripped those of other, more traditional farming states. Output of soy beans has shot up by 74 per cent in five years. And nearly two thirds of existing farmland is now devoted to this important crop. In the 1984-1985 crop year the soy harvest came to 2.5m tonnes.

Wheat production, at 265,000 tonnes, from the southern part of the state also ranked third in the country.

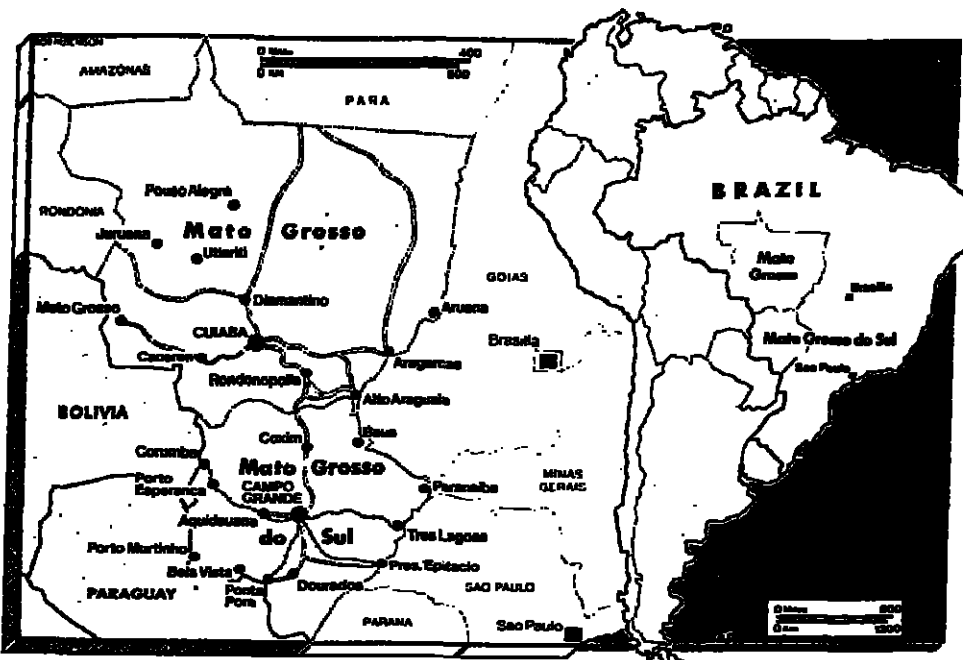

Cattle raising, originally responsible for taming the land, as herds grazed on natural grasses until the 1960s, has become more advanced with the creation of special pastures, better breeding and the installation of slaughterhouses within the state. The cattle herd is increasing annually by about 200,000 head, for a total current herd of 13.5m.

In Mato Grosso state, as well, agriculture is pushing the frontier back. In the current crop year the planted area is expected to increase by 11 per cent over the previous figure of 1.6m hectares. The herd of cattle has increased by 40 per cent over the past five years, to 7.3m, while total grain production has reached 3m tons a year.

With a population this year estimated at 1.4m, and 200,000 more arriving each year, new towns have been springing up almost overnight in Mato Grosso.

Between 1979 and 1985 the number of municipalities nearly tripled, from 28 to 81, and another 20 are now waiting in line to be designated as towns and thus receive the benefit of state services, such as schools, health clinics and electricity.

According to Mr. Enio Otacilio Murinho of the agricultural planning department, Mato Grosso is benefiting from the ambitious federal develop-

Profile: Eliezer Batista de Silva

## Responsible for close links with Japan

BY UNIVERSAL acclaim, Eliezer Batista de Silva, 68, is Brazil's most outstanding state company boss.

President of Companhia Vale do Rio Doce, CVRD, the world's leading iron-ore exporter since 1979, he was the only one of the state company moguls to be confirmed in his position after the change of regime from a military-led to a civilian government in March.

Under his leadership, CVRD has diversified from being an iron-ore mining and exporting company into a diversified empire which embraces 88 directly controlled subsidiaries and a further 66 associate companies, ranging from pulp and forestry activities to aluminium, shipping and railways.

CVRD is also a company highly popular with the stock market. The state controls a bare 51 per cent of its shares. And earlier this year there were widespread fears that control over the mining giant would pass out of the Federal Government's hands because of the success of its debentures sale.

What gives Mr. Batista a highly unusual extra dimension is his affinity with Japan, developed over the years because of CVRD's close trading links with Japanese steel com-

panies. This has made him, in effect, into Brazil's unofficial ambassador to that country.

Aware of Japan's historic interest in long-term, strategic sources of raw materials, the CVRD chief has been single-handedly responsible for the close association of the Japanese Government and business with the greater Carajas development programme in the south-east Amazon and the "Cerrados" grains project in the centre-west of the country.

An engineer by training, Eliezer Batista, a large, rumbustious man who speaks half-a-dozen languages and leads his company from the front, has always had a keen interest in railways.

Hence the stress laid by CVRD on its railway routes from the interior of Minas Gerais state, heartland of the Brazilian mining industry, to the coast and the brand new 790-kilometre railway from Carajas to the sea.

The Carajas iron ore project came on stream this year, on schedule, at its initial annual level of 15m tonnes and is expected to build up to full capacity of 35m tonnes by mid-1987.

Andrew Whitley

Profile: Pirelli

By Andrew Whitley

## Treading a recovery path

HIDDEN away in a back street in the unfashionable Campo Eliseu district of Sao Paulo is the headquarters of Pirelli's Brazilian subsidiary, the largest division of the Italian-based cables and tyres manufacturer outside Italy itself.

Only the helicopter pad on top of the building, provided to whisk executives down to the company's factories in Sao Paulo's industrial townships, is the giveaway that this is the nerve centre of one of Brazil's top manufacturers.

Established in 1929, Pirelli S.A. is the market leader in Brazil in both tyres and cables, with a gross turnover estimated for this year at between US\$750m and US\$800m. Of this, exports will represent about US\$100m, or 13 per cent.

"Local competition is as strong here as anywhere else in the world," says Mr. Piero Sierra, the newly-appointed president, firmly rebutting suggestions that perhaps the Brazilian market was not as demanding as elsewhere. New products recently launched include the P44 and 70 series tyres designed for the more rugged conditions in Brazil.

Nevertheless, it must be of comfort to Pirelli to know that its turnover is equivalent to that of its nearest two local rivals, Goodyear and Firestone, combined. Michelin, the market leader in Europe, trails a poor fourth.

After several depressed years in the early 1980s when the Brazilian recession dragged down demand and the Government cut back heavily on its electricity transmission and telecommunications programmes, among the major customers for cables—Pirelli is lifting itself up again.

Exports grew strongly between 1982 and 1984, to compensate for the lower domestic demand, rising from \$45.5m to \$94.7m but this year's growth has tapered off, affected by the strength of the US dollar—to which the cruzeiro is linked—in the first half.

Profit levels, according to Mr. Sierra, are reasonably good for the industry, going through depressed times worldwide. In

1985 the bottom line should be "about double" last year's \$60m (translated at the average exchange rate), giving the multi-national a cash pot of a size it has not seen for some time.

Output from its 16 factories scattered around Brazil is running at very near capacity levels in the tyres division, and only marginally less in cables. New investments, of about \$40m to \$50m a year, are thus expected to go largely into plant expansion.

During the recession Pirelli seized the opportunity to make considerable productivity gains, shedding about 30 per cent of its labour force. This came down from nearly 15,500 in 1980 to 11,523 in 1983, though since then it has crept back up again to about 12,000.

Building on the increased market share Pirelli achieved this year across the board and keeping fixed costs down are its president's chief preoccupations. Unfortunately, not all factors are under his control, and the greatest uncertainty is over the erratic way in which government-administered price controls are applied on tyres, at present responsible for 65 per cent of turnover.

Other headaches include the relatively high cost of sea freight from Brazil to major world markets and the recent appreciation by Brasilia of a national "market reserve" on the manufacture of optic fibres, a logical high technology development of Pirelli's existing cables business, a restriction which has left the company disgruntled.

Within the Pirelli group worldwide, the Brazilian subsidiary is said to compare favourably on most counts, particularly in productivity improvements in tyres. Financially it is in good shape, with an excellent debt-to-equity ratio.

There are some danger signals on the near horizon for the Brazilian economic scene. To avoid being blown off course, as Mr. Sierra rightly warns, will require some careful steering of the boat over the months to come.

## BRAZIL 8

### Powerful force for reform

#### The Church

RICHARD FOSTER

MORE THAN 50,000 faithful attended the funeral last month of a former women truck driver with psychic powers who built a remarkable religious centre called Valley of the Dawn 30 miles outside Brasília.

Its faith is based on a syncretic mix of Catholicism, African, pantheism, Eastern mysticism and a belief in the positive healing powers of "cosmic energy".

Ms Neiva Chaves Zelaya, or Aunt Neiva as she came to be called, was a tall, heavy set woman whose experience navigating Brazilian highways gave her a distinctly common touch. Her followers worshipped wearing colourful gowns in a setting that can only suggest a casual visitor's film set from a science fiction spectacular.

Dominating the town is a 40-foot high likeness of the Virgin Mary, a figure merged in Brazil with Iemanjá, the sea goddess of African slaves. Ornamental lakes are cut in triangles and pentagons in an effort to attract the energy flows. Black and white Catholic saints share the attention of worshippers with images of the Buddha, while wall paintings done in a primitive style illustrate popular Brazilian folk tales.

Valley of the Dawn, bizarre, heretical and populist never had any trouble finding legitimacy in the ultra-modern capital. One of Aunt Neiva's advisers from the start was a planning ministry technocrat. Many other followers came from the middle and upper regions of the bureaucracy, finding nothing wrong with the idea of seeking spiritual guidance from a woman of humble origin and popular tastes.

None of this is at all surprising to Brazilians. Recently, a young university student from a sophisticated background became pregnant, suffering shooting pains in her right leg. She immediately sought out a practitioner of a Brazilian form of voodoo, called "Macumba", in order "to receive the spirit" in her womb.

Normally the world's largest Catholic country, Brazil is also a mix of popular faiths which spring spontaneously from a

native spiritualism which resists the strictures and hierarchies of the Vatican. It has also provided fertile ground in recent years for the rapid rise of fundamentalist Protestant and Evangelical sects with fat wallets.

But the Catholic Church and, in particular, its governing body, the National Conference of Brazilian Bishops is an influential force in Brasília, where it scrupulously monitors government social policy, and throughout the country, it has been engaged since the 1980s in land reform, health, nutrition, education and the fate of Brazil's vanishing native Indians.

Silent for five months after the inauguration in March of Brazil's current democratic Government, the CNBB, as it is known by its Portuguese initials, watched carefully as President José Sarney stumbled over promises to popularise government and deliver more services to the poor.

Finally, on November 1, church leaders Dom Ivo Lorscheiter, president of the CNBB, and Dom Luciano Mendes, its secretary-general, sought an audience with the President. When the lengthy meeting was over, Mr Sarney knew he had a long way to go before his broad coalition Government, moving hesitantly in the direction of social reform, would win the unequalled support of the Church.

"The Government is well-intentioned," said Dom Luciano afterwards. "But good intentions are not enough." The CNBB feels the Government must do several things to make its reforms more effective. These include commitments to redistribute large estates to migrant workers and sharecroppers and to involve the poor in a much heralded Constituent Assembly scheduled for late next year.

Short and stoop-shouldered, Dom Luciano, aged 55, an auxiliary bishop in São Paulo, speaks in parables in a patient attempt to explain the philosophical conflicts of church militancy in a poor country where it used to be a pillar of the establishment.

Why has not the Sarney Government and its many convinced liberals satisfied the Church's social hopes? "There hasn't really been a changing of the elites in Brazil. As a

Archbishop Heitor Pessoa Cansian of Olinda and Recife and (right) Cardinal Paulo Evaristo Arns of São Paulo: Brazil's Catholic church has allied itself firmly with the poor.

result President Sarney has so far been unable to co-opt the popular forces. They are still outside the Government—but we think they should be part of the Government."

If this sound like the talk of a Marxist, the Church is more than keenly aware that since the 1978 meeting of Latin American bishops in Puebla, Mexico, Brazil's Catholic Church has allied itself firmly with the poor. As Dom Luciano says, "The Church is for everyone, but preferably for the poor."

Through its "Comunidades de Base", geographically arranged local community structures, the Church has encouraged young priests—a significant proportion of them foreigners—to live among the poor and help organise them politically.

Special pastoral commissions help migrant workers, Indians, pregnant women (although the Church remains ambivalent on birth control), urban workers and even fishermen in poor coastal villages.

Because of this grass roots activity, the Church finds ready allies in the left-wing Workers' Party and in Brazil's various communist splinter groups: an alliance which predictably enrages conservative Catholics.

especially those in the military. General Euclides Figueiredo, head of the National War College and brother of former President José Figueiredo, recently accused Catholic clergy of encouraging landless rural workers to invade large estates.

Officially, the CNBB does not advise such action, but privately many Catholic priests believe greater militancy is required to accelerate the process of land reform promised by President Sarney. A number have taken leading roles in a series of much publicised land grabs.

As to the path which brings Catholics and Communists together, the Church has a clear conscience. According to Father Pedro Celso, formerly a community worker in the Amazon and now a church official in Brasília, "those who choose to help the poor will find themselves, together in many battles."

Dom Luciano asked how the Church differs from the extreme left in Brazil, replies, "I think Marxists would enter from us in that we have a desire to overcome death and to become part of an afterlife."

The Church's mission to assuage the vast majority of Brazilians who lack the basic

necessities of life transcends the CNBB's military role into the only claim of human rights: a country silenced by censorship and the threat of arrest or torture.

Today, except for an occasional policy paper or meeting with the President, the Church has become much less visible. Churchmen say they have sought a high political profile not the function of the Church but of the people. As Dom Luciano said, "Frankly it would be much better if the workers party at the grassroots organised."

Meanwhile, the strongly progressive-minded Brazilian Church has also come under attack from Rome. In a celebrated recent case, one of its leading figures in the Latin American "theology of liberation," Father Leonardo Boff, was condemned to silence by the Vatican.

As for Brazil's mystical, syncretic sects, which command the support of a wide cross-section of the population, Dom Luciano says, "Brazilians may as always be good Catholics, but they are profoundly religious and we see God's hand in this

## Brazil. Paradise of the South Atlantic.

In this vast country of natural beauty, you will discover astonishing vistas and unforgettable ambience where surprise after delightful surprise awaits you.

In the south you will find characteristics and climate often compared to Europe; in the southwest, is Latin America's industrial and cultural center; to the midwest and its 21st century architecture of Brasília in contrast to the exotic Pantanal (wetlands) and miles of white sand beaches; to the northeast, where miles and miles of the amazing Amazon preserves; to the largest forest reserve in the world.

Come and enjoy Brazilian hospitality, exquisite cuisine and find a new you in our paradise.

**VARIG**

A good reason to fly to Brazil.

### Brazil Air Pass The Best Way to Travel Within Brazil.

Varig's modern jets will fly you throughout Brazil at these incredibly low air fares:

First Option: Adult: US\$ 330 - Child: US\$ 165  
Infant: US\$ 33  
In this case you may travel for 21 days with no limit on the number of cities visited.

Second Option: Adult: US\$ 250 - Child: US\$ 125  
Infant: US\$ 25  
This allows you to travel for 14 days to four different cities. Return is permitted, and there will be no limit on the mileage flown or number of trips.

In addition, hotels throughout Brazil offer you a 20% discount. Take advantage of all this and spend your next holiday with us, in the paradise of the South Atlantic.

#### The Arts

RICHARD FOSTER

CARMEN Miranda balancing a pineapple headpiece on a Hollywood set, a Mulatta gyrating to a samba drum, an Amazonian Indian bedecked in parrot plumes, these are the common exotic pictures of Brazil.

Behind the stereotypes, however, there is a distinct Brazilian culture voice which envelops the country. Highly diverse and constantly tapping its African and Portuguese roots, Brazil art in general is noisy, sensual, brash—and often captivating.

The country's films, music, theatre and television reflect the casual spontaneity and energy which is the mark of the Brazilian personality. Linguistically and physically separated from the rest of Latin America and the world, Brazil has been slow to communicate with the globe television network. Only in the past 20 years has Brazilian art begun to seep out of the country.

Much of this has to do with underdevelopment. A country with few resources can hardly project much. But as Brazil's wealth and industry have grown, so have its powers of international communication.

Any Mexican has now heard of Roberto Carlos and Nelson Ned, two Brazilian romantic singers who record in both Spanish and Portuguese. The Brazilian "telenovela", or television soap opera, as extravagantly and brilliantly produced by the Globo television network, has begun in recent years to be exported around the world.

A Brazilian-made film, "The Kiss of the Spider Woman", based on the Argentine novel by Manuel Puig and starring William Hurt and Sonia Braga is currently playing across the US in 250 cinemas, and will shortly be in Britain at the London Film Festival.

In recent years other Brazilian films have also begun to introduce the country to foreign audiences. "Dona Flor and her two husbands" recaptured the Jorge Amado novel about a Bahian widow whose

vagrant and libidinous late husband came back to haunt a more staid second marriage with a pharmacist, Sonia Braga, an unusually beautiful and talented actress, also starred in this film, which was well received by foreign critics.

"Bye, Bye Brazil" followed a troupe of vaudeville performers around the interior of Brazil, showing foreign audiences a lot

The popularity of singer-composer Milton Nascimento is based on a mixture of modern poetic lyrics and traditional music forms—a response in the mid-1960s to the austerity of military rule and the invasion of foreign rock.

of poverty and local colour. "Pírate", directed by Hector Babenco, an Argentine who has lived in São Paulo for 15 years, told the story of an abandoned "Favela", or shanty town, boy befriended by a prostitute. All these films went to show the commercial viability of at least some of the 80 or so films produced yearly in Brazil.

Whatever progress that has been made in international communication has not been easy. One of the country's most beloved singer-composers, Gilberto Gil, touring West Germany in 1978, tried to communicate by singing in English and was booed by university students. In mid-November in São Paulo, however, he was the centre of attraction at a music festival to commemorate his 20 years in show business.

Foreign success and acclaim has come easier to others. Bahian writer Jorge Amado's novels are widely translated, and Mr Amado is usually placed in the hallowed company of other well-known Latin American writers such as Gabriel Garcia Marquez, Alejo Carpentier and Jorge Luis Borges.

Brazilian writers of a younger generation have recently benefited from a boom in which South American talent is actively recruited by literary agents in the US and Europe.

Marcio de Souza, a native of Manaus, has had several of his novels translated, most notably "Galvez the emperor of Acre," a tongue-in-cheek chronicle of the life and times of a local political boss.

Musically, most who have had the good fortune to hear it, especially live, admit Brazil is a powerhouse. There is the samba of course, and all its glory in the streets of Rio and other cities around Carnival in February or March. In the north-east, meanwhile, another distinctive traditional musical form called "Forró" is an accelerated folk-rhythm played with accordion, drum and triangle.

Intriguingly, the distinguished Brazilian social chronicler Gilberto Freyre says that the word "Forró" is a corruption of the English "for all". He tells the story that an English company in the north-east announced an open house party "for all" its employees—and the name stuck.

In Rio de Janeiro in the mid-1960s, a guitarist named Joao Gilberto invented the "Bossa Nova," a jazz-samba rhythm that quickly infected Rio as well as New York and became one of Brazil's best known cultural contributions abroad.

Out of this movement came the pianist-composer Tom Jobim and his lyricist, the late Vinícius de Moraes. The lilting, drowsy strains of "The Girl from Ipanema" (a chic Rio beach suburb) and half a dozen other Jobim-Moraes creations continue to get played on radio stations around the world.

At about the same time as the Bossa Nova was created, Gilberto Gil started the "Tropicalismo" movement, in response both to the austerity of military rule and the invasion

of foreign rock. In the san- cepted singer-composer Chico Buarque, Milton Nas- mento and Caetano Velos which mixed modern poet- lyrics with traditional mus- forms, winning the hearts of the young.

Mr Nascimento, a black singer, took the baroque music traditions of his native Minas Gerais, creating a distinctive fusion of church and chor music with jazz. Chico Buarque wrote between the lines in his lyrics, creating secret channels of communication the military missed.

The civilian Government which came to power in March created for the first time a post of Minister of Culture, emphasizing the more human socialising face of the regime. But everyone would agree that the real Minister of Culture without portfolio is Brazil's Mr Roberto Marinho, the owner and founder of the Globo television network.

Globo, the fourth largest commercial television network in the world, regularly commands more than a 70 per cent share of a viewing audience of 80m.

Over the past two decades Globo has perfected a "Brazilian arts form," the "Telenovela," consisting of how- ever, episodes shown six times a week in prime time over a period of six months.

With that much footage Globo directors do more than enough justice to the best of Brazilian scripts, many of them literary classics such as José Amado's "Gabriella, Clove and Cinnamon."

Although it has the advantage of much lower production costs than its foreign rival, Globo attacks its subject matter with the thoroughness and extravagance of the US mini-series, BBC and ITV.

One current hit "Rogério Santeiro" tells the hilarious story of a saint who has come back to life in a small Brazilian town, mixing humour with social commentary. Capturing the available audience in mass of the country, "Rogério Santeiro" has succeeded in bringing all other social events to a standstill during its night transmission.

Not satisfied with direct exports, the Marinho Organisation this year bought a television station in Monaco, which is expected to be used as a base for reaching a large audience in Italy and France. Globo productions, meanwhile, are already being seen in most European countries, including the UK, Portugal and Italy.

## MBB doubts benefits of motor industry link

BY JOHN DAVIES IN FRANKFURT

THE TOP management of Messerschmitt-Bölkow-Blohm (MBB), the West German aerospace group, has cast doubt on whether the world's aerospace industry will gain from links with motor vehicle companies.

MBB has been the subject of much speculation in recent months, because of suggestions in Bavaria about BMW, the car maker, taking a stake in the aerospace group.

Mr Hanns Vogels, MBB's chief executive, referring to the takeover of Hughes Aircraft by General Motors in the US, remarked that he could not yet see any benefits for the US space industry from common technological interests with the motor industry.

Mr Vogels indicated that MBB aimed to work more closely with its European partners in aviation,

space and defence manufacturing, because of strong international competition. MBB intended to build up its micro-electronic design capabilities, but also planned co-operation with West German and other European partners in electronics.

MBB, which is not traded on the stock exchange, is owned by a cluster of industrial and financial groups, the state governments of Bavaria, Hamburg and Bremen and founding families.

Bavarian politicians and government officials have been making inquiries as to whether BMW and MBB - both of which have their headquarters in the state - would benefit if BMW bought into the aerospace company. The idea has local appeal because it might lead to a stronger Bavarian counterweight to Daimler-Benz, the Stuttgart-based motor vehicle group, which has expanded its high-tech technology interests through a series of takeovers this year.

One of Daimler's moves was to acquire 65.3 per cent of Dornier, the light aircraft maker and high-tech research group.

When asked about speculation that Dornier might take a stake in the Airbus airliner project, Mr Vogels said due regard would be given to Dornier in Airbus work. He pointed out that Dornier, unlike MBB, had not experienced the difficult years of the Airbus project.

MBB is a partner in the international consortium which makes the Airbus. Mr Vogels said the Airbus business should break even next year and production step up in the years ahead.

BANKS MAY TAKE CONTROL OF DUTCH CONSTRUCTION COMPANY

## Boskalis dredges up rescue plan

BY LAURA RAUN IN AMSTERDAM

THE SURVIVAL of Royal Boskalis Westminster is in the balance as shareholders gather to consider a drastic rescue plan for the Dutch dredging and construction company.

Boskalis shareholders are to decide whether to accept proposals to spin off all the loss-making activities into a trust and leave only the relatively healthy dredging operations in the holding company. The company's £1.3bn (\$461m) of debt would be converted into equity, banks would gain control of 75 per cent of the capital and the nominal value of outstanding shares would be halved.

The plan is likely to be accepted, if only because the alternative is bankruptcy. The company has lost £1.501m in the past two years and Boskalis's 15-month debt moratorium has begun to try the patience of its 53 creditor banks.

Boskalis has foundered because of difficulties on huge projects that

Boskalis forecast yesterday that turnover for 1985 would show a decline of around a third to about £1 600m, and that a further operating loss "could not be ruled out".

went wrong in debt-plagued countries such as Argentina, Nigeria and Algeria. Ambitious construction and pipeline projects that looked promising to Boskalis and its bankers a few years ago turned sour.

If the sweeping reorganisation goes through, it would be the first time in Dutch history that banks effectively have taken control of a company, says Mr Tom Abbot of Bankers Trust, a chief architect of the rescue plan. "The whole complicated affair is an exercise in preventing further unnecessary capital destruction for all stakeholders. The banks aren't falling over one

by Argentina for a 2,000 km natural gas pipeline, the Centro-Oeste gas project (Cogasco), which was built for Gas del Estado, the state gas company. Next most promising is recovery of £1 105m in receivables from Nigeria for dredging, reclamation and the "Lagoon City" project. Proceeds above £1 250m would be distributed to all shareholders, both common and preferred.

Meanwhile, all previously issued capital would be written down by half to £1 17m. The holding company would be left only with dredging activities, although Boskalis still has among the most modern and flexible fleets in the world, particularly in maintenance work. However, the worldwide dredging market remains severely depressed by overcapacity.

The dredging operations made a meagre £1 4m profit last year and business has been hurt by the uncertainty over Boskalis.

## IMC pays \$675m for Avon division

By William Hall in New York

INTERNATIONAL Minerals and Chemical Corporation (IMC), the big US fertiliser concern, is paying \$675m for the Mallinckrodt division of Avon Products in a major move outside its traditional agricultural base.

IMC, which earlier this week forecast sharply lower earnings for its current year because of the impact of US agricultural problems on fertiliser demand, had annual sales of \$1.6bn and net income of \$119.6m in the year to June 30 1985. Mallinckrodt, which produces medical supplies and special chemicals, had sales of \$840m and pre-tax operating profits of \$81.9m in its last financial year.

Avon bought Mallinckrodt for \$711m in 1982 and announced that it was putting the company up for sale last September because it did not "fit with Avon's strategic direction." Avon said that the divestiture was part of its strategy to concentrate on consumer products and to expand its health care services business. It sold Tiffany & Co the jewellery store last year and says that the Mallinckrodt sale will substantially complete its divestiture programme.

Mr George Kennedy, IMC chief executive, said yesterday that the acquisition of Mallinckrodt was part of IMC's long-term strategy to broaden sources of income beyond its agricultural businesses. He added that Mallinckrodt's leading market position in medical products and laboratory equipment and its strong overall technical capability in special chemicals, flavours, fragrances and cosmetic chemicals, would enhance IMC's current research and development.

IMC is one of the world's largest producers of nutrients for crops and animal agriculture. The company's profits peaked five years ago when it earned \$5.63 a share. Last year the figure was \$4.39 a share.

## Ericsson US chief replaced in management shake-up

BY KEVIN DONE IN STOCKHOLM

MR HAKAN LEDIN, chief executive of Ericsson, the troubled US subsidiary of the Swedish telecommunications and electronics concern, is to be replaced by a local American appointment as part of a continuing shake-up of Ericsson top management.

Ericsson, one of the world's leading telecommunications groups, has run into problems with its drive into the office information systems market and with its strategic move into the US information and telecommunications markets, where it has run up heavy losses.

The group as a whole reported a loss of SKr 135.6m (\$17.6m) in the third quarter of 1985 and an-

nounced that profits for the full year would be halved to around SKr 800m compared with SKr 1.57bn in 1984.

Mr Gundor Rentsch, responsible for the information systems sector within Ericsson, is also leaving the company.

Until autumn last year Mr Ledin, earlier a candidate for the post of group chief executive, was one of the most powerful members of Ericsson group management. He was head of information systems

to expand from telecommunications into the office business systems market and he led the acquisitions of Datasab, the Swedish data terminals and minicomputer company, and Facit, which makes printers and typewriters.

The merger of these two companies with Ericsson's existing allied operations has gone badly, however. The information systems business area made operating losses of SKr 217m last year and further big losses have been announced for 1985.

Mr Ledin is to be replaced as president of Ericsson by Mr Björn Svendsberg, Ericsson group chief executive.

## Macy bid reduced by \$2 a share

BY TERRY DODSWORTH IN NEW YORK

THE BID for R.H. Macy, the New York department store, was lowered by \$3 a share yesterday after the top management takeover team conceded it could not raise the necessary finance to complete the original \$70 a share offer.

The new \$67 a share all-cash bid, which values Macy at \$3.5bn, was accompanied by a statement indicating that the revised financial arrangements are well under way.

Goldman Sachs, the investment

bank which is co-ordinating the buy-out, said that it was "highly confident that the required financing could be arranged" - terminology which is generally used on Wall Street to show that institutional investors will back a deal.

At the same time, the management team, led by Mr Edward Finkelstein, chairman of the group, said that it had received letters from two large banks, Citibank and Manufacturers Hanover Trust, stat-

ing that they would provide a portion of the financing and form a syndicate to provide additional funds.

Indications that the original takeover proposal had hit a snag emerged at the beginning of this month. The institutions and banks who normally back buy-outs, in which managements borrow money secured on their own company's assets, apparently concluded that the price being offered was too high.

## Couple sue Texaco board

A RETIRED Texaco employee and his wife, owners of 1,100 Texaco shares, are suing the company's chairman, its board of directors and Goldman Sachs, the US investment bank, claiming they breached their fiduciary duties by failing to negotiate a settlement of the oil company's \$11bn dispute with Pennzoil, Reuter reports from Houston.

Mr C.J. and Mrs Dorothy Kirk are seeking damages to be returned to Texaco.

Pennzoil was awarded \$10.5bn damages on November 19 after claiming Texaco acquired Getty Oil despite an agreement for Pennzoil to acquire Getty.

## Chinese TV demand helps Sony to improve

BY OUR FINANCIAL STAFF

SONY, the Japanese consumer electronics group, managed a 2.2 per cent improvement in consolidated net profits for the year to October, as a marked slowdown in exports to the US was offset by continuing strong demand for television sets in China.

After-tax earnings reached ¥75,020m (\$539.4m), on sales which at ¥1,420.9bn were ahead by 12.6 per cent.

These results from the company and its subsidiaries masked a stronger showing by the parent

alone, figures for which were also released yesterday.

On this basis, pre-tax profits were 13.1 per cent higher at ¥91.03bn, and net earnings jumped 39.7 per cent to ¥48.96bn, on turnover, which was 17.5 per cent higher at ¥1,971.4bn.

Growth in the current year is expected to be restrained by the "sharp appreciation of the yen and continuing intense price competition in world markets," Sony said. It described demand from the US and China as "uncertain."

## Mitel hit by tighter margins on switches

By Bernard Simon in Toronto

MITEL, the Canadian telecommunications equipment manufacturer, increased its losses to C\$14m (US\$10m), or 40 cents a share, after extraordinary items, in the 13 weeks to November 22, from C\$4.3m, or 17 cents a share, a year earlier.

Sales advanced from C\$98.1m to C\$107.7m.

The company, in which British Telecom has proposed buying a 51 per cent interest, lost C\$45.7m in the first nine months of the current fiscal year, up from C\$32.2m last year. Revenues rose by 13 per cent to C\$296.4m.

The latest results include a C\$11.8m provision for "inventory obsolescence." Mitel said the provision was needed to reflect a decline in projected sales forecasts for items such as semiconductor components. Its major switching product lines are not involved.

On the other hand, the company posted a C\$8.6m gain from the proceeds of a public share offer two years ago by its 70 per cent-owned subsidiary Trillium Telephones.

## Prices weaken in Eurodollar market

BY MAGGIE URRY IN LONDON

EURODOLLAR bonds were slightly weaker where changed yesterday, although larger falls in the New York market meant that yield margins relative to US Treasury bonds narrowed slightly. Activity in the Eurobonds market is now largely confined to Christmas parties, with trading at a low ebb.

The expected European issue was launched for Credit Foncier de France, the housing and construction financing agency guaranteed by the republic. The ¥15bn 10 year issue has a 6 per cent coupon with an issue price of 101.1. Daiwa Eu-

BNP Bank bond average			
Dec 19	1985	Previous	Low
104.927		105.003	
105.593			99.840

rope is lead manager and fees totalled 2 per cent. Traders said no price in the issue was quoted by the bond brokers.

Kleinwort Benson fixed the coupon for Smith & Nephew's \$80m convertible issue at 5 1/2 per cent, the top end of the indicated range. The

conversion price was set at 218p, a 6.34 per cent premium to the previous closing price.

No new issues were launched in the D-Mark market, while in the secondary market prices were unchanged to slightly weaker in low turnover. The World Bank 30-year zero-coupon issue continued to attract demand and the price rose by 1/2 point to 15 1/2 compared with the 13 issue price.

In the Swiss franc foreign bond market SBC cut the yield for Korea Export Import Bank's Sfr 50m

eight-year issue from the indicated 6 1/2 per cent to 6 1/4, with issue price set at par. Good demand has been seen for the bonds.

In the secondary market prices were firmer by around 1/4 point on average. Demand centred on higher coupon issues, and the market was active.

Shearson Lehman Brothers International has added more traders to its non-dollar bond team, to bring the total to nine. The latest recruits are Robert Hickling and Jonathan Hipson, who will trade yen bonds. They were with County Bank.

## C&G seeks £125m

CHELTHAM and Gloucester Building Society has arranged a £125m, five-year credit believed to be the largest such deal yet arranged publicly by a British building society, writes Peter Montague in London.

The credit was increased from an initial £75m, despite its fine terms, which include an interest margin of 1/2 per cent over money-market rates. Participating banks will absorb the cost of reserve-asset requirements up to 10 basis points.

The deal is part of a spate of borrowings by building societies in the international capital markets.

This announcement appears as a matter of record only. These Securities have not been registered under the United States Securities Act of 1933 and may not be sold or delivered directly or indirectly, in the United States or to United States persons.

## INTL. COMPANIES & FINANCE

### SIA share price tumbles further

BY CHRIS SHERWELL IN SINGAPORE

THE PRICE of Singapore International Airlines (SIA) shares continued to tumble yesterday, the second day of trading on the Singapore Stock Exchange. The shares hit a low of S\$4.20 before tumbling back in the last hour of trading to S\$4.44, still a loss of 26 cents on the day.

The plunge in the shares, 100m of which were issued last month at a price of S\$5, shocked those who previously bought in the "grey market" at prices of up to S\$8. Brokers said one foreign institution believed to be Hong Kong-based, tried unsuccessfully to renege on its purchase commitment in order to avoid losses amounting to millions of dollars.

For other institutions which bought the 40m shares privately

placed in London, New York and Tokyo, the trend is particularly galling because they are barred under the regulations of the issue from selling the paper for 120 days.

A key problem is the general decline in the market in the wake of the Pan-Elctric affair, which saw the exchange close for three days earlier this month because of fears that several brokers would be crushed by a chain of defaults on forward share purchase contracts.

Nervousness plainly persists in Singapore and the widely-watched Straits Times index of 30 industrial stocks fell back 18.71 points yesterday to 604.15. This well below the 608.54 level hit on the day the Singapore exchange re-opened, when it plunged 82 points before

temporarily rallying, and the psychological 600 barrier is now in danger of being breached.

A second problem as far as the SIA issue is concerned is the vast number of shares overhanging the market. Apart from the 100m issued last month, another 130m lie in the hands of SIA employees.

Many of these workers may now want to realise, while they can, the handsome profit the issue still offers them. None paid more than the equivalent of S\$2.55 each for their shares, and a now-lapsed buy-out arrangement prior to the public issue offered them S\$4.575.

SIA itself would not comment yesterday on the fall in price, but DBS Bank, the lead underwriter in Singapore, issued a statement saying the perform-

ance was "not unexpected given the prevailing nervous sentiment surrounding the market." The price, it insisted, had held up "relatively well," and institutional buying "helped explain the rebound later in the day."

In fact DBS Bank acknowledged that it was in the market itself, in its capacity as an institutional fund manager, prompting suggestions that it was deliberately trying to support the price. Genuine buying interest was also likely, however, and other blue-chips also recovered a portion of losses suffered earlier in the day.

Either way, SIA was the most heavily-traded stock, with a volume of almost 3m shares traded. The comparable figure on Wednesday was 3.55m.

### Malaysian stockbrokers set for shake-up

BY WONG SULONG IN KUALA LUMPUR

A MAJOR shake-up of the Malaysian stockbroking industry is imminent, according to bankers and brokers in Kuala Lumpur. Several stockbroking firms — facing liquidity problems because of forward contracts — are expected to be restructured and taken over by the banks, or will be suspended and probably allowed to collapse.

Three interrelated developments are dictating the impending shake-up of the securities industry:

● It is understood that about five or six of the country's 51 stockbroking firms are exposed up to as much as 300m Ringgit (\$125m) in forward contracts, mainly related to Mr Tan Koon Swan's group of companies. At least one firm is known to have dishonoured its forward contracts.

These companies have been given until Monday to sort out their problems, failing which the Kuala Lumpur Stock Exchange (KLSE) will start investigations, and probably have them suspended.

● The Malaysian Government is expected within the next two weeks to open the way for commercial and merchant banks to buy majority control of broking firms, as part of attempts to boost public confidence.

● The election of Mr NIK Mohamed Din as the new KLSE chairman last weekend is seen as heralding a more aggressive approach by the KLSE towards errant members. The new KLSE committee is expected to push

for closer monitoring of the financial health of its members and demand greater disclosure of information.

Those commercial banks which are to be given permission to buy majority control in broking firms are Development and Commercial Bank, Malayan Banking, Bank Bumiputera, Public Bank, United Asian Bank, and United Malayan Banking.

Either way, the merchant banks are Arab Malaysian International, and Permata Chartered.

### Israeli builder in receivership

By Lynne Richardson in Tel Aviv

CLARIN DIROT, one of Israel's largest privately owned building contractors, has been placed in the hands of a temporary receiver.

The company is believed to have debts in the region of US\$15m and work at a number of its sites has been delegated to supervisors appointed by the Tel Aviv District Court.

Under construction are a number of private housing estates and a timeshare hotel in Eilat, on the Red Sea. A similar project, Tiberies Club Hotel, on the shores of the Sea of Galilee is already completed.

The managers of Clarin, all members of the Mathov family, were forbidden by the court from leaving the country. Their lawyer said they did not appear in court because their lives had been threatened.

Clarin is not quoted on the Tel Aviv Stock Exchange and officially it employs only 150, but many of Israel's construction workers are unregistered casual labourers.

### Swraj Paul wins legal round

BY JOHN ELLIOTT IN NEW DELHI

TWO New Delhi companies suffered a setback in India's Supreme Court yesterday in their two-year-old battle to ward off a possible takeover of management control by Mr Swraj Paul, an Indian-born businessman who runs the Caparo group in London and was a close confidant of Mrs Indira Gandhi, the late Indian Prime Minister.

Minority stakes in the two — Escorts and DCM (formerly Delhi Cloth Mills) — were bought nearly three years ago by Mr Paul together with his brothers in India who run the

Calcutta-based Apeejay group. But the shares have not been registered by the companies, where family managements fear a potential takeover.

The court overruled a Bombay High Court judgment of November last year. This had said that the Reserve Bank of India should not have approved Caparo's purchase of the shares and that the government-owned Life Insurance Corporation of India, which has a major stake in Escorts, should not last year have called an extraordinary general meeting of Escorts to change nine non-executive directors.

The Supreme Court judgment came as a relief yesterday for the Indian Government which otherwise might have had to consider strengthening the powers of both the Reserve Bank and state-owned financial institutions.

The court refrained, however, from issuing a final ruling on the ownership of the shares to Paul and his family. Instead it said the Reserve Bank should launch a full inquiry into the purchase of the shares in Escorts, which is being regarded as a test case.

### Strong exports boost Mazda Motor

MAZDA MOTOR, Japan's third largest car maker, lifted parent company pre-tax profits 27.6 per cent to ¥71,020m (\$49.5m) in the year to October, helped by strong exports to the U.S., writes Yoko Shibata in Tokyo.

Net profits came out at ¥31.17bn, up 5 per cent, on sales of ¥1,569.55bn, ahead by 9.6 per cent. The dividend was raised by ¥0.50 to ¥7.5 for the year.

For the current year, Mazda expects to sell a record 1.4m vehicles, an increase of 6.1 per cent, unlike other makers such as Toyota or Nissan.

However, variations in the yen's exchange rate are putting its export profitability at risk, a factor which is not expected to be covered by a mark-up in selling prices. As a result, Mazda foresees a 20 per cent drop in pre-tax profits to ¥55bn, the first fall in 11 years.

## UK COMPANY NEWS

## GrandMet rise beats City forecast

Grand Metropolitan yesterday beat analysts' forecasts when it announced a 13.1m increase in full-year profits — contrary to widespread expectations of a slightly lower or unchanged result.

The shares initially responded with a 27p surge to 392p before closing at 380p, placing a value of £30n on the brewing, hotels, and leisure group.

At £347.3m pre-tax, against £304.3m the result largely reflected increased contributions from UK consumer services and foods operations and from the international side, encompassing hotels and wines and spirits.

These gains comfortably offset a 58m decline to £54.3m in trading profits from US consumer products, which has been mainly attributed by GrandMet to aggressive price competition in the market for generic and private label cigarettes.

This problem was the main cause of a 10 per cent decline in GrandMet's interim profits and led to a cautious statement on the chairman, Mr Stanley Grinstead. Profits over the previous five years had more than doubled. GrandMet's year to end-September 1985 also featured an active acquisition and disposal programme. Some £365m was spent on acquiring Pearle

Health Services, America's largest retailer of eyecare products, and £134m on Quality Care, an operator of home nursing services.

On the disposal front, the Pinkerton Tobacco Company was sold for \$137.5m and in the past month GrandMet has sold Mecca Leisure and Warner Holidays for \$95m and the Brazilian Tobacco Company, part of Liggett & Myers, for \$28m.

GrandMet is still anxious to sell the remaining Liggett & Myers business but Mr Grinstead rejects speculation that the hotels side could be sold. It is one of the group's "core activities" and offers better than average growth, he says.

The Mecca Leisure disposal has helped further to reduce debt, which fell from £1.5bn to £1.2bn in the year, and to 51 per cent during the year on shareholders' funds from £1.75bn to just under £2bn.

On a divisional basis, he says that UK brewing, which mainly comprises Watney Mann & Traction Breweries one of the country's top six, achieved a further trading profit increase of £2.2m to £3.7m despite poor weather at home and £2m drop in profits from the Stern brewery in West Germany. UK consumer services netched up a near 12 per cent rise to

£75.3m with a higher contribution from licensed retailing activities and satisfactory progress in bookmaking and leisure. Earnings from the London casinos, however, were affected by competition and were down from £1.1m to £0.7m. The food business, which contributed £11.2m more at £27.6m benefited from action taken to align it more closely to its markets.

In addition to the Liggett & Myers downturn—profits fell from £50m to a marginal level—US results were also depressed by a lower demand level for fitness equipment. Sterling translation of US results benefited from a lower average rate of £1.94 against \$1.38m—overall, currency movements gave GrandMet a net gain of £10m.

On the international side, hotels raised profits from £31.5m to £37.6m with a continued high demand level for accommodation in Europe. Wines and spirits, which contributed £20.3m more at £149.8m, confirmed its position as world leader by continuing to build volumes both in the US and other principal markets.

Total group turnover advanced from £5.08bn to £5.59bn generating trading profits of £453.2m against £448m. Interest costs were £3.7m lower at £105.9m.

GrandMet also showed a significant improvement below the line with tax down in both absolute and percentage terms from £95.1m to £76.4m and a £30.1m swing to extraordinary credits of £3.5m as retained profits were £61.1m higher at £27.1m.

Earnings per share rose 2.6p to 35p, comfortably covering an increased dividend total of 10p (9.2p) with the final up 0.5p to 6p.

See Lex

## Superdrug 25% ahead after nine months

Superdrug Stores continued its pattern of unanticipated growth in the third quarter and for the period saw its profits before tax rise by 16.5 per cent.

Including an additional chain of pre-Christmas trading profits for the quarter rose from £2.57m to £2.99m and lifted the nine-month total to £17.76m, an improvement of 24.5 per cent over last year's £14.23m.

Turnover for the nine months to November 30 pushed ahead from £91.53m to £115.87m, excluding VAT, with the third quarter contribution up by £9.91m at £42.97m—the group, based at Croydon, Surrey, operates a chain of retail drug stores.

Trading profits for the nine months improved from £5.94m to £7.5m before taking in net interest income of £255.09m, against £250.09m.

Tax took £1.23m more at £3.1m and left attributable profits £400,000 lower at £4.66m. The charge for UK corporation tax was at the rate expected to apply for the year as a whole after taking account of estimated capital allowances.

The directors raised the net interim dividend from 1.7p to 2p at six months when pre-tax profits were showing a rise of £1.1m at £4.7m. A final of 2.5p was paid for the 1984-85 period of 63 weeks when pre-tax profits reached £2.74m (£2.94m, 52 weeks).

As the last full period covered 52 weeks, profits of the quarterly results in the current year was changed and gave the third quarter the benefit of an additional week's sales.

Superdrug's third-quarter results were not quite up to its usual weekend standards. Stripping out the flattening effects of an extra week of Christmas sales, volume growth from existing stores was only 5 per cent, compared with over 8 per cent in the first half. The reason seems to be that new openings (of which there were 17 in the third quarter) have been concentrated in areas near to existing stores, hampering their performance somewhat. However, this does not mean that Superdrug is running out of new places in which to duplicate its successful budget formula. There is still plenty of scope for further expansion in the North, and last quarter the first stores in Scotland opened with a bang.

The shares have had a rather dull time recently, mainly in anticipation of lower earnings this year as the tax rate leaps from 40 to 46 per cent. Even at 46p, down from a peak of over 50p, the shares are on a p/e of 26 assuming profits of £10.1m this year. While Superdrug's superior growth prospects justify a high rating, the shares could fall a bit and still be at a good premium to the sector.

## Westland suffers losses of over £95m at year-end

BY LIONEL BARBER

UNDER THE capital reconstruction of Westland, Britain's ailing helicopter manufacturer, the company's two new partners, United Technologies and Fiat, will invest £20m in return for a 29.9 per cent equity stake, it was announced yesterday.

UTC and Fiat will have an option to invest a further £19.1m of new funds which would lift their stake to 39.9 per cent.

Westland's bankers have agreed to convert £28m of current debt into convertible and non-convertible preference shares capital. Ordinary shareholders are invited to take part in a two-for-five rights issue at 60p per share to raise a total of £14.2m.

Westland had trading profits of £11.3m against £18.8m, but incurred a loss before tax and after exceptional items of £106.6m for the year ended last September of £95.3m. The loss attributable to shareholders was £95.7m (Westland's enlarged share capital).

The banks have agreed to convert £28m of outstanding debt into £7m of 10 per cent cumulative redeemable preference shares and £21m of 10 per cent ordinary shares. The option will not be exercised if it results in UTC, together with Fiat, controlling more than 39.9 per cent of Westland's enlarged share capital.

The banks have agreed to convert £28m of outstanding debt into £7m of 10 per cent cumulative redeemable preference shares and £21m of 10 per cent ordinary shares. The option will not be exercised if it results in UTC, together with Fiat, controlling more than 39.9 per cent of Westland's enlarged share capital.

## LMS improves to £8.3m at six months

PRE-TAX profits of London Merchant Securities showed an improvement of 11 per cent at the six months stage and are continuing the upward trend in the second half.

However, the dollar exchange rate and the level of oil and gas prices will have some bearing on the final outcome.

The first six months, to September 30, saw net rental income rise from £5.68m to £6.31m and profits from oil and gas rise by £610,000 to £4.36m.

Group pre-tax profits came through £797,000 ahead at £3.32m after taking account of a £1.49m drop to £1.26m in investment income and interest charges, which fell from £2.38m to £2.77m.

Administration expenses were little changed at £1.45m (£1.5m). Lord Rayne, the chairman, says income from investment properties and trading profits in all areas of activity continued to improve although further investment in related companies, property development and energy interests resulted in

lower earnings from short-term deposits.

He adds that rent reviews contributed to the increase in net rental income and tells shareholders that the company is continuing and will be enhanced in the second six months when revenue from The Angel Centre commences.

LMS, an investment holding group and a subsidiary of Westpool Investment Trust, is lifting its net interim dividend from 0.7p to 0.75p on earnings of 2.27p, down from 2.6p.

Tax accounted for £3.76m (£1.99m) and minorities for £936,000 (£751,000).

Attributable earnings came through at £3.62m, compared with a previous £4.78m.

The overall results take in those of the associates. Here, Century Power and Light maintained its profits contribution but is unlikely to sustain the same level for the full year. First Leisure, however, had an excellent first half indicating

that its full year should show a significant improvement.

● **comment**

No sooner does one thing go right for London Merchant Securities, but something else starts to go wrong. The big coup this year has been the letting to British Telecom of the Angel Centre in Islington.

Although rent will not start coming in until the second half, the first half benefited by about £600,000, as LMS has paid no rates on the property since April when the deal was signed. Meanwhile, matters at Century Power and Light have taken a turn for the worse. As expected, output from the Maureen field has peaked, and profits will start to decline from now on. In the meantime Century's contribution has led to a leap in the tax rate from 27 to 46 per cent, resulting in a slump in earnings. The contribution from the seasonal First Leisure was up, while losses at Multimedia (which amounted to over £1m last year)

have been reduced and the company should start making profits by 1988-87. LMS's shares have failed to regain the zip given them when the Angel deal was signed, and at yesterday's price of 70p, down 3p, stood well short of the year's high. The chances of a strong rebound are slender as long as the oil price continues in retreat.

● **comment**

Superdrug's third-quarter results were not quite up to its usual weekend standards. Stripping out the flattening effects of an extra week of Christmas sales, volume growth from existing stores was only 5 per cent, compared with over 8 per cent in the first half. The reason seems to be that new openings (of which there were 17 in the third quarter) have been concentrated in areas near to existing stores, hampering their performance somewhat. However, this does not mean that Superdrug is running out of new places in which to duplicate its successful budget formula. There is still plenty of scope for further expansion in the North, and last quarter the first stores in Scotland opened with a bang.

The shares have had a rather dull time recently, mainly in anticipation of lower earnings this year as the tax rate leaps from 40 to 46 per cent. Even at 46p, down from a peak of over 50p, the shares are on a p/e of 26 assuming profits of £10.1m this year. While Superdrug's superior growth prospects justify a high rating, the shares could fall a bit and still be at a good premium to the sector.

There is still plenty of scope for further expansion in the North, and last quarter the first stores in Scotland opened with a bang.

The shares have had a rather dull time recently, mainly in anticipation of lower earnings this year as the tax rate leaps from 40 to 46 per cent. Even at 46p, down from a peak of over 50p, the shares are on a p/e of 26 assuming profits of £10.1m this year. While Superdrug's superior growth prospects justify a high rating, the shares could fall a bit and still be at a good premium to the sector.

Superdrug's third-quarter results were not quite up to its usual weekend standards. Stripping out the flattening effects of an extra week of Christmas sales, volume growth from existing stores was only 5 per cent, compared with over 8 per cent in the first half. The reason seems to be that new openings (of which there were 17 in the third quarter) have been concentrated in areas near to existing stores, hampering their performance somewhat. However, this does not mean that Superdrug is running out of new places in which to duplicate its successful budget formula. There is still plenty of scope for further expansion in the North, and last quarter the first stores in Scotland opened with a bang.

## UK COMPANY NEWS

## Pyke holders opt for Glen tender

BY FRANK KANE

Pyke Holdings' shareholders have rejected the advice of their board in large numbers, and have decided to accept the tender offer for shares by Glen International, the unorthodox financial services company headed by Mr Terry Ramsden.

It was announced yesterday that the offer had been accepted by 25.5 per cent of shareholders—well above the 16.9 per cent ceiling that Glen set in its 440p share terms. This is the third tender offer for shares this year, but the first to achieve its goal.

Glen's large holding leaves the agreed bid between Pyke and Hilldown Holdings, the fast growing food, furniture and office equipment group, in a state of some confusion. The Pyke board has strongly opposed Glen's intervention in the bid, and warned that a large level of acceptances would jeopardise its outcome.

Pyke, advised by merchant bank Laurie Milbank, said last night that the ball was very firmly in Hilldown's court. The first closing date for acceptance of the recommended offer is January 6, but Hilldown has indicated that it would require 90 per cent acceptances in order to go unconditional. That figure is now beyond it, but it could lower the threshold to 80 per cent under the Takeover Code.

Mr Harry Solomon, joint chairman of Hilldown, said "our offer is still on the table. We'll have to wait and see what happens on January 6. He did not entirely rule out the prospect of an increase in the offer terms, saying "we have always said that we will only pay what we feel is the right price." Pyke closed last night at 387p unchanged, still below the value of the Hilldown offer.

Mr Ramsden said that results of the tender demonstrated that "as has been indicated, Pyke holders are not satisfied with the Hilldown terms, which undervalue their company. We are not concerned if Hilldown's bid lapses as we have every confidence in Pyke's management." It is understood that Mr Ramsden has been interested for some time in the company.

Glen received a total of 1.17m acceptances for its offer, representing around 25.5 per cent of Pyke's share capital. As this is above the "stated maximum," successful tenders will be scaled down to 66.5 per cent.

## Aspinall up 42% despite drop on gaming side

HIGHER GAMING licence duty and operating costs have resulted in a small drop in profits in the gaming activities of Aspinall Holdings, USM-quoted casino operator and investment group.

However, with its substantially higher profit of £7.11m (22.44m) from gaming, the pre-tax profit for the year ended September 30 1985 emerged 42 per cent ahead at £15.56m against £10.96m.

The directors are proposing to double the single dividend to 8p, which will absorb £2.12m. Statutory net earnings per 10p share were up from 12.9p to 15p.

They say it has been another successful year for gaming in London, with the drop in the value of chips purchased, at £146.44m, compared with £96.01m. The "luck" factor, they say, was in the punter's favour, with the gross gaming win percentage lower than normal at 15 per cent (19.8 per cent).

The current year for gaming has started strongly, they add, with the drop sharply up on the comparable period. The "luck" factor so far has also returned to the normal level—marginally over 20 per cent.

In Australia the group's hotel/casinos in Darwin and Alice Springs have been undergoing

extensive refurbishment and alterations during the year, which are not yet completed. The directors anticipate that a new Salon Prive at Darwin will be opening early in 1986 and the rest of the upgrading will be completed by mid-1986.

The pre-tax result was struck after interest charges and overheads for the holding company, which fell by £38,000 to £968,000. Tax took £6.31m (£3.35m), leaving net profits of £13.34m (£8.69m), and retained earnings of £6.22m against £5.13m.

## comment

With Aspinall's Curzon Street premises in for the first full year the drop was heavily ahead of the previous year's figure, but the luck factor shifted in favour of the punters and after the sharp rise in operating costs, the profits from the gaming side came in a little below some expectations. However, the finance side more than compensated for the shortfall and with total pre-tax profits a little above forecasts, the shares put on 5p to 161p. In the current year the luck factor is swinging back in favour of the house, suggesting a strong increase in profits from the gaming tables. The investment operations are subject to the vagaries of exchange and interest rates but some further increase here, together with a modest initial input from the Australian operations, might suggest about £18.5m for this year, putting the shares on a prospective p/e ratio of 7 after a 34p rise in the year.

## NCB claims Drayton victory

The National Coal Board Pension Fund yesterday claimed victory in its £164.5m takeover bid for Drayton Premier Investment Trust after increasing its control over voting rights in Drayton to 50.1 per cent through share purchases.

On Wednesday the fund increased its stake in Drayton's ordinary shares from 23 per cent to 28 per cent through share purchases and raised the value of its offer from 500p a share to 521p. Yesterday it bought more than 2m ordinary shares at 521p, together with Drayton 2.5 per cent preference stock units and 3.5 per cent (formerly 5 per cent) preference stock units. These, plus acceptances to date, took it to 50.1 per cent of the voting rights.

Drayton said yesterday that its estimated net asset value at close of business on December 17 was 575.6 per ordinary share and the NCB offer represented a discount of more than 54p, or more than 9 per cent, on this.

## Britannia Arrow

Mr Robert Maxwell, the publisher of Mirror Group newspapers, has increased his holding of Britannia Arrow to 7.4 per cent from 6.5 per cent.

Guinness Peat, which is mounting a £284m takeover bid for Britannia, yesterday circulated the terms of the improved offer announced on Monday which increased the bid per share by 10p to 155.5p. Britannia has rejected the bid as inadequate, and Mr Maxwell has made no comment.

## Grattan

Grattan, the Bradford-based mail order company, has acquired Scottrade, the direct response mail order company, for £500,000, satisfied by the allotment to the vendors of 200,000 stock units. Scottrade was 75 per cent privately owned, with a 25 per cent stake held by Ordinance International.

J. Rothschild Holdings, the investment company headed by Mr Jacob Rothschild, bought 1.5m shares in Charterhouse Petroleum on Wednesday, increasing its stake to 8.37 per cent (12.012m shares). The move came just 24 hours after Charterhouse announced proposals for an agreed merger with Petrofina.

## Fifth acquisition for Thermal Scientific

Thermal Scientific, the fast-growing, quoted thermal technology company, yesterday announced that it was to buy Wentgate Engineers Holdings, an unquoted designer and manufacturer of electric vacuum furnaces and electron beam welders.

The initial purchase consideration of £125m will be met through the issue of 356,872 Thermal shares, 200,000 of which are being placed on behalf of the vendors for cash. Up to £1m more will be paid according to Wentgate's performance. The acquisition is Thermal's fifth since its formation in 1983. It said yesterday that Wentgate's activities and range of equipment fitted in with those of Thermal, which acquired in September 1984. Wentgate's major markets are in the aerospace, instrument, nuclear and automotive sectors and 40 per cent of its sales are overseas.

Last week Thermal reported a three-fold increase in profits for the half-year to September of £1.1m.

## Slough Estates in £15m portfolio acquisition

Slough Estates, the UK's largest developer of industrial property, is paying £15m to acquire Helmlace, the private property company owned by Helmlace & Co, New York investment bankers.

Slough is paying for the company with the issue of 10.4m new ordinary shares. Rowe & Fildes and Sheppard and Chase, on behalf of Allen, will place all the shares at 144.5p each. Helmlace was only established in May this year as a property investment vehicle but Allen has now apparently decided to withdraw from the UK market. The company's principal property assets include four developments in the south of England and five investment properties which are located around the country.

Further details of the newly acquired portfolio will be issued after Christmas.

## Speyhawk buys property with £18m share issue

Speyhawk, the property development and investment group, is buying a portfolio of mixed properties from Airways Pension Fund Trustees for £18.12m, writes Michael Cassell.

The company, which yesterday also announced a fall in turnover and pre-tax profits for 1985, is paying for the British Airways' property package via the issue of 5.88m new ordinary shares and £4m convertible preference shares 1986.

A total of 3.8m of the new shares are being conditionally placed, at 250p a share, with institutional shareholders by Barclays Merchant Bank, in conjunction with Quilter, stockbrokers. Barclays is to provide Speyhawk shareholders with the right to purchase up to 1.56m (40.9 per cent) of the placed shares at the 250p placing price.

Speyhawk says the new portfolio will be of major benefit to the company. There is considerable scope to enhance the rental and capital value of the properties through development and trading, while the company's capital base and asset backing will be significantly increased.

The portfolio has a current open market value of £18.45m and includes 3M House, Brecknell, a 106,500 sq ft freehold office building let to 3M UK at a current annual rental of £1.03m. The freehold has been valued at £11.15m.

Also included in the acquisition is Hanworth Air Park, Feltham, near Heathrow airport, a series of outdated industrial buildings on a 14-acre site providing a current rental income of £238,500 and offering wide scope for total redevelopment. The third element of the portfolio is Dorcan House, a 72,000 sq ft freehold office building in Swindon, currently producing £250,000 annual rent.

Pre-tax profits for Speyhawk in the year ending September 30 1985 totalled £3.36m against £3.76m previously, on turnover down from £44.5m to £41.6m. There is a final dividend of 7p (6.4p) making 9.52p (8.4p) for the year.

Speyhawk says the reduction in profits was principally due to the postponement in the completion of contracts on three major projects which should all now be completed in the New Year. The profits arising will be reflected in results for the current half-year.

## Ward White £7.5m sale of Maynard confectionery

Ward White, the fast growing retail group headed by Philip Birch, is selling the confectionery manufacturing interests of the Maynard group for £7.5m to Trebor.

The sale has been anticipated for months following the success of £18m takeover of Maynards last October. Mr Birch made it clear then that his principal interest was the toy retailing operation and that confectionery and the chain of newsagents would be unlikely to remain within the group.

At August 31 the assets Ward

## Southend Stadium unveils full redevelopment plans

BY MICHAEL CASSELL, PROPERTY CORRESPONDENT

Southend Stadium, the property company and greyhound racing operator, has revealed plans for the complete redevelopment of its racing stadium.

Last week the company announced that Larches Securities, a wholly-owned subsidiary of Shop Construction Holdings, the privately-owned property group, had purchased 25.5 per cent. In the wake of the deal, Mr Malcolm Dugan, chairman of Larches, joined the board.

The stadium complex is due to stage its last race meeting at the end of this month and there is already outline planning consent for the development of a retail warehousing centre on the 9.5 acre site.

Southend Stadium said yesterday that it had now entered into a development agreement with Sheraton UK, a subsidiary of

Sheraton Securities International, the property development and investment group headed by Mr Peter Taylor.

The proposed development plan makes provision for the construction of over 100,000 sq ft of retail warehousing units, a restaurant and car parking. A small part of the site will be used for housing development. If requested, Sheraton will secure finance for the development and negotiate with prospective tenants.

A statement from Southend added: "Apart from the residential housing, the site is not being developed with a view to its sale in the near future, but rather as an investment which it is hoped will yield a far greater return upon the market value of the site than has been the case in recent years."

Peter J. Carney President

This announcement appears as a matter of record only.

## Chemring financing package greeted with enthusiasm

Chemring's shares yesterday opened 87p above the November suspension price as dealings resumed at 620p following publication of full details of the proposed £14m takeover of Pains-Wessers, a move that will double the group's size.

The initial burst of enthusiasm quickly faded but the price still closed at 590p, compared to a price of 480p for a 50p vendor package. There is also a 28.4m rights issue.

Along with the acquisition details came the full year figures for Chemring's year to September 30. Pre-tax profits climbed by 12.4 per cent from £1.45m to £1.63m and a 5.5 per cent sales improvement to £2.28m.

Earnings per share increased by 8.7p to 48.5p from which a higher dividend of 13.5p against 10p is being paid.

The acquisition of Pains from Allegheny International brings together two complementary operations supplying chain saw material to distract radar-guided missiles and infrared decoys (the Pains pair) which are designed to mislead heat-seeking missiles.

The immediate benefit from the deal is a cut of around 40.5m in the overheads of Pains has been carrying from its previous parent company. Beyond that the real advantages of bringing together two related activities will be in better marketing, especially as Pains has wider overseas contacts.

Mr Victor Prior, of Pains, will become chief executive of the enlarged group.

Following the Ministry of Defence's policy towards greater

competition Pains believes it will be able to use its production areas which is already cleared to handle hazardous materials—to increase workload with the MoD. It has already picked up a contract for mortar bomb filling, and expects others to follow.

The rights issue is of four new preferred ordinary shares for each ordinary share currently held at 100p each. The shares which carry a dividend of 6p per year are convertible from 1987 onwards at the equivalent of 520p a share. The vendor placing is of 1.04m ordinary at 480p a share.

The rights have been underwritten by Kleinwort Benson. Brokers are de Zoete & Beyer and Springers Vickers.

## comment

The marriage of Chemring with Pains-Wessers has an inevitable quality about it and undoubtedly both sides have been eager to get to the altar but parental permission was not forthcoming. As weaponry becomes more sophisticated so does the business of trying to confuse "intelligent" missiles. Putting chaff and flares under one roof is a natural development and this is one acquisition where the dreadful word "synergy" does have some meaning, especially in marketing terms. Taking 24 months of Pains into this year suggests pre-tax profits of £3.2m and fully diluted eps of 53p. Next year those figures could rise to 54.4m and 60p—10 times the current share price. The shares were frothy yesterday and may slip back—but not far.

# Why the Merrill Lynch Taxable Bond Indices have so many followers. (Including the competition.)

The Merrill Lynch Taxable Bond Indices offer something no other indices have: the experience and resources of Merrill Lynch.

The people behind the Merrill Lynch Taxable Bond Indices are the same ones most of the industry already relies on for accurate bond pricing and research: the fixed-income specialists at Merrill Lynch.

Because they understand so well the diversity of the bond markets, Merrill Lynch's Indices offer the finest detail of any index—some 200 discrete and useful subsets, available monthly, including mortgage-backed, zeros and high yield securities. *The Merrill Lynch Indices are the only ones to update corporate, treasury and agency prices and returns daily.*

But these Indices are more than an analytical tool; they are also strategically useful for creating *fixed-income index funds*. Merrill Lynch has committed major resources and capital, so that institutional investors who have been following the Indices can now actually implement this portfolio strategy.

There's more to bond indexing than running numbers through a mainframe; it's only as good as the people who do it. And no one knows the bond markets like the people at Merrill Lynch.

To find out more, talk to one of them. Call Daniel E. Kornstein, Vice President, Fixed Income Research, at 212-637-1662; or Carl A. Antenucci, Group Manager, Structured Investments Group, at 212-637-0806.

More resources, better solutions.  
They make Merrill Lynch people a breed apart.

 **Merrill Lynch**

## UK COMPANY NEWS

Stainless Metalcraft  
increases profits by 33%

Stainless Metalcraft, the USM quoted maker of precision equipment and components, has increased taxable profits by 33 per cent to £602,920 in the year to August 31 1985.

Turnover improved from £3.86m to £4.79m, reflecting a strong increase in the medical sector, according to Mr J. Redgrave, the outgoing chairman, who added that the significant improvement in profitability was affected by the completion of past loss-making contracts during the first half of the year.

The shares were marked up 2p to 80p last night, but still well short of the 120p issue price in May 1983.

The final dividend is held at 2.2p for an unchanged total of 4.2p. Earnings per share came to 6.9p, down from 9.2p, after a tax charge of £5,418, compared with a credit of £5,418 last time.

Along with the results for the year, the company also announces several board changes. The chair-

man says that he has been forced by the terms of his contract with another company to give up the chairmanship of Stainless Metalcraft, "with considerable sadness." He is replaced by Mr Christopher Childs. Two non-executive directors have resigned, with one of the positions filled by Mr J. North, a senior partner in the company's solicitors.

Mr Redgrave also says that with regard to prospects that the company's order book and the current year's opening month's trading and profitability support the management's optimistic view.

**comment**  
Stainless Metalcraft has had an unhappy history since coming to the USM in May 1983. It started on the wrong foot when a statement described its offer for sale as heavily overvalued; it turned out to have been only marginally so. The following December it announced results showing that it had beaten its

profits forecast for the year to August 1983, and chairman Mr Simon Knott said he viewed the future with confidence; six months later the interim figures showed a slump in profits from £508,000 to £222,000, and Mr Knott left. The following December the annual report, which showed full-year profits halved to £452,000, discussed the boardroom moves that had taken place and said no more were contemplated; now we learn that there have been further boardroom changes and that the second chairman is to be replaced by the third in the company's short history on the USM.

Yesterday's pre-tax figure is heading in the right direction but earnings have taken a nose-dive because of the absence last year of capital allowances. The new chairman believes this year's prospects to be quite sparkling. Perhaps they are, but it is going to take more than one rosy set of figures to bridge this company's credibility gap.

Hawtin  
little  
changed at  
year-end

THE SECOND six months for Hawtin followed the pattern of the opening half and for the full year the group saw its profits before tax fall from £1.16m to £1.1m.

The manufacturing companies maintained their share of the market but as the new premises of Stewart-Singham Fabrics were not completed before the year-end the improvement in profitability did not materialise.

However, the transfer to two new factories is nearing completion and the benefits of operating from modern premises by both Stewart-Singham and Gul Wet Sits should soon be realised. Turnover for the 12 months to September 30 improved from £20.09m to £22.64m—the group manufactures and distributes protective clothing and safety equipment. Earnings amounted to 1.24p (1.6p). The dividend is held at 0.375p net.

Fluctuations in exchange rates affected margins in protective clothing and resulted in correspondingly reduced profits. Merger accounting was applied regarding the acquisition of Manor Brick Holdings and that company's results were included for 18 months in 1985 and for 12 months in 1984.

**ERF back in black at midway with £335,000**

A swing back into profit is reported by ERF (Holdings), manufacturer of heavy commercial vehicles and plastics, for the 26 weeks to September 28 1985. Pre-tax profits came out at £335,000 against losses of £1.09m in the corresponding period last year. Year-end losses totalled £336,000.

While group turnover was only marginally higher at £34.19m (£33.5m), trading profits increased by 62 per cent from £278,000, before exchange losses of £1.16m, to £1.1m. Interest charges still continue at a high level, rising from £907,000 to £969,000. No tax is again payable, and there is no interim dividend.

The directors say the commercial vehicle market was quite buoyant in the first trading quarter of 1985, but dipped in the second. The company is now seeing some upturn in sales, and the last quarter ending in March should give a reasonably satisfactory result for the year as a whole.

As at September 28, preference dividend arrears had increased from £179,000 to £272,000. Stated earnings per share were 3.98p against losses of 10.06p for the year ended March 31.

Relocation  
costs hit  
Jacksons

LOWER PRE-TAX profits of £205,000 are announced by Jacksons Bazaar End for the half year to October 12 1985, against £229,000 previously. This fall is attributed to the balance of relocation costs for the move to new premises at High Wycombe.

Turnover for the group, which moulds components for the automotive, shoe and furniture industries, improved by £357,000 to £2.57m. Its rental income was maintained at £116,000, giving a 21 per cent improvement in trading profits to £345,000 (£294,000).

A same again 2p interim dividend is being paid. The total for 1984-85 was 6p when pre-tax profits reached £325,000. After tax of £52,000 (£103,000), net profits emerged little changed at £123,000 (£126,000) for earnings per share of 5.9p (5.9p).

**Batleys profit down**  
Start up costs for its Manchester warehouse depressed first half profits of Batleys of Yorkshire, Huddersfield-based cash and carry wholesaler.

Turnover for the six months to October 26 1985 rose from £84.59m to £95.27m, but pre-tax figures dropped from £702,000 to £507,000. An interim dividend of 0.5p is being paid, compared with 0.2p previously, adjusted for the scrip issue. Earnings per share for the period fell from 2.97p to 2.7p.

Interim progress made  
by Bennett & Fountain

A PRE-TAX profit of £402,000 is reported by Bennett & Fountain Group in the six months to September 30 1985. There are no comparable figures for the period, and the group has decided to change its year end to June 30.

The electrical goods wholesaler and retailer, which came to the USM in January, says that on a direct comparison with the same period of 1984, turnover at £3.78m is up 15 per cent. Earnings per share for the period were 0.4p.

Considerable progress has been made in both divisions in the first half, says the group.

As previously, no dividend is being paid. The group stated in its last annual results that it expects to recommend a final dividend for 1985-86.

**Good year for Widney**  
Francis and Lewis, which was acquired at the end of January, is included in the first trading quarter of 1985. Turnover and profitability of the business, which makes and sells towers and masts, mainly for broadcasting and telecommunications use, both matched expectations.

The group is disappointed by overall sales in the first quarter of the present financial year. But it says that the present level of orders and inquiries indicates that they will improve sufficiently in 1986 to make up the shortfall.

## COMPANY NEWS IN BRIEF

**NESCO INVESTMENTS** has announced lower pre-tax profits of £208,000 (£363,000) for the six months to end-September 1985, on turnover £286,000 ahead at £2.51m. The interim dividend is maintained at 1p net. Negotiations are at an advanced stage to sell its 51 per cent interest in the Nigerian Electricity Supply Corporation to Nigerian interests.

**GIBSON LYONS GROUP**, manufacturer and supplier of printing inks and printers' sundries, reports pre-tax profits up from £202,000 to £218,000 in its initial figures since recently joining the USM. The interim dividend for the six months to September 30 1985 is 1.2p as indicated in the prospectus. Group turnover was up from £1.48m to £1.59m and this included exports of £63,000

(£58,000). Tax was £95,000 against £86,000. **STERLING INDUSTRIES**, light engineering group of Caverley Trust, has lifted pre-tax profits from £252,000 to £394,000 in the six months ended September 1985. Turnover rose to £3.88m (£3.13m). The interim dividend is stepped up to 0.75p against 0.5p. After tax of £154,000 (£114,000) earnings per 21p share are shown ahead at 2.63p (1.43p).

**RADIANT Metal Finishing**, raised pre-tax profit from £87,000 to £174,000 in the half-year to August 31 1985, including investment income of £130,000 (£121,000). Turnover advanced to £464,000 (£288,000). The interim dividend is being held at 1p on earnings per 121p share of 8.56p (4.63p).

This announcement appears as a matter of record only.

## FT COMMERCIAL LAW REPORTS

## Foreign law defence barred in sherry case

**WILLIAMS & HUMBERT v W & H TRADE MARKS (JERSEY) LTD AND OTHERS**  
RUMASA SA AND OTHERS v MULTINVEST (UK) LTD AND OTHERS

House of Lords (Lord Scarman, Lord Bridge of Harwich, Lord Brandon of Oakbrook, Lord Templeman and Lord Mackay of Clashfern): December 12 1985

WHERE A company is controlled by a foreign state and sued at its jurisdiction for recovery of assets in England, the defendant cannot assert that the action is an attempt to enforce an expropriatory law which ought not to be recognised in England if the relevant law was already in force before the action began, and if the assets would be recoverable not by the state but by the company as a separate legal entity.

The House of Lords so held when dismissing appeals by Williams & Humbert Ltd, the "Jersey company" and others, and Multinvest (UK) Ltd and others, defendants to two related actions commenced at the instigation of the Spanish state, in which they had sought to raise the defence that the proceedings were an attempt to enforce foreign expropriatory laws which ought not to be recognised in England.

In the first action, brought by Williams & Humbert Ltd, the Court of Appeal (FT, April 24 1985) upheld Mr Justice Nourse's decision (FT, January 15 1985) to strike out part of the amended defence.

In the second action, brought by Rumasa SA and its two subsidiary banks, Jerez and Norte, it upheld the judge's refusal to grant leave to amend the defence.

The Jersey company and Multinvest were controlled by Mr Jose Maria Ruiz-Mateos and his family. He was defendant to both actions.

LORD TEMPLEMAN said that Rumasa was a Spanish company. Its shares were formerly held by the Mateos family.

Rumasa controlled Williams and Humbert, an English company carrying on business as a supplier of sherry under the trade mark "Dry Sacks". It also controlled Spanish banking companies, Jerez and Norte.

By a law dated June 29 1983 all shares in Rumasa and its Spanish subsidiaries, including Jerez and Norte, were compulsorily acquired by the Spanish Government and control was vested in the state.

Thus the Spanish Government, now owned and controlled

Rumasa, Jerez and Norte, while Rumasa controlled Williams and Humbert.

The reasons advanced for the compulsory acquisition were that the Rumasa group had embarked on rash speculations which threatened the stability of the Spanish economy.

The Spanish Government alleged that while the Mateos family controlled Williams and Humbert through Rumasa, the Dry Sacks trade-mark was properly diverted to a Jersey company formed for the benefit of the Mateos family. It caused the "trade-mark" action against the Jersey company and the Mateos family, for recovery of the trade-mark and damages.

The Government also alleged that while the Mateos family controlled the Jersey company, it was improperly diverted from Jerez. It caused Rumasa, Jerez and Norte to institute the "banks" action against those said to have been responsible.

The defendants denied impropriety or recklessness. They sought to put forward an alternative defence that Williams and Humbert in the trade marks action, and Rumasa, Jerez and Norte in the banks' action, were not entitled to relief because the proceedings were an attempt to enforce a foreign law which was penal or which otherwise ought not to be enforced, and that it would be contrary to public policy to give the relief sought.

That pleading would be justified if English law abhorred the compulsory acquisition legislation of any other country, or if international law abhorred the compulsory legislation of all countries.

But in fact compulsory acquisition was universally recognised and practised. In the UK the courts were bound to accept and enforce compulsory acquisition authorised by Parliament and to recognise compulsory acquisitions by other governments subject only to limitations for safeguarding human rights.

There was another international rule whereby one state would not enforce the revenue and penal laws of another state. It was doubtful whether the June 29 law was penal for present purposes, but in any event the actions were not for enforcement of Spanish law.

They were for the enforcement of English private law which could be invoked by a plaintiff against any defendant within the jurisdiction and against any property within the jurisdiction.

Mr Justice Nourse rightly observed that the object of the June 29 law "was to acquire ownership and control of Rumasa and the two banks, and indirect

ownership and control of Williams and Humbert. That object has been clearly achieved. Accordingly, there is nothing left to enforce."

An attempt was made to argue that the actions constituted attempts by the Spanish Government to enforce the law directly, by recovering the Dry Sacks trade mark and the \$46m.

That heretofore submission flew in the face of *Salomon* [1897] AC 22, re-affirmed in *EBM v Dreyfus* [1937] 3 All ER 555 where Lord Russell said it was "of supreme importance that the distinction should be clearly marked... between a company's legal entity and the individual shareholders."

If the actions were attempts indirectly to enforce Spanish law to which English courts would not be bound, the practical effect of the Spanish law was to release from liability outside Spain every tortfeasor guilty of inflicting a civil wrong on any company in the Rumasa group, and every contracting party who defaulted in his obligations towards a company in the group.

A submission which produced such anarchic results and which released such wrongdoers from liability must be fatal.

An English court would recognise the compulsory acquisition law of a foreign state, the change of title to property which had come under the control of the foreign state, and the consequences of that change of title, but would decline to consider the merits of compulsory acquisition (see *Abkowitz v Odeon* [1921] 3 KB 532; *Princess Policy Odeon* [1929] 1 KB 718).

In their pleadings the defendants sought to attack the motives of the Spanish legislation, to allege oppression by the government, and to question the bona fides of the administration in connection with enactment of the law.

No English judge could properly entertain such an attack, launched on a friendly state, which would shortly become a fellow member of the European Economic Community.

An English court, by English and international law, must recognise the Spanish law and accept its consequences. The application to strike out the defence in the *Williams & Humbert* case was made pursuant to Order 18 rule 19 of the Rules of the Supreme Court (RSC) which provided that the court might strike out any pleading on the ground that it was frivolous or vexatious.

If an application to strike out involved a prolonged and serious argument the judge should, as a general rule, decline to proceed with the arguments unless he

not only harboured doubts about the soundness of the pleading, but also was satisfied that striking out would obviate the necessity for a trial, or would substantially reduce the burden of preparing for trial or of the trial itself.

In the present case the general rule would seem to require a refusal by the judge to embark on the problems of international law involved, leaving them to be solved at the trial if they became material.

But there were special circumstances which made it right for the judge to make the striking out order. If the pleadings and particulars had not been struck out the defendants would have proceeded to demand discovery before trial and to lead evidence at the trial, thereby embarrassing the court, and designed to support the allegations and insinuations of oppression and bad faith on the part of the Spanish authorities.

Those allegations were irrelevant to the action and were inadmissible as a matter of law and equity, and were rightly disposed of at the first opportunity.

The defendants complained, however, that the application to strike out was misconceived and that it was open to Williams and Humbert to apply under RSC Order 23 rule 3 for the international law problems to be resolved without waiting for trial. That rule provided that the court might order any question arising in a "cause or matter" to be tried before trial of the "cause or matter".

The issue raised on the appeals was more appropriate to be decided under Order 33 rule 3 than under Order 18 rule 19. Nevertheless no harm had been done. The investigation undertaken by the judge under Order 18 rule 19 was no different from that which would have been involved under Order 33 rule 3 and the time involved would have been the same.

The appeals should be dismissed. Lord Scarman, Lord Bridge and Lord Brandon agreed. Lord Mackay gave a concurring judgment.

For the defendants in the trade marks action: Mark Little, QC, Robert Reid, QC and Simon Berry (Denton Hall and Partners).

For the defendants in the banks' action: Mark Little, QC, Robert Reid, QC and W. R. Stewart Smith. *Williams & Humbert v W & H Trade Marks (Jersey) Ltd and others*; *Rumasa SA and others v Multinvest (UK) Ltd and others*. By Rachel Davies, Solicitor.

## COMMODITIES AND AGRICULTURE

## Honduras banana strike spreads

By Tim Coone

A BANANA WORKERS' strike in Northern Honduras is spreading to other sectors and threatening to paralyse the country. About 5,000 dock workers at Honduras's principal port of Puerto Cortes joined the two-week-old strike on Wednesday, stopping all movements through the port. Workers at the country's remaining ports, as well as transport workers, are also threatening to join in to turn the strike into a nationwide stoppage if no advances in negotiations are made soon.

The strike began two weeks ago, when the US-owned Standard Fruit Company, which has some 5,000 hectares of banana plantations in Honduras, began laying off workers in its central workshop and packing plant. Company officials say that high production costs are making their operations in Honduras unprofitable and are trying to cut back in higher paid sectors of the skilled labour force.

Ten thousand workers in the Port of La Ceiba and nearby plantations went on an "indefinite strike" as a result.

The company appears to be in serious difficulties. Officials are unable to explain why production has fallen off in the past year, which union officials say is running at 70 per cent of optimum output. Field investigations are to be carried out "very soon," said a spokesman for the company. However, Sr Humberto Batdomo, one of the union leaders directing the strike claims that the company is deliberately running down its own plantations with the aim of halting production in Honduras altogether and marketing bananas produced only by local growers.

The accusation is denied by the company. Camille James writes from Kingston: In Jamaica meanwhile sugar workers represented by a union affiliated to the major opposition party have gone on strike against a campaign aimed at bringing down the Government.

Opposition parties are threatening widespread industrial action in key sectors of the economy to protest against what they have described as widespread fraud in last week's general election.

## EEC farm policy conflict looms

BY IVO DAWNAY IN BRUSSELS

EEC FARM Ministers yesterday delivered a widely mixed reaction to the European Commission's new policy document for the Common Agricultural Policy (CAP), reflecting the conflicting national views that have long dogged decision-making in the sector.

While the Mediterranean member states called for greater direct grant aid, the northern countries, which produce most products in surplus, were divided over what should be done to cut output.

Britain, the most cost-conscious country, argued strongly for price cuts as its favoured route to control production. And Mr Michael Jopling, its Farm Minister, warned that he would oppose measures that discriminated against the UK either on quality grounds or against larger farmers.

Others, however, welcomed the Commission's plan to limit support for beef and introduce strong quality controls on cereals sold to Community stores. Belgium, in particular, argued for a still tougher policy on quality, using the savings achieved to channel support funds into subsidies on exports of high grade products, dividend and annual profits are.

Moreover, just as the UK regretted the dilution of the tougher proposals mooted in the

original discussion document, Belgium welcomed the changes. For France and Ireland the new paper gave insufficient emphasis to the need to promote exports of farm produce. And the West Germans insisted that there should be no price cuts on these commodities facing measures aimed at encouraging the reduction of output—an opinion that defies the main thrust of the paper's call for lower sales into intervention stores.

The Greeks, alone among the member states, called for limitation of price and output restraints to those countries producing surpluses for their domestic market. This view flies in the face of the "Commonwealth solidarity" principle supporting governing the management of the CAP.

Meanwhile Britain was squaring up over a Common Market battle over an EEC plan to ban the use of hormones for growth promotion in beef cattle.

The Government is threatening European Court action if the rest of the Community tries to force through a decision at talks in Brussels without Mr Jopling's agreement.

Most member states are under strong pressure from environmentalist groups to accept EEC Commission proposals for a complete ban on all growth-promoting hormones implanted into livestock.

## Grain problems expected to alter trade patterns

BY NANCY DUNNE IN WASHINGTON

POOR WEATHER in several wheat producing countries this year is expected to alter trade patterns in the shrinking world market, according to US wheat associates.

The Argentine crop, a victim of excessive rains and flooding, declined about 2.3m tonnes this year, leaving no more than 6m tonnes available for export compared with 8.5m last year. It is reported that Argentina will substitute maize for wheat in its current sales relationship with Brazil. China is also "turning away" from Argentina as a wheat supplier, says Wheat Associates.

Australia is still expected to harvest 16.5m tonnes of wheat, but rain has been frequent and

the quality of the crop may be down-graded. The estimate for Canadian output has been raised by 1.5m tonnes this month, but that crop too is suffering weather damage.

"Considering this year's poor northern European crop, compounded by crop quality deterioration in Australia and Argentina, feed wheat will become a major competitor with coarse grains on the world market," said the organization.

Australia, Canada, the EEC and the US are still expected to push their crop aggressively for the remainder of the year. The quality of some of the foreign wheat may push some of its sales in the US.

## Reagan 'will sign US Farm Bill'

US SECRETARY of Agriculture Mr John Block said yesterday President Reagan intends to sign the five-year farm bill passed by both Houses of Congress, reports Reuters from Washington.

Mr Block said there was a meeting of administration officials on Wednesday, including White House chief of staff Mr Donald Regan, in which some officials argued that the President should veto the bill. Mr Block said he argued for the President to sign the bill, as he feels it has potential for future success.

He said the bill is a major policy shift toward making US agriculture more market-oriented.

US stocks of crude oil fell above the year for American agriculture. He said the bill is a major policy shift toward making US agriculture more market-oriented.

According to the American Petroleum Institute, crude oil stocks at the end of last week stood at 318.5m barrels, almost 30m barrels behind last year's level.

Distillate fuel oil stocks were estimated at 141.3m barrels, more than 12m less than in 1984.

Residual fuel oil, for which demand has been falling, had stocks of 48.8m barrels, slightly above the year for American agriculture. He said the bill is a major policy shift toward making US agriculture more market-oriented.

The International Tin Council yesterday set up an informal group to look at ways of establishing a working party to negotiate with the council's creditors, writes Stefan Wagstyl.

Proposals for a working party, put forward by tin producer countries, have so far found little support from consumer nations.

The informal group could today convene representatives of the banks and metal brokers, who are owed hundreds of millions of pounds by the tin council. The council is meanwhile expected to renew its export controls, which expire at the end of this month.

The authorities of the London Metal Exchange met today to decide whether to continue with the suspension of tin trading, in force since October 24. Traders have been expected to return to the market to stay closed and any decision to fix a day for re-opening to be postponed until the New Year.

## LONDON MARKETS

THE UPSURGE in the coffee futures market continued yesterday as concerns about the Brazilian crop situation following this year's long drought remained uppermost in dealers' minds. The March position ended the day 57 1/2 up at 22.525 a tonne, the highest second position close for more than eight years.

The March price has risen 237.50 this week alone. In the absence of fresh fundamental news dealers put the rise down to further speculative buying in London and New York ahead of an official Brazilian crop estimate due out within days. In contrast the sugar futures market fell back heavily, with the May position closing 56.20 lower at \$158.40 a tonne. Physical demand has been slack.

Spot prices for 500,000 tonnes has been overhauling the market for several days and though India received offers at a buying tender yesterday no business was done.

LNME prices supplied by Amalgamated Metal Trading.

US MARKETS

PRECIOUS METALS

reflecting dollar weakness and an overall bullish mood, reports Amalgamated Metal Trading.

Copper advanced from sterling strength which attracted arbitrage buying.

Sugar weakened on technical selling which touched off-loss selling as cash interest remained lacking.

Coffee moved higher on the lack of cash offers from producers.

Cocoa rose on scale-down in futures pricing. Cotton continued to be mixed on the new

winding of old crop and new crop spreads. The grain complex traded mixed with wheat higher on profit-taking linked to export inquiry. The soybean complex traded sharply higher on combined concern over dry conditions in Brazil.

Weathered oil advanced to the daily limit, reflecting good cash interest sparked by the arrival of cold temperatures to the North-Eastern US.

## CURRENCIES, MONEY and CAPITAL MARKETS

## FOREIGN EXCHANGES

## Sterling steady but nervous

Sterling showed mixed changes yesterday in thin trading. Many banks were content to square positions ahead of the year end at least hold back ahead of today's US third quarter GNP flash estimate. With such little volume, any medium sized order tended to move rates in an exaggerated fashion.

The pound appeared to be well bought during the morning and rose to a high of \$1.4270 against the dollar before slipping to \$1.4160. It then picked up once more to finish at \$1.4205, a rise of just 10 points from Wednesday's close. Sterling was virtually unchanged against European currencies except for a growth figure of between 2.5 per cent and 3 per cent is likely to leave the market unmoved so close to Christmas. However a smaller growth figure could prompt a softer dollar despite recent misgivings by some central banks as to the value of a further sharp fall in the dollar's value while a much stronger figure could test central banks simply because of the contrast between their desire to

12 months	\$1.4105
Forward premium and discount apply to the U.S. dollar.	

from 78.0 on Wednesday. There were no new factors to affect trading and sterling retained its soft undertone on oil price fears. The US dollar was confined to a narrow range ahead of today's US GNP flash estimate. A growth figure of between 2.5 per cent and 3 per cent is likely to leave the market unmoved so close to Christmas. However a smaller growth figure could prompt a softer dollar despite recent misgivings by some central banks as to the value of a further sharp fall in the dollar's value while a much stronger figure could test central banks simply because of the contrast between their desire to

## FUTURES AND OPTIONS

## Prices fall

deter a sharp rise in the dollar and a reluctance to see a softer dollar exert more pressure within the EMS.

The dollar closed at DM 2.5160 from DM 2.5175 and ¥202.90 compared with ¥203.10. Against the French franc it rose to FF 7.2255 from FF 7.2125 and SF 2.1150 from SF 2.1135. D-MARK - Trading range against the dollar in 1985 is 2.4510 to 2.5110. November average 2.5025.

Prices of interest rate contracts were generally weaker on the London International Financial Futures Exchange yesterday, but long gilts were higher as traders took profits on bear positions. March long gilts opened at 110-13, slightly above the day's low of 110-12, and closed at 110-20, just below the day's peak of 110-27. The slightly stronger tone of the pound against the dollar helped support the contract. Three-month sterling deposits for March delivery finished at the day's high of 88.39, but only slightly above the opening of 88.38, and below Wednesday's finish of 88.44.

US Treasury bond futures weakened on squaring of positions ahead of today's first estimate of fourth quarter US national product growth. Most forecasts are for growth in the region of 3 per cent, but doubts tended to increase about whether this would prompt an immediate rise in the Federal Reserve's discount rate.

On the other hand if the GNP figure is around 2 per cent, several economists have forecast, a low of 3.5 per cent, but doubts tended to increase about whether this would prompt an immediate rise in the Federal Reserve's discount rate. The adding of temporary reserves to the New York banking system by the Federal Reserve, through overnight system repurchase agreements, came too late to influence the Liffe market.

Jan 13 Jan 23 Jan 24 Feb 3  
\* "New-bone" dealings may take  
place from 9.30 am two business days  
earlier.

London equities maintained their better trend throughout the session yesterday, although there was little hard news to stimulate major investment activity. Some "new-time" buying was noted of both leading and speculative stocks for the three-week trading account beginning on Monday, while sentiment also benefited from the announcement of encouraging corporate results. Grand Metropolitan's preliminary statement was the most important on this score.

Annual profits some £15m above most forecasts coupled with a proposed scrip issue of new shares induced strong support which swept Grand Metropolitan up to 382p before a close of 25 up on balance at 380p. Several lesser-known companies released good trading statements.

However, the main reason for the extended pre-Christmas bounce in values was a scarcity of sellers. Earlier this week a number of professional traders took the view that the market's short-term prospects had diminished and had advised investors to take profits. Some sold short of stock and the market's sudden firmness has exerted a squeeze on these short positions since dealers seem prepared at the moment to go along with the uptrend.

Equity trade from 11.00 am onwards was exceedingly thin but the movement showed no sign of faltering and the FT-SE 100 share index closed 11.9 up for a two-day rise of 23.3 to 1,390.7. Reflecting the ongoing gain in constituent Grand Metropolitan, the FT Ordinary share index jumped 10.3 more to 1,144.9; Gilt edged around 2.4 to 1,390.7. Reflecting the ongoing gain in constituent Grand Metropolitan, the FT Ordinary share index jumped 10.3 more to 1,144.9; Gilt edged around 2.4 to 1,390.7. Reflecting the ongoing gain in constituent Grand Metropolitan, the FT Ordinary share index jumped 10.3 more to 1,144.9; Gilt edged around 2.4 to 1,390.7.

Clearers up again  
Quietly firm trading conditions prevailed in the major clearing banks. NatWest added 10 more at 685p and Barclays put on 6 at 483p, while Lloyds and Midland improved 5 pence to 468p and 495p respectively. Deutsche West Germany's largest bank were again wanted on further consideration of its successful purchase of the Flick

Equities continue Christmas bounce  
Grand Metropolitan good feature

Industrial group, closing another 3 points higher at a record 2243. Among Hire Purchases, Moorgate Mercantile touched a 1985 peak of 42p prior to closing, a fraction dearer on the day and 7 better on the week so far at 40p, amid mounting speculation that Somportex had acquired Dominion International's 11 per cent stake in the company.

Investors showed renewed enthusiasm for insurance. Life issues, dull earlier in the week following the Government's latest pensions proposals, perked up with Legal and General's shares opening at 115p and rose to 122p, while the new all-paid shares started at 5p premium and touched 10p premium before settling at 10p premium.

US electronics concern Leeson staged a quietly successful debut: beginning life at 122p, the price advanced to 125p, after 126p.

Excellent preliminary figures from Grand Metropolitan failed to give an appreciable lift to other leading Breweries, most of which were content to hover around opening levels in extremely subdued trading. Among Regions, Marston hardened a penny to 5p in reply to the increased internal profits and dividend. Suggestions that Scotland's Breweries might be sold to a consortium led by the company's chairman, Sir John Galt, were dismissed. The company's shares were 10p higher at 114p.

ICI continued to edge forward and closed 6 higher at the day's best of 741p. A strong recovery in the 15M-quoted Alkermes firm 8 to 386p in a restricted market, but W. Canning shed 4 to 88p on profit-taking.

The volume of business in

## WORLD STOCK MARKETS

### WALL STREET

## Rate outlook bolsters confidence

CONFIDENCE in the outlook for short-term rates began to recover on Wall Street yesterday after the Federal Reserve gave further aid to money market liquidity, writes Terry Byland in New York.

Stocks edged higher as Treasury-bill rates eased and bond prices rallied from early falls.

At the close the Dow Jones industrial average was up 1.49 at 1,543.92.

The Fed's announcement of another round of overnight system repurchase arrangements, while not unexpected in view of technical pressures in the money markets, helped restore confidence in an early cut in discount rate. However, Wall Street remained cautious ahead of today's announcement of the latest official GNP estimates.

Dr Henry Kaufman, chief economist at Salomon Bros, told analysts that discount rate could be cut before the new year.

Federal funds turned down to 8 per cent following the Fed's intervention and early gains of three points in Treasury bill rates were replaced by falls of five points or so.

Long-dated federal bonds also responded to the Fed's move by replacing losses with small gains, and the stock market brightened in brisk trading.

Doubts over short-term interest rates was revived this week by a slightly lukewarm reception for the Treasury's auction of \$23bn of short-term securities. A further \$9bn in 52-week bills was auctioned at noon yesterday.

The stock market rally appeared to reflect arbitrage between the Standard & Poor's 500 stocks and the futures contract on the S & P index. Across the broader market there was little buying power.

Blue chips remained close to overnight levels and it was again left to the special situations to provide the features of the market.

IBM fared well, edging up 5% to \$153, but recent gains in some other market leaders were trimmed by light profit-taking. Minnesota Mining, which has been strong this week, held on to a 5% gain at \$90, but General Motors eased 5% to \$75 and American Express 5% to \$52.

Stock in Federal National Mortgage Association (Fannie Mae), the quasi-federal mortgage institution, fell \$2 to \$254 in heavy turnover after the board said fourth-quarter profits would be below those for the preceding quarter.

Despite Wall Street's conviction that GAF will have to increase its offer, Union Carbide dipped 5% to \$71 1/4 - still above the boardroom terms for 35 per cent of the equity. GAF also eased, falling 5 1/4 to \$61 1/4 as the arbitrageurs awaited the next move.

Texaco continued to trade heavily,

edging up 5% to \$30 in the wake of a federal court restraining order preventing Pennzoil temporarily from taking its \$11.1bn payment. At \$61 1/4 Pennzoil added 5%.

Airline stocks cooled off behind a fall of 1 1/4 to \$41 1/4 in American, which was downgraded by a Mabon Nugent analyst, who cut his earnings forecasts. The analysts also warned that revenue trends in the airline industry are "softening."

A decision by Cadbury Schweppes of the UK to discontinue a British franchising agreement with PepsiCo and enter into a joint agreement with Coca-Cola covering both soft drink companies attracted attention.

PepsiCo fell 5 1/4 to \$70, while Coca-Cola gained 5 1/4 to \$86 1/4.

The credit markets looked distinctly better after the Fed's intervention but could make little headway before today's GNP announcements from the Commerce Department. The market moved cautiously into the day's auction of 52-week Treasury-bills.

### TOKYO

## Buoyed by a late rally in electricals

BUOYED by a surge in high-priced stocks towards the close, issues rallied slightly in Tokyo yesterday, writes Shigeo Nishiwaki of Jiji Press.

The market remained weak most of the day with buying confined largely to electric power, hidden-asset and high-priced stocks as well as some incentive-based issues. Blue chips, constructions and chemicals lost ground.

The Nikkei average added 12.89 to 13,115.03 on volume of 374.40m shares, up from the previous day's 320.05. Declines outnumbered advances by 473 to 323 with 164 issues unchanged.

In that dull market, Tokyo Electric Power and Mitsubishi Estate were spotlighted, with Nomura Securities and other large brokerage houses buying aggressively. Interest spread later to other electric powers, real estates and hidden-asset stocks such as warehouses and railways.

Tokyo Electric Power drew strength from its entry into the telecommunications service sector and the notion that the stock was priced below the level expected for Nippon Telegraph and Telephone when it is listed next year.

The stock, ranking third among 18 most active issues with 17.07m shares traded, climbed to ¥2,860 at one stage. But it closed ¥80 up at ¥2,850, the same as the previous high recorded on September 30. Kansai Electric Power advanced ¥50 to ¥2,170 in sympathy.

Reflecting the popularity of real-estate stocks, warehouses and railways gained on a wide front. Mitsubishi Warehouse and Transportation added ¥37 to ¥848 and Tokai ¥18 to ¥558.

Most blue chips eased on light selling. NEC firmed ¥20 to ¥1,330 but Hitachi shed ¥5 to ¥765.

Bond prices moved within a narrow range in subdued trading as many investors paused for breath after a heavy bout of buying. An overnight weakening of the US dollar market also depressed the market.

But investors remained bullish about prospects and hunted relatively low-priced bonds. The yield of the benchmark 6.8 per cent government bond due in December 1994 rose slightly to 5.535 per cent from Wednesday's 5.530 per cent.

### HONG KONG

THE pre-holiday lull continued in Hong Kong and yesterday's session was virtually featureless.

The only interest was provided by Wing On Holdings which was suspended at HK\$3.50 before announcing its intention to sell its banking subsidiary.

Hang Seng Bank, rumoured to be the buyer, dropped HK\$1 to HK\$45.50. Hongkong and Shanghai, of which Hang Seng is a subsidiary, ended unchanged at HK\$7.80.

In properties, Cheung Kong lost 20 cents to HK\$20.80 and Sun Hung Kai Properties dropped a similar amount to HK\$12.70.

### SINGAPORE

SCATTERED bargain-hunting helped some shares in Singapore to recover after plummeting on continuous selling pressure earlier in the session.

The Straits Times industrial index dropped 18.71 to 604.15, its lowest level since September 1982.

Singapore Airlines continued to fall touching \$44.2 before closing down 26 cents at \$44. Elsewhere, DBS shed 28 cents to \$54.72, Straits Trading 18 cents to \$52.04 and Tat Lee Bank 15 cents to \$52.05.

### AUSTRALIA

THERE WAS little movement in Sydney as the market began winding down its activities ahead of Christmas and prices ended little changed from the previous session.

The All Ordinaries share index put on 0.4 to 986.4.

BHP was initially pushed higher by renewed speculation that Mr Robert Holmes & Court was about to launch a partial takeover bid for the company. But late profit-taking left BHP 4 cents easier at A\$8.60.

### EUROPE

## Celebrations amid batch of records

CELEBRATIONS and congratulations were the order of the day on the European bourses yesterday as another batch of records was achieved in relatively heavy pre-Christmas trading.

Amsterdam took its cue from growing speculation of possible cuts in domestic interest rates and the ABP-CBS General index gained 4.5 to a record 247.1 with international firms firmly bought.

Unilever managed the best gain of the session with a 1 1/2% advance to Fl 986.80, while gains of Fl 6 apiece were reserved for brewer Heineken at Fl 222.50 and publisher Elsevier at Fl 184.

Insurers were led higher by Amey's Fl 1.70 rise to Fl 83.50.

Bonds were steady in lifeless trading. Another record was set in Zurich despite some concerted profit-taking.

Lindt succumbed to the pressure and lost Sfr 1,000 of its recent dazzling rise to end at Sfr 16,000.

Elsewhere banks were mixed and insurers were steady. Credit Suisse dipped Sfr 5 to Sfr 3.875 and Swiss Bank put on Sfr 1 to Sfr 550. Zurich Insurance managed a Sfr 25 to rise to Sfr 5,775.

Bonds steadied in moderate activity underpinned by bearish sentiment over the likely course of domestic interest rates.

The bulls were let loose in Milan again enabling a record high to be scored although volume of activity began to look vulnerable to pre-Christmas pressures.

Blue chips topped the buy lists again. Fiat climbed to a peak with a 1.27% gain to L5,800 as Olivetti scored a 1.49% rally to L8,750 and Snia managed a respectable enough L81 gain rise to L5,200.

Frankfurt still found something in the Flick soap opera to mull over as the leading participants were rewarded for their efforts.

Daimler took another body blow with a sharp DM 32 drop to DM 1,158 and Deutsche Bank, quite smug at the huge profits likely to accrue from the Flick transition from private to public ownership, rose a further DM 11 to DM 660.

Chemicals eased with BASF marked DM 4.30 cheaper to DM 264.20, while Bayer lost DM 2.20 to DM 266.30.

Among insurers Allianz picked up DM

11 to DM 1,873 while fellow insurer Munich Re fell DM 40 to DM 2,755 after Wednesday's glowing DM 163 surge.

Meanwhile, as expected a working party comprising the heads of West Germany's eight bourses unanimously approved reform proposals made last month. The proposals embrace a pan-German bourse directorate based in Frankfurt.

Uncertainty over the direction of local interest rates took the gloss off the re-

covery in Brussels, although the Belgian Stock Exchange index rose 25.43 to 2,678.38.

Petrofina managed to finish unchanged at Bff 6,490 in particularly heavy volume, while utilities continued to lose ground.

Stockholm made further solid progress largely on the strength of heavy domestic institutional and foreign buying. An easing in interest rate policy also aided sentiment.

Technical profit-taking developed in the recently strong pharmaceutical sector with Astra SKr 10 off at SKr 510.

### LONDON

A BETTER TREND was maintained in London yesterday, although there was little hard news to stimulate major investment activity. The FT ordinary share index added 10.3 to 1,114.9.

Encouraging corporate results from Grand Metropolitan lifted the issue 25p to 390p. Dealings in Westland were resumed following details of the rescue package and it settled at 75p compared with the suspension level of 59p.

Less favourable views on US discount rate trends thwarted business in gilts but longer-dated issues ended slightly higher while index-linked and shorts eased by about 1%.

Chief price changes, Page 35; Details, Page 34; Share information service, Pages 32-33.

### AUSTRIA

## Upheaval prompted by upsurge

AUSTRIA's bourse is introducing several reforms to modernise trading and regulations after the recent sharp increase in activity, writes Patrick Blum in Vienna.

Mr Karl Pale, president of the bourse and chairman of Girozentrale Bank, says shares worth Sch 5.7bn (\$318m) were traded on the bourse in the first 11 months of this year compared with about Sch 1bn in 1984.

Trading is expected to grow more in 1986 as new companies issue shares. To cope with the rise, the bourse authorities are lengthening trading hours by half an hour. From January 7, trading will take place from 11 am until 1 pm local time.

The limit on the movement of share prices on each trading day will be increased from 5 per cent to 10 per cent for new shares during the first week of trading to allow realistic prices to be set. Mr Pale said. Bank officials said discussions were also under way to see whether the new 10 per cent limit could apply to all shares.

The European currency unit (Ecu) will also be added to the bourse's officially quoted currencies.

### CANADA

GOLDS and utilities were the only sectors to display any strength in a mixed Toronto.

Bell Canada traded C\$ higher at C\$41 1/2 while Bell's 52 per cent-owned Northern Telecom edged up C\$ 1/4 to C\$47 1/2.

Altel, which reported an increase in losses for the third quarter, shed C\$ 1/4 to C\$38 1/2.

Montreal tended weaker, with only in-

dustrials recording small gains.

### SOUTH AFRICA

TRADING was quiet on Johannesburg yesterday where golds firmed on the stronger world bullion price.

Food group Juicy Lucy, which was listed yesterday, climbed from its opening price of 50 cents to end up 13 cents at 63 cents.

Elsewhere, De Beers added 30 cents to R15.70.

## Contracts & Tenders

## ALGERIE - الجزائر

### THE PEOPLE'S DEMOCRATIC REPUBLIC OF ALGERIA

MINISTRY FOR ENERGY & CHEMICAL & PETROCHEMICAL INDUSTRIES

NATIONAL OIL EXPLORATION COMPANY

OPEN INVITATION TO TENDER No: 7152/11/MEC

The National Oil Exploration Company is launching a national and international open invitation to tender for the provision of the following equipment:

— Spare parts for BANTAM CRANES

Companies interested in tendering may obtain the specifications on payment of 400 Algerian Dinars from the following address:

ENTREPRISE NATIONALE DES TRAVAUX PUIITS

16 ROUTE DE MEFTAH

OUED SMAR, EL HARRACH — ALGER — ALGERIA

DIRECTION DES APPROVISIONNEMENTS

with effect from the date on which this notice is published.

Offers of which five (05) copies should be prepared must be sent in a double sealed envelope by registered mail to the Secretariat de la Direction Approvisionnement at the above address.

The outer envelope should not bear any mark that might identify the tenderer, or any heading, and should read:

"APPEL A LA CONCURRENCE NATIONAL ET INTERNATIONAL No 7152. 11/MEC CONFIDENTIAL A NE PAS OUVRIR."

Tenders must arrive 45 days after the first publication of this notice

Selection will be made 180 days after the closing date of this invitation to tender.

## SYRIAN ARAB REPUBLIC

ETABLISSEMENT PUBLIC DES EAUX DE RIGE

DAMASCUS (SYRIA)

CALL FOR BID ANNOUNCEMENT No. 25

Establishment Public des Eaux de Rige (EPR), 81 Nasser Street, invites

subcontractors to submit sealed bids for the supply of 5,000 domestic

water meters of 1/2 inch diameter from 1/2 inch to 2 inch, together with their

accessories and any spare parts that EPR should find necessary.

— Bid Bond: \$50,000 (FIFTY THOUSAND) SYRIAN POUNDS

— Performance Bond: 10 PER CENT of awarded contract cost

— Validity period of the bid: 90 (NINETY) days from the date of bid

— Delivery period: 3 (THREE) months from the date of payment of the

acceptance letter of contract

— Daily Delay Penalty: 0.1% (ONE PER THOUSAND)

— Price: Unit and total prices are to be quoted FOB shipping port, and

should be acceptable to the EPR. The total shipping cost up to Latakia, and

the cost of unloading at the EPR warehouse, shall be included in the bid.

— Bidder shall submit the following samples of those water meters pro-

posed for sample of meter type, size and material (1/2 inch, 1 inch, 1 1/2 inch,

2 inch) and the total number of meters to be supplied. The samples shall

be submitted together with the bid, or within ten days before the

deadline of this call for bids.

— Prospective bidders may submit their bids
